BOARD OF TRUSTEES.

(State Board of Agriculture).

S. L. PATTERSON, *President ex officio*, Raleigh.

T. K. BRUNER, *Secretary ex officio*, Raleigh.

JOHN M. FOREHAND, Rockyhook, First District.

J. B. STOKES, Windsor, Second District.

WM. DUNN, New Bern, Third District.

C. N. ALLEN, Auburn, Fourth District.

R. W. SCOTT, Melville, Fifth District.

A. T. MCCALLUM, Red Springs, Sixth District.

J. P. McRAE, Laurinburg, Seventh District.

R. L. DOUGHTON, Laurel Springs, Eighth District.

S. T. WILFONG, Newton, Ninth District.

A. CANNON, Horse Shoe, Tenth District.

BOARD OF VISITORS.

W. S. PRIMROSE, *President*, Raleigh.

R. L. SMITH, *Secretary*, Albemarle.

D. A. TOMPKINS, Charlotte.

FRANK WOOD, Edenton.

E. M. KOONCE, Jacksonville.

W. H. RAGAN, High Point.

DAVID CLARK, Charlotte.

W. J. PEELE, Raleigh.

J. FRANK RAY, Franklin.

CHARLES W. GOLD, Wilson.

S. L. PATTERSON, Commissioner of Agriculture, *ex officio*.

GEORGE T. WINSTON, President of the College, *ex officio*.

FACULTY.

GEORGE TAYLOE WINSTON, A.M., LL.D., President and Professor of Political Economy.

WILLIAM ALPHONSO WITHERS, A.M., Professor of Chemistry.

DANIEL HARVEY HILL, A.M., Professor of English.

WALLACE CARL RIDDICK, A.B., C.E., Professor of Civil Engineering and Mathematics.

FREDERICK ELISHA PHELPS, Captain U. S. Army (retired), Professor of Military Science and Tactics.

HENRY MERRYMAN WILSON, A.B., Professor of Textile Industry.

CHARLES WILLIAM BURKETT, M.Sc., Ph.D., Professor of Agriculture.

THOMAS MURRITT DICK, U. S. N., Professor of Mechanical Engineering.

TAIT BUTLER, V.S., Professor of Veterinary Science.

FRANK LINCOLN STEVENS, M.S., Ph.D., Professor of Botany and Vegetable Pathology.

ELLERY BURTON PAINE, M.S., Professor of Physics and Electrical Engineering.

BENJAMIN WESLEY KILGORE, M.S., Lecturer on Soils and Fertilizers.

H. HAROLD HUME, B.Agr., M.S., Lecturer on Horticulture.

ROBERT E. LEE YATES, A.M., Assistant Professor of Mathematics.

CHALMER KIRK McCLELLAND, M.S., Assistant Professor of Agriculture.

CHARLES BENJAMIN PARK, Superintendent of Shops.

THOMAS NELSON, Instructor in Weaving and Designing.

VIRGIL WILLIAM BRAGG, Instructor in Wood-working.

FRANKLIN SHERMAN, B.S.A., Instructor in Entomology.

JOHN CHESTER KENDALL, B.S., Instructor in Dairying.

CARROLL LAMB MANN, B.S., Instructor in Mathematics.

PINCKNEY GUSTAVE DEAL, Instructor in Forge Shop.

THOMAS SIMEON LANG, B.S., C.E., Instructor in Civil Engineering.

GEORGE SUMMEY, JR., Ph.D., Instructor in English.

WINFRED MORSE ADAMS, B.S., Instructor in Electrical Engineering.

GUY ALEXANDER ROBERTS, B.S., D.V.S., Instructor in Zoology and Anatomy.

ALBERT ADAMS HASKELL, B.S., Instructor in Organic Chemistry and Dyeing.

HARLLEE MacCALL, Instructor in Mathematics.

OLIVER MAX GARDNER, B.S., Instructor in Inorganic Chemistry.

CHARLES FREDERICK von HERRMANN, Instructor in Meteorology.

GEORGE McPHAIL SMITH, B.S., Ph.D., Instructor in Analytical Chemistry and Metallurgy.

ROYAL LINFIELD WALES, B.S., Instructor in Mechanical Engineering.

CHARLES WALKER, Ph.D., Instructor in Chemistry.

ALFRED DE ST. AMANT, B.S., Instructor in Drawing.

RANDOLPH FITZHUGH MASON, B.A., Instructor in English.

GORDON MANSIR BENTLEY, B.S.A., M.A., Assistant in Entomology.

OTHER OFFICERS.

ARTHUR FINN BOWEN, Bursar.

FREDERICK ERASTUS SLOAN, B.S., Registrar.

Miss CAROLINE BALDWIN SHERMAN, Librarian.

BENJAMIN SMITH SKINNER, Farm Superintendent and Steward.

JAMES RUFUS ROGERS, A.B., M.D., Physician.

WILLIAM SIMMS KIENHOLZ, B.S., Athletic Director.

MRS. DAISY LEWIS, Hospital Matron.

AGRICULTURAL EXPERIMENT STATION DEPARTMENT.

GEORGE TAYLOE WINSTON, A.M., LL.D., President.

BENJAMIN WESLEY KILGORE, M.S., Director.

WILLIAM ALPHONSO WITHERS, A.M., Chemist.

WILBUR FISK MASSEY, C.E., Horticulturist.

CHARLES WILLIAM BURKETT, M.Sc., Ph.D., Agriculturist.

TAIT BUTLER, V.S., Veterinarian.

FRANK LINCOLN STEVENS, M.S., Ph.D., Biologist.

FRANKLIN SHERMAN, JR., B.S. Agr., Entomologist.

JOHN STRAUCHON JEFFREY, Poultryman.

CHARLES WALKER, Ph.D., Assistant Chemist.

JOHN CHESTER KENDALL, B.S., Assistant, Dairy Husbandry.

BENJAMIN FRANKLIN WALTON, B.S., Asst., Field Experiments.

ARTHUR FINN BOWEN, Bursar.

MILITARY ORGANIZATION.

CAPTAIN FREDERICK E. PHELPS, U. S. Army (retired),
Commandant.

Staff.

W. M. CHAMBERS, Major.

S. D. WALL, Captain and Adjutant.

S. GRAYDON, Captain and Quartermaster.

W. G. KNOX, Sergeant-Major.

W. S. TOMLINSON, Quartermaster Sergeant.

T. M. LYKES, Color Sergeant.

Band.

E. T. ROBERSON, Instructor.

H. B. CARTWRIGHT, Captain.

J. A. PARK, First Lieutenant.

H. M. LILY, Second Lieutenant.
J. G. HARDISON, First Sergeant.
W. C. PIVER, Second Sergeant.
T. J. OGBURN, Chief Trumpeter.
R. H. HARPER, Drum Major and Captain.

Company A.

O. L. BAGLEY, Captain.
F. W. HADLEY, First Lieutenant.
W. G. FINCH, Second Lieutenant.
S. H. CLARKE, First Sergeant.
D. A. COX, Second Sergeant.
L. MOORE, Third Sergeant.
B. B. EDGERTON, Fourth Sergeant.
J. B. LYNCH, First Corporal.
W. B. TRUITT, Second Corporal.
G. R. HARDESTY, Third Corporal.
B. B. EVERETT, Fourth Corporal.

Company D.

L. M. HOFFMAN, Captain.
S. N. KNOX, First Lieutenant.
A. C. WILKINSON, Second Lieutenant.
L. T. WINSTON, First Sergeant.
J. D. CLARK, Second Sergeant.
W. B. MOORMAN, Third Sergeant.
S. O. PERKINS, Fourth Sergeant.
J. O. SHUFORD, First Corporal.
A. C. JONES, Second Corporal.
A. H. BORDEN, Third Corporal.
G. F. HINSHAW, Fourth Corporal.

Company B.

E. G. PORTER, JR., Captain.

G. G. LYNCH, First Lieutenant.

H. F. CHREITZBERG, JR., Second Lieutenant.

R. H. TILLMAN, First Sergeant.

J. H. HANSELMAN, Second Sergeant.

L. L. VAUGHAN, Third Sergeant.

PETER VALEAR, Fourth Sergeant.

L. J. SCHWAB, First Corporal.

F. T. MILLER, Second Corporal.

J. L. HEMPHILL, Third Corporal.

P. W. HARDIE, Fourth Corporal.

Company C.

J. D. SPINKS, Captain.

W. J. WALKER, First Lieutenant.

L. A. MURR, Second Lieutenant.

D. W. ROBERTSON, First Sergeant.

J. G. MORRISON, Second Sergeant.

G. P. ASBURY, Third Sergeant.

A. B. PIVER, Fourth Sergeant.

E. N. PEGRAM, First Corporal.

C. E. STANCILL, Second Corporal.

L. B. WHITEHURST, Third Corporal.

E. F. MEADOR, Fourth Corporal.

Company E.

J. H. PEIRCE, Captain.

L. G. LYKES, First Lieutenant.

W. W. WATT, Second Lieutenant.

C. W. HODGES, First Sergeant.

D. M. CLARK, Second Sergeant.
J. W. CLARK, Third Sergeant.
M. H. CHESBRO, Fourth Sergeant.
R. H. CARTER, First Corporal.
H. S. MONTAGUE, Second Corporal.
R. H. SMITH, Third Corporal.
W. C. STAPLES, Fourth Corporal.

Company F.

A. T. KENYON, Captain.
S. M. VIELE, First Lieutenant.
J. R. SMITH, Second Lieutenant.
W. F. BROCK, First Sergeant.
A. W. GREGORY, Second Sergeant.
J. P. LOVILL, Third Sergeant.
J. E. MOORE, Fourth Sergeant.
J. L. FERGUSON, First Corporal.
L. F. CARLETON, Second Corporal.
C. S. TATE, Third Corporal.
J. L. SMITH, Fourth Corporal.

GENERAL INFORMATION.

The North Carolina College of Agriculture and Mechanic Arts owes its existence to the combined liberality of the United States Government and of R. S. Pullen, of Raleigh, together with the patriotic efforts of a few far-sighted men who saw that in the industrial life of North Carolina the time had come when trained and educated leaders were necessary. The first act of the General Assembly of this State in relation to the College was ratified in 1885, the bill which afterwards became a law, having been introduced by A. Leazar, Esq. The Congress of the United States in 1862 passed a bill, introduced by Senator Justin S. Morrill, of Vermont, giving to each State public lands "for the endowment, support and maintenance of at least one college, whose leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life."

The income from this grant, amounting to \$7,500 annually, was appropriated in 1887 by the Legislature of the State for the establishment and yearly maintenance of this College. Sufficient land for the College site and farm was given by the late R. S. Pullen. The College was formally opened for students October 1, 1889.

Additional funds were provided afterwards by the National Congress to aid in the support of the College and of the State Agricultural Experiment Station, which is now a department of the College.

The College is beautifully located on the extension of Hillsboro street in the western suburbs of Raleigh, a mile and a quarter from the State Capitol. The site is suitable in all respects.

There is an abundant supply of water from twelve deep wells. The water is analyzed, both chemically and bacteriologically, at regular periods.

The College now owns six hundred acres of land and sixteen buildings, and its teaching force consists of thirty-six specialists. Its laboratories, drawing-rooms and work-shops are well equipped. Its library contains four thousand volumes, and its reading-room is well supplied with literary and technical journals and newspapers.

BUILDINGS.

The Main Building is of brick, with brownstone trimmings, and is one hundred and seventy by sixty-four feet; part four stories in height and the remainder two. The lower floors contain the offices of the President and the Bursar, several recitation-rooms, chemical and physical laboratories and the armory. The upper stories are occupied by students.

In this, as in other buildings, every precaution has been taken to secure good sanitation. The rooms are well lighted, well ventilated and conveniently arranged.

The Mechanical Engineering Building is a plain, substantial two-story brick building, with large annex. It contains the drawing-rooms, recitation-rooms and shops of the department.

Primrose Hall is a two-story brick building, which has attached a fine range of glass structures. The lower floor is occupied by the horticultural and veterinary laboratories. The upper floor contains a large lecture-room and botanical laboratory. The plant-houses are five in number and are immediately accessible from the lecture-rooms and laboratories.

The Textile Building is a two-story brick building one hundred and twenty-five by seventy-five feet, with a basement. Its construction is similar to a cotton mill, being an illustration of standard construction in this class of buildings. The basement contains the dyeing department, the first floor the looms and warp preparation machinery, and the second floor the carding and spinning machinery.

Pullen Hall.—In honor of the late R. Stanhope Pullen, the greatest benefactor of the College, the large new building recently finished has been called Pullen Hall. The basement of this building is used as a dining-room and seats five hundred students. The first story is used for library, reading-room and lecture-rooms. The second story serves as the College auditorium. This room is commodious, comfortable and well lighted.

The Agricultural Hall is a three-story buff press-brick building with granite trimmings and is 208 by 74 feet. The lower or basement floor contains the class-rooms and laboratories for work in the Department of Animal Husbandry and Dairying. Ample provision is made for butter-making, stock judging, farm butchering and cold-storage accommodations for the products.

The second floor contains the offices of the department, class-rooms for animal husbandry and agronomy, and laboratories for soil physics and agricultural machinery.

On the top floor are the rooms devoted to botany and vegetable pathology, zoology, physiology, and veterinary medicine. There are well-equipped class-rooms and large, well-lighted laboratories.

The building affords the best accommodations for education in agriculture and applied subjects, and is especially adapted to its needs.

Watauga Hall is a three-story brick building, trimmed with brownstone and containing sixty rooms for dormitories. There is also a large dormitory in the attic, and in the basement are bath-rooms, which are free for students' use.

Dormitories.—In addition to Watauga Hall, one three-story and three two-story brick buildings are used exclusively for dormitories.

The Infirmary is a two-story brick building, containing a sitting-room, seven bed-rooms, three bath-rooms, a kitchen, linen-room, College Physician's office and medicine closet. The rooms are large, well ventilated, well lighted, and heated with open fire-places. Each room opens upon a large, pleasant portico. The furnishing and equipment of the rooms are such as are used in modern hospitals.

The Boiler House is a single-story brick building, containing boilers, fire-pump and the machinery connected with the steam-heating plant.

The Barn is a frame building of modern design and carefully planned for the purposes to which it is devoted. The barn is fifty by seventy-two feet and three stories high.

Fire Protection.—The College is supplied with a steam-pump, reservoir, hydrants and fire-hose to protect the buildings from burning.

Heat and Light.—All the College buildings are lighted by electricity from a plant managed by the students, under the direction of the Professor of Electrical Engineering.

The third and fourth dormitories, Primrose Hall and the green-houses attached are heated by hot water; the Textile Building is heated by the Sturtevant hot-air system, and the other College buildings are heated by the Warren-Webster vacuum system of building-heating.

THE AGRICULTURAL EXPERIMENT STATION.

The North Carolina Agricultural Experiment Station is a department of the College. It was established originally as a division of the State Department of Agriculture, in accordance with an act of the General Assembly ratified March 12, 1877. Its work was greatly promoted by act of Congress of March 2, 1887, which made a liberal donation to each State for the purpose of investigations in agriculture

and for publishing the same. The bill, which subsequently became a law, was introduced by Representative William H. Hatch of Missouri.

The Director's office is in the Agricultural Building in Raleigh and the laboratories are in the main building at the College. The experimental work in agriculture, horticulture, stock and poultry raising, and dairying is conducted on the College farm, and the investigations in plant diseases and chemistry in the College laboratories.

The Station is always glad to welcome visitors and to show them the work in progress. The Station conducts a large correspondence with farmers and others concerning agricultural matters. It takes pleasure in receiving and answering questions.

Publications relating to general farming matters and embodying the results of experiments are published and sent free to all citizens of the State who request them. A request addressed to the Agricultural Experiment Station, Raleigh, N. C., will bring these publications and answers to letters.

THE PURPOSE OF THE COLLEGE.

The College is an institution where young men of character, energy and ambition may fit themselves for useful and honorable work in any line of industry in which training and skill are requisites to success. It is intended to train farmers, mechanics, engineers, architects, draughtsmen, machinists, electricians, miners, metallurgists, chemists, dyers, mill-workers, manufacturers, stock-raisers, fruit-growers, truckers, and dairymen, by giving them not only a liberal but also a special education, with such manual and technical training as will qualify them for their future work.

It offers practical and technical education in Agriculture, Horticulture, Animal Industry, Civil Engineering, Mechanical Engineering, Electrical Engineering, Mining Engineering, Metallurgy, Chemistry, Dyeing, Textile Industry, and Architecture. It also offers practical training in Carpentry, Wood-turning, Blacksmithing, Machinists' Work, Mill-work, Boiler-tending, Engine-tending, Dynamo-tending and Installation, Electric-light Wiring, Armature Winding and other subjects relating to practical electricity.

Although the leading purpose of the College is to furnish technical and practical instruction, yet other subjects essential to a liberal education are not omitted. Thorough instruction is given in English, Mathematics, History, Political Economy, Physics, Chemistry, Botany, Zoology, Physiology, and Geology.

The College is not a place for young men who desire merely a general education without manual or technical training, nor for lads

lacking in physical development, mental capacity or moral fibre, nor for those that are unable or unwilling to observe regularity, system and order in their daily work.

PRIZES.

A first prize of ten dollars and a second prize of five dollars are awarded annually to the student in the Freshman Class who earns the largest and the next largest amount of money by labor on the College farm.

The Arthur H. Thomas Company of Philadelphia offers to the Biological Club as a prize an "Aplanatic Triplet" hand magnifier, to be awarded for the most deserving work in biology.

The Zenner Disinfectant Company, Detroit, Mich., offers a silver medal to the student making the best report on the Live Stock Exhibit at the State Fair. The value of this medal is \$25.

The North Carolina State Fair Association offers a prize of \$5 to the student preparing the best essay on the Live Stock Exhibit at the State Fair.

DISCIPLINE.

The College is under military discipline and the students are regularly organized into a battalion. A printed copy of rules and regulations is furnished each student on admission, and he is expected to conform to the same during his connection with the institution. The discipline is intended to secure studious and economical habits, with punctuality, system and order in the performance of all duties. A durable uniform, which is required to be worn on all occasions, prevents extravagance and folly in dress; rooms plainly furnished and a mess-hall economically managed by the College prevent extravagance in living; regular study hours, day and night, with proper restrictions as to visiting Raleigh, check, or at least minimize, tendencies to idleness, vice, and rowdiness.

Every effort is made to develop strong, intelligent, high-toned men; and proper patience, forbearance and sympathy are used in this great work; but the College is in no sense a reform school, and its work must not be hindered by the presence of young men who are grossly vicious, idle or incompetent.

REPORTS AND SCHOLARSHIP.

Regular reports of scholarship and conduct are made to parents and guardians three times a year. Special reports are made whenever necessary. Students who are persistently neglectful of duty, or mani-

festly unable to do the work required, will be discharged at any time. The Faculty will require any student to withdraw whenever it is plain that his stay in the institution is not profitable to himself or to the College.

RELIGIOUS INFLUENCES.

All students are required to attend chapel exercises in Pullen Auditorium each morning. These services are conducted by the President, by some member of the Faculty or by some visiting minister.

Each student is required to attend religious service in Raleigh on Sunday morning at the church of his choice.

Services are also held in Pullen Auditorium on the second Sunday evening of each month. During the year 1904-'05 these services were conducted by the following ministers:

September—The Rev. R. F. Bumpass, Raleigh.

October—The Rev. J. C. Masee, Raleigh.

November—The Rev. Alex. L. Phillips, D.D., Richmond, Va.

December—The Rev. W. M. Butler, Raleigh.

January—The Rev. F. A. Bishop, Raleigh.

February—The Rev. W. C. Tyree, D.D., Raleigh.

March—The Rev. R. S. Stevenson, Raleigh.

April—The Rev. A. H. Moment, D.D., Raleigh.

May—The Rev. I. McK. Pittenger, D.D., Raleigh.

The Young Men's Christian Association, containing in its membership representatives of all the Christian denominations, meets regularly each Sunday afternoon at 2:30 o'clock for conference, Bible study and worship, and exerts a wholesome influence throughout the College.

The members of this Association will meet and welcome new students at the railroad station.

ATHLETICS.

The College is provided with extensive grounds, which furnish ample facilities for military drill and athletic sports.

Out-door sports are directly managed by the Athletic Association and are under the control of a committee of the Faculty.

The Faculty rules governing athletics are as follows:

1. No student shall be eligible for an athletic team in this College unless he be registered on or before October 12th.

2. No student shall be eligible for an athletic team in this College who is deficient in scholarship.

3. No student shall be eligible for an athletic team in this College who pursues less than seventeen hours of College work a week.

4. No student who has received, or is receiving now, or has been promised, directly or indirectly, any money or compensation in lieu of money for athletic services, or who has been a member of an incorporated league team, shall be eligible for any athletic team in this College.

The Athletic Association is organized by the student body to promote physical health and manly spirit through athletic sports. Under the direction of the Athletic Committee of the Faculty it promotes practice in base-ball, foot-ball, track athletics, etc.

LIBRARY AND READING-ROOMS.

The College Library occupies the first story of Pullen Hall. The reading-room is supplied regularly with about one hundred and fifty magazines and journals of various kinds, and yearly additions are being made to this number. The library contains about four thousand volumes. There are also reference libraries in the different departments. The library is kept open from 9 A. M. to 6 P. M. The Librarian is always present to assist students in finding desired information.

The Olivia Raney Library in Raleigh, containing now about seven thousand volumes, is free to the students and they have the privilege of borrowing books from it. Students also have the privilege of consulting books in the State Library.

STATE MUSEUM.

Students have free access to the large collections of the State Museum. These collections furnish most excellent opportunities for studies in Geology, Mineralogy, Mining, Forestry, and Natural History.

COLLEGE SOCIETIES.

Such college organizations are encouraged as tend to form good character, to develop manly physical vigor and to promote literary, scientific and technical research and training.

Farmers' Institute.—The students in the Winter Course in Dairying and Agriculture meet every Wednesday night during the winter term for a discussion of practical agricultural problems. The meetings are conducted in the manner of a Farmers' Institute and give training in conducting farmers' meetings, *ex tempore* speaking on

agricultural questions, and the writing and reading of reports on various farm operations.

The Rural Science Club meets semi-monthly for the discussion of agricultural subjects, review of current agricultural publications, and reports on personal experiments and the work of the College farm and Experiment Station.

The Biological Club meets semi-monthly for the discussion of biological subjects in their relation to practical agriculture. Students here present results of their own investigations and observations and reviews of the more important current publications, particularly those from the United States Department of Agriculture and the State Experiment Stations. A prize is awarded at an annual contest for the best presentation of results of original research by the members.

The Berzelius Chemical Society meets fortnightly for the discussion of chemical subjects and for review of the current chemical literature, with which the College is well supplied.

Electrical Engineering Society.—The members of the Society meet once a week in the physical laboratory. To review the articles on electrical engineering in the current journals is one of the chief objects of the Society. The Society has at its disposal the best periodicals, most of which are furnished free of charge by the publishers.

The Textile Society meets once a month for the discussion of subjects relating to cotton manufacturing. Articles in current journals are also discussed. The Society has placed in the library the best textile periodicals, some of which are furnished free of charge by the publishers.

The Pullen, Leazar and Tenerian Literary Societies afford excellent opportunities for practice in declamation, debate, composition, and parliamentary law, as well as opportunities for social pleasure and recreation.

The Dramatic Club presents at least one play each year to the students and people of Raleigh. The plays selected are of high literary character and offer full opportunities for artistic and clever acting.

The Glee Club is composed of about twenty young men, embracing the best musical talent of the College. It aims to give one concert each year, and afterwards to sing at various College entertainments and functions during the year.

The Alumni Association meets on Monday of each year preceding Commencement day, transacts its annual business, hears the Alumni oration and attends the annual Alumni banquet. This Association purposes raising funds to erect an Alumni Building at the College.

REQUISITES FOR ADMISSION.

Applicants for admission must be at least sixteen years of age and must bring certificates of good moral character from the school last attended.

To the Four Year Courses.—Applicants for admission to the Freshman Class of all four year courses will be examined on the following subjects: Arithmetic (complete), Algebra (through simple equations), English Grammar, Analysis and Composition, and American History. No student will be admitted to the Freshman Class whose examination papers are seriously faulty in spelling, grammar, punctuation or division into paragraphs.

To the Two Year Courses.—Applicants for admission to the two year course in Textile Industry will take the same examinations as those required of candidates for admission to the Freshman Class.

Applicants for admission to the two year courses in Agriculture and in Mechanic Arts will be examined on Arithmetic (through decimal fractions), English Grammar and Composition, and American History.

Applicants for admission to the two year course in Agriculture, if they are twenty years of age, or over, will not be required to take the entrance examinations.

To the Winter Courses.—No entrance examination is required of candidates for admission to the winter courses. No one under eighteen years of age will be admitted to a winter course.

ENTRANCE EXAMINATIONS.

Entrance examinations will be held by the County Superintendents of Instruction in each court-house in the State at 10 o'clock A. M. the second Thursday in July of each year. The date for 1905 is July 13th. These examinations will save the expense of a trip to Raleigh in case the candidate should fail or if there should not be room enough for him in the College. Entrance examinations will be held also at the College at 9 o'clock A. M. on Wednesday preceding the opening day. The date for 1905 is September 6th.

ADMISSION WITHOUT EXAMINATION.

The following persons will be admitted without examination:

1. Applicants for admission to winter courses, over eighteen years of age.
2. Applicants for admission to the two year course in Agriculture, if they are over twenty years of age.

3. School-teachers holding teachers' certificates.
4. Graduates of those High Schools and Academies whose certificates are accepted by the Faculty of this College.

CONDITION EXAMINATIONS.

Examinations will be held during September and February for the removal of conditions. Students will be admitted to these examinations without charge.

During 1905-1906 these examinations will be held on the following days, beginning at 9 o'clock A. M.:

Wednesday, September 6th. and Saturday, February 3d—Agriculture, Horticulture, Civil Engineering, Architecture, Mechanical Engineering, Electrical Engineering, Mining, Metallurgy, and Textile Industry.

Thursday, September 7th, and Saturday, February 10th—Chemistry, Dyeing, Physics, Geology, Mineralogy, Botany and Vegetable Pathology, Zoology, Entomology, Veterinary Science, History, Political Economy, Military Science.

Friday, September 8th. and Saturday, February 17th—English.

Saturday, September 9th. and Saturday, February 24th—Mathematics.

Special examinations for the removal of conditions may be held at other times only upon petition to the Faculty, said petition to be accompanied by a receipt from the Bursar for one dollar for each special examination. All moneys collected as fees for special examinations will be turned over to the loan fund for needy students.

Conditions not removed within a year can be removed only by taking the subject again in class, except that a student who enters college with conditions in practice work may be allowed to carry half of his conditions in practice work to the second year if he remove half of these conditions during his first year.

In order to be graduated, a student must be clear of all conditions before beginning the March examinations of the Senior Year.

A student who fails in three studies at any term will be dropped to a lower class or from the College rolls.

The Registrar will include in the report of each student for each term a list of conditions against the student and a notice of the time at which condition examinations will be held.

SESSION.

The College session lasts nine months, and opens annually the first Thursday in September and closes the last Wednesday in May, with a vacation of about ten days at Christmas.

EXPENSES.*

The total expenses of a student for the first year are as follows:

Tuition	\$20.00
Room rent	10.00
Fuel and lights.....	12.50
Furniture	2.00
Library	2.00
Incidental	1.00
Medical attention and medicine.....	5.00
Physical culture	2.00
Lectures	1.00
Registration	2.00
Board	72.00
Shop (material and use of tools).....	1.00
Drawing (material furnished)	1.00
Uniform and cap	14.30
Drawing instruments (complete outfit).....	8.85
Books (estimated cost)	5.00
Laundry (estimated cost)	10.00

Total expenses for year.....\$169.65

Freshmen and first year students in Agriculture are not required to take drawing or shop work. The total of their expenses for the year is \$158.80.

A student on entering college will need about forty dollars to meet his various dues for the first month.

Students having scholarships do not pay tuition. Their total expenses are \$149.65. The first three items above, namely, tuition, room rent and fuel and lights, amounting to \$42.50, are collected in monthly payments of \$4.75 a month, on the first of each month, with no deduction for less time than one month. The registration, furniture, physical culture and medical fees are collected one-half (\$5.50) in September, or whenever the student enters, and one-half (\$5.50) in January. Students registering on the day appointed for registration are excused from paying the registration fee. Library, incidental, and lecture fees (\$4.00) are collected in September, or whenever the student

* The above statement of expenses covers charges made in former years in the College. It is probable that changes will be made during the coming year, increasing the expenses to about two hundred dollars per annum, in order to meet the increased cost of food supplies, labor, etc. It is also probable that, beginning with the next session, term payments will be required of students at the beginning of the three terms in September, January and March, instead of monthly, as heretofore.

enters. Board is payable in installments of \$8 per month on the first day of each month from September to May, inclusive. Board for less time than one month is charged for at the rate of fifty cents a day. Choice is given between paying by the month or by the day. The College Bursar is forbidden by the Trustees to give credit, and there is no deviation from this rule.

Drawing instruments are not required in the Freshman Class nor in the First Year Mechanics Arts course until the beginning of the second term. These instruments are furnished by the College at cost to all students requiring them. New students are advised not to purchase instruments before consulting the drawing instructors.

The College rooms are supplied with necessary furniture. Each student should bring with him two pairs of blankets, two pairs of sheets, two pillow-cases and two bed-spreads for single bed.

In addition to the fees enumerated above, students are required to pay fees as follows: A fee of \$1 from students taking work in biological, physical or electrical laboratory, for material furnished. The deposits for the Chemistry Department are as follows: Inorganic laboratory, \$3; analytical laboratory, \$5; organic laboratory, \$4; determinative mineralogy and assaying, \$3. A deposit of \$3 from Juniors and \$4 from Seniors taking dyeing laboratory, to cover breakages. A deposit of \$5 from textile students, to cover cost of designing, supplies, tools, etc. Any unused portion of deposits to chemical and dyeing laboratories or to the textile department will be returned at the end of the year. If the deposit made is not sufficient to cover breakages and cost of material furnished, the students are required to make good the deficiency.

UNIFORM.

The College uniform must be worn by all students except winter course students. It must be purchased at the College from the contractor. The uniform is of a strong gray cloth, and with care it will last a year. New students are especially cautioned not to bring with them to the College a supply of citizens' clothing, as the uniform must be worn on all occasions. Each student is required to wear an overcoat during cold weather. Overcoats may be brought from home or purchased in the city. In order to secure uniformity, dark colors (black or dark gray) are required.

FREE TUITION.

Scholarships, one hundred and twenty in number, conferring free tuition, are given to needy boys of talent and character. As far as possible, these scholarships are distributed among the counties of the State. Appointments are made only by the President of the College upon written recommendation of members of the Legislature. The scholarships are not intended for people who have property. Certificates of inability to pay must be made by the applicant and endorsed by the person recommending him.

SELF-HELP.

Many students pay their own expenses, either wholly or partly, by doing various kinds of work. There is regular employment for a limited number, enabling them to earn from \$4 to \$10 a month. There is also occasional employment, paying from \$2.50 to \$5 a month. The work offered is mainly on the farm, in the barn, milking and feeding cattle, etc., and is for agricultural students only. There is very little work available for others, except serving in the dining-room. Young men should not rely upon material help from work the first year, as most of the work is given to students who have had a year's experience at the College. Application for work should be made before the student comes to college.

STUDENT LOAN FUND.

The Alumni Association of the College has established a small fund to be lent to needy students of talent and character. The loans are made at six per cent., and good security is required. Sufficient time is given for repayment to enable the student to earn the money himself. The amount lent to each student is limited. The purpose is to help young men who are willing to help themselves and who cannot find sufficient employment while in college to meet all their necessary expenses.

Contributions are solicited for this fund from students, Alumni and friends of education generally. The fund is administered by the College Bursar, under the direction of the President. At present the fund amounts to \$960.97.

BOARD AND LODGING.

All students are expected to board in the College mess-hall and to room in the College dormitories. An abundant supply of plain, nourishing food, with as large variety as possible, is furnished absolutely at cost. The charge at present is \$8 per month, payable in advance.

Rooms in the College dormitories are supplied with electric lights, steam heat and all necessary furniture, except sheets, blankets, pillow-cases, bed-spreads and towels, which each student must furnish for himself. The charge for lodging is by the month, and there is no reduction in case of withdrawal.

CARE OF THE SICK.

Every effort is made to protect the health of young men in the College. Regular inspections of the entire institution are made once a year, or oftener, by the State Board of Health. Similar inspections, at frequent intervals, are made by the College physician. There is an abundant supply of pure water from twelve deep wells. Each student has a regular routine of daily life, including abundant physical exercise in the shops and on the drill grounds.

In case of sickness a student is taken immediately to the College Infirmary, where he receives medical attention and careful nursing.

The College physician visits the Infirmary daily at 10 o'clock, and in cases of serious illness as frequently as may be required.

A trained nurse has charge of the Infirmary at all times.

COURSES OF INSTRUCTION.

The College offers the following Courses of Instruction :

I. Four Year Courses :

- 1st. Agriculture** (including Agriculture, Horticulture, Veterinary Science, Biology, and Agricultural Chemistry).
- 2d. Engineering** (including Civil Engineering, Mechanical Engineering, Electrical Engineering, Mining Engineering, and Industrial Chemistry).
- 3d. Textile Industry or Cotton Manufacturing** (including Carding, Spinning, Weaving, Designing, and Dyeing).

These courses offer a combination of practical and theoretical work, about half of the time being devoted to lectures and recitations and the other half to work in the shops, laboratories, drawing-rooms, green-houses, dairies, fields and mills. They are intended to furnish both technical and liberal education. The degree of Bachelor of Agriculture is conferred upon a graduate in the Four Year Course in Agriculture. The degree of Bachelor of Science is conferred upon a graduate of the Four Year Course in Chemistry or Dyeing, and the degree of Bachelor of Engineering upon a graduate of either of the other Four Year Courses.

II. Short Courses of two years (not leading to a degree) in Agriculture, in Textile Industry, in the Mechanic Arts (including Carpentry, Wood-turning, Blacksmithing, Machine-shop Work, Drawing, and Dynamo and Engine Tending, and in Applied Electricity.

The Short Courses include nearly all the practical work of the Four Year Courses, with less theoretical instruction. They are intended for students who desire chiefly manual training or for those who are unable to complete the Four Year Courses.

III. Winter Courses in Agriculture and Dairying, beginning at the opening of College in January and extending to the close of the term ending in March.

IV. Normal Courses for the training of teachers along industrial lines.

V. The Summer School.

VI. Graduate Courses, extending over two years and leading to advanced degrees, are intended for students who have completed the Four Year Courses and who desire further instruction and training along special lines.

AGRICULTURAL COURSES.

I. The Four Year Course in Agriculture.

Ia. The Two Year Course in Agriculture.

Ib. The Winter Course in Agriculture and Dairying.

Aim and Scope.—The aim of the Agricultural Courses is to train young men in both the science and the practice of their profession. It is believed that every young man preparing to farm needs a double education—one that is practical, to fit him for his profession; another that is cultural, to fit him to live.

In order to meet the necessities of all young men who desire instruction in Agriculture, the College offers four distinct courses:

The four year course aims to give a training that is thoroughly practical as well as scientific in Agriculture and its various branches, such as Stock-raising, Dairying, and Horticulture. The strictly technical portion constitutes about one-third of the work. Of the remaining two-thirds of the course more than one-half is prescribed in the sciences. This is done for the training and information they give, and to prepare for the technical work of the course. Because of this, and because the subject-matter and the methods of the technical portion lie so fully within the domains of science, the course is essentially scientific rather than literary. Yet the College is mindful of the fundamental character of English Literature and of Political Economy as training studies, and reasonable attention to these studies is required.

The two year course is designed to meet the needs of those who are unable to take the longer course. It is especially devoted to the practical study of Agriculture and Horticulture and their various branches, and the natural sciences which are so closely related to farming.

The ten weeks winter course in Agriculture is established to meet the needs of those who can spend only the winter at the College. The important and practical subjects of Agriculture and Horticulture and Stock-raising receive principal attention.

The ten weeks dairy course is a course in practical butter-making in accordance with the most approved methods of the modern creamery.

Methods of Instruction.—Instruction is by laboratory work, supplemented by text-books, lectures, and reference readings, which are almost constantly assigned from standard volumes and periodicals.

The equipment for the technical work of the course is rapidly increasing. The Department of Agriculture is fitting up laboratories for investigation in Soil Physics and in the mechanical analysis of soils. The dairy department is equipped with a modern creamery for pasteurizing, separating, creaming and churning and for investigation in dairy bacteriology.

The department makes free use of the fields, orchards and gardens, in which the Agricultural Experiment Station conducts experiments in methods of culture, in effects of several practices upon yield and upon fertility, in varieties of fruit, of vegetables and of forage crops. The methods employed and the results obtained are freely used for instruction.

In work other than purely technical the agricultural students meet the same instructors and enjoy the same privileges as other students of the College. In all departments the laboratory method is freely employed. The student uses apparatus with his own hands and consults the literature of the subject at every step.

Self-support while a Student.—The Board of Agriculture, in the interest of young men who are unable to meet necessary college expenses, has appropriated \$2,000 annually for student labor. This generosity on the part of the Board enables every student to pay a good part of his college expenses: some are able to meet the entire expense this way. This sum appropriated is intended solely to pay for farm work. The work is precisely the sort of work that is done on the farm—plowing, hauling, tile-laying, feeding beef cattle, feeding dairy cattle, feeding and grooming horses, running ditches and terraces, repairing machinery and tools, harvesting crops, the care of hogs, poultry, etc.

This feature in the course of Agriculture is helpful not only in defraying college expenses, but serves as a training and education as well.

Requisites for Admission.—Applicants for admission to the four year course in Agriculture must be at least sixteen years of age. They are examined in the following subjects: Arithmetic (complete), Algebra (through simple equations), English Grammar, and American History.

For the two year course in Agriculture no entrance examinations are required if the applicant is at least twenty years old. Applicants not twenty years old desiring to enter the two year course will stand an examination in Arithmetic (through decimal fractions), English Grammar and Composition, and American History.

For the winter courses in Agriculture and Dairying no entrance examination is required, but applicants must be over eighteen years of age.

I. Four Year Course in Agriculture, leading to the Degree of Bachelor of Agriculture.

Freshman Year.

SUBJECTS.	PERIODS PER WEEK.*

WINTER COURSES IN AGRICULTURE AND DAIRYING.

General Statement.—The Winter Course in Dairying and the Winter Course in Agriculture are designed to meet the wants of young men who are ambitious to excel in their chosen vocation of farming and who feel the need of more and better preparation before taking up their life-work. The subjects presented in the two courses are those about which every young farmer should have definite and clear knowledge. In their treatment the topics are handled in such a way as to make the information to the student useful in the highest possible degree.

There is no longer any question concerning the value of advanced, definite knowledge concerning agriculture to those who follow farming. Education and training pay on the farm as they do elsewhere in life.

The expenses of the course are so little, and the good to be derived so great, no young man in North Carolina can afford to miss the opportunity of getting this training so necessary in his work. The money necessary to meet the expenses for a whole term's instruction can be earned in a month or two before attending. Therefore no young man, even though he possess but a few dollars, can afford to miss the opportunity for training in his work.

The studies offered are dairying, stock-raising, creamery practice, stock-feeding, diseases of farm animals, dairy farming, breeding farm animals, entomology, dairy chemistry, farm economics, and book-keeping. The class-room work is supplemented by practice in the creamery, barn, green-house and work-shop.

Equipment.—The work in dairying, which includes butter-making, milk-testing, handling cream separators, pasteurizing cream and milk, and dairy bacteriology, is given in the Dairy Building. The building is equipped with separators, milk-testers, pasteurizer, and all tools required in making butter and preparing milk or cream for the city markets.

Requirements for Admission.—No entrance examination is required, but the students taking either the Dairy or Winter Course must be at least eighteen years of age and should have a common-school education.

Expenses—College Dues.—Each student is required to pay a laboratory fee of five dollars. Tuition and instruction are entirely free.

Other Expenses—Books and note paper will cost from two to three dollars, and two white duck suits to wear in the dairy laboratory will cost one dollar each. The suits, however, are not required.

Board and room may be secured for \$2.50 per week. The total expenses of the whole ten weeks need not exceed thirty dollars.

Ib. The Winter Course in Agriculture and Dairying.

Butter-making.—This course includes all practical operations of creamery management. The student works with the guidance and under the direction of the instructor at the same operations of butter-making, or pasteurizing, or milk-testing, until proficiency is obtained. He is required to follow the milk from the time it enters the laboratory and creamery until the product leaves it, and to determine the points in processes where losses occur and reasons why they occur. Six periods. Mr. KENDALL.

Milk and Butter Production.—This course consists of lectures and recitations on the methods of taking care of milk and the manufacturing of it into other products, also lectures upon construction, equipment and operation of creameries, dairies and milk depots. Each student is required to draw a plan of a farm dairy and prepare an estimate for equipment of same. Two periods. Mr. KENDALL.

Feeds and Feeding and Stock-raising.—This subject consists of an elementary study of the composition of foods; the constituents of feeding, amount, combination and form necessary to give best results with various kinds of live stock.

The student is required to calculate digestibilities and nutritive ratios and to arrange therefrom proper feeding rations. Two periods. Professor BURKETT.

Dairy Farming.—Lectures are given under this subject upon the history, adaption, care and management of the different breeds of dairy cattle. Dairy animals are studied by the score card, in accordance with the practice of judging animals for dairy purposes.

Instruction will also be given upon the character of food-stuffs, the relation of food to the animal, and kind and quality of food for the best milk production. Two periods. Professor BURKETT.

Soil Study.—Lectures and recitations upon composition, formation, kinds and physical properties of soil and their improvement by cultivation, natural and artificial fertilizers, drainage, etc.

The work in class-room is supplemented by work in the field and soil physics laboratory. One period. Assistant Professor McCLELLAND.

Farm Crops.—In this subject is included rotation of crops, green manuring, and a critical study of corn and cotton; judging of corn; condition of germination and growth, and improvement by selection and breeding. One period. Assistant Professor McCLELLAND.

Soils and Fertilizers.—Lectures on fertilizers and fertilizing materials and on the typical classes of North Carolina soils. Two periods, five weeks. Director KILGORE.

Farm Chemistry.—Lectures on air, water, the chemistry of plant and animal nutrition, and the composition of milk and its products. Two periods. Professor WITHERS.

Plants.—This course treats of plants in general, embracing such subjects as plant breeding, seed selection, seed testing, plant propagation and nutrition, classification, plant disease and its prevention, and bacteria and fungi in their relation to farm produce, treating of both the beneficial bacteria of farm operations and the injurious bacteria that produce disease, etc. Two periods. Professor STEVENS.

Economic Entomology.—This is a short course in which the more important noxious insects are studied, with special reference to methods of preventing their injuries. The various insecticides and methods of spraying are also included in this course. Two periods. Mr. SHERMAN.

Diseases of Live Stock.—The lectures on this subject consist of Elementary Veterinary Anatomy and Physiology with special reference to the digestive and reproductive organs and the most common diseases and their treatment. Four periods. Professor BUTLER.

Book-keeping.—This subject consists of the practical study of farm accounts, supplemented by numerous original examples and sets for practice. One period. Professor HILL.

Farm Economics.—This is an elementary course, dealing with production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation and taxation. One period. President WINSTON.

AGRICULTURE.

Equipment.

The College possesses the following equipment for instruction in Agriculture:

The farm includes six hundred acres, with two hundred and fifty acres under cultivation; a large three-story basement barn, 50 by 72 feet. The first floor is occupied by farm implements and machinery; the second story is occupied by horses, grain bins, cutting implements, etc.; the third story, by hay, which is elevated by a Ricker and Montgomery hay carrier. Just outside the barn are two 70-ton silos and one 125-ton silo. These are connected with a No. 18 Ohio feed and ensilage cutter. Power for cutting is supplied by an eight-horse

power Skinner engine. The farm is supplied with all necessary machinery for the most successful and up-to-date farming.

The Dairy Building contains three rooms and cellar, and is supplied with DeLaval, Sharpless, United States, Empire, National, and Reid Separators, Babcock Testers, various kinds and makes of churns, butter-workers, and cheese apparatus, etc.

The live stock consists of necessary horses and mules, a herd of dairy cattle, and a herd of swine. The Poland China and Berkshire swine are pure bred, and from high-class specimens. Breeding-stock is sold as a part of the farm products.

The poultry-yard is divided into sixteen lots. The buildings consist of incubator cellar, brooder-house, and hen-houses. Several different incubators are used. The poultry-yards contain the following breeds, White Wyandotte, White and Barred Plymouth Rock, Black Minorca, Brown Leghorn, Light Brahmas and Pekin Ducks.

Subjects of Instruction.

1. Breeds of Live Stock.—Lectures and recitations upon the history, characteristics, care and management, and adaptation of the different breeds of live stock. Practical exercises are given in scoring and judging the various kinds of live stock with the score card. Three periods, first term. For Sophomores and second-year students. Professor BURKETT.

2. Thremmatology.—Lectures and recitations upon the laws of inheritance, and the principles and phenomena of evolution as applicable to the improvement of animals or plants. The aim is to bring every known principle of reproduction to the assistance of the breeder's art. Practical exercise in scoring and judging live stock, and in writing and tracing pedigrees. Three periods, second term. For Sophomores and second-year students. Professor BURKETT.

3. Stock-feeding and Hygiene.—Lectures and exercises upon the laws of nutrition, and the character of food-stuffs, and the kind and quality of foods to produce certain results. Practical exercises in calculating digestibility, nutritive ratios and feeding standards. Three periods, third term. For Sophomores and second-year students. Professor BURKETT.

4. Farm Equipment.—Lectures and recitations upon selecting, planning and equipping farms: planning and erecting farm buildings; farm vehicles and machinery; power, water and drainage; practical exercise in drawing plans of farms and farm buildings; leveling and laying drains, dynamometer tests of wagons and farm

implements, etc. Four hours, first term. For Juniors and second year students. Assistant Professor McCLELLAND.

5. Soils.—Lectures and recitations upon composition, formation, kinds and physical properties of soils and their improvement by cultivation, natural and artificial fertilizers, drainage and irrigation. Practical exercises in testing physical properties of several soils, determining the relation of soils to heat, moisture, air and fertilizers, and mechanical analysis. Four hours, second term. For Juniors and second year students. Assistant Professor McCLELLAND.

6. Farm Crops.—Lectures and recitations upon the history, production, harvesting and marketing of farm crops. Practical exercise with growing and dried specimens of farm crops, including grasses, clovers and other forage crops. Four hours, third term. For Juniors and second year students. Assistant Professor McCLELLAND.

7. Farm Machinery.—Lectures and laboratory work on the tools and machinery of the farm, in reference to their design, construction, draft, durability and care. The student is required to set up and test the various machines used on the farm. Three hours, third term. For Juniors and second year students. Assistant Professor McCLELLAND.

8. Animal Husbandry.—A critical study of the horse; his breeding and management; gaits; practice in expert judging of horses. Two periods, first term. For Seniors. Professor BURKETT.

9. Animal Husbandry.—A critical study of beef and dairy cattle; the breeding, feeding and management, and practice in expert judging of cattle. Two periods, second term. For Seniors. Professor BURKETT.

10. Animal Husbandry.—A critical study of sheep and swine in reference to type, wool or mutton; pork or bacon. The breeding, feeding and management of sheep and swine, and practical exercise in expert judging sheep and swine. Two periods, third term. For Seniors. Professor BURKETT.

11. Agronomy.—A critical study of the farm crops, corn and cotton; judging corn; conditions of germination and growth, and improvement by selection and breeding. Three periods, first term. For Seniors. Assistant Professor McCLELLAND.

12. Special Crops.—Special crops will be studied by the student in the laboratory and field. Three periods, second term. For Seniors. Assistant Professor McCLELLAND.

13. Soil Physics and Management.—This course is designed for advanced work in the study of soils, both in the laboratory and the

field. Three periods, third term. For Seniors. Assistant Professor McCLELLAND.

14. Dairying.—Practice and occasional lectures. The course consists in general management of modern dairying, the methods of milk analysis, the bacteriology of milk, the use of separators, the testing of milk, ripening of cream, churning, working, packing, and scoring butter. Four periods, third term. For Freshmen. Four periods, first term. For first year students. Professor BURKETT and Mr. KENDALL.

15. Dairy Bacteriology.—A laboratory course in the study of bacteria in its relation to creamery, butter-making, and cheese production. Three periods, first term. For Seniors. Mr. KENDALL.

16. Experimental Dairying.—Laboratory practice in making butter and cheese. Three periods, second term. For Seniors. Mr. KENDALL.

17. Dairy Seminary.—Laboratory practice in making butter and cheese of special commercial importance. Three periods, third term. For Seniors. Mr. KENDALL.

18. History of Agriculture and Rural Economics.—Lectures upon the history of agriculture; present agricultural methods in various counties, cost and relation, profits of various farm operations and systems. Three periods, third term. For Seniors. Professor BURKETT.

HORTICULTURE.

Equipment.

Twenty-three acres of land comprise the Horticultural Experiment farm. There is ample equipment of barns, silos, stock, and machinery. There are five communicating greenhouses, separated by glass partitions so that different night temperatures can be maintained to suit the various purposes to which the houses are devoted. In addition, there is one glass structure, without heat, for the culture of foreign grapes. There is kept a general collection of plants for botanical study and for practice in Floriculture, and in two of the houses winter forcing of vegetables and fruits is carried on, in order that the students may have practice in a line of work that is rapidly assuming commercial importance in the State. The building and greenhouses are heated in the most complete manner by hot water.

The entire basement of Primrose Hall is used as a Horticultural Laboratory, where practice in grafting, potting and cross fertilization of plants is constantly going on.

Subjects of Instruction.

21. Elementary Horticulture.—Four periods, first term. Required of Freshmen. Four periods, second term. Required of first year students. Assistant Professor McCLELLAND.

22. Pomology.—Four periods, second term. Required of Freshmen. Four periods, third term. Required of first-year students. Assistant Professor McCLELLAND.

23. Market Gardening.—Lectures on the theory and practice of growing vegetables in open ground and under glass commercially. Three periods, first term. Elective for Seniors.

24. Forestry.—Lectures on forest influences and methods of forest management, timbers and forest products. Three periods, second term. Elective for Seniors.

25. Landscape Gardening.—Lectures on the history of the garden art and styles of ornamental gardening, planning of country places and farm-houses, and improvement of grounds in general. Three periods, third term. For Seniors.

BOTANY AND VEGETABLE PATHOLOGY.

Equipment.

The biological laboratory is equipped with the books, specimens, sterilizers, incubators, microscopes, microtomes and small utensils needed in the prosecution of the work. The excellent herbarium has been mounted and is now accessible for class use. There is an extensive collection of seeds of both weeds and cultivated plants, and most of the important plant diseases are represented by herbarium and alcoholic specimens. The greenhouse is of great utility as a source of material, for seed-testing and for conducting physiological experiments.

Subjects of Instruction.

31. Elementary Botany.—Weekly lectures, accompanied by laboratory work and reference reading regarding the algæ, fungi, ferns, and seed plants. Morphology is emphasized, and the broad principles of nutrition, reproduction, sex, adaptation, and evolution are illustrated. Particular consideration is given to the fungi and seed plants. The student's knowledge is made his own through field-work and independent investigation. Three periods, first and second terms. Required of Freshmen and first year students. Professor STEVENS.

32. Systematic Botany and Ecology.—The student becomes acquainted with the principal orders and families of plants of North Carolina as well as with the general problems of plant classification. More attention is given to the grouping of plants into societies and to the study of plant variation and adaptation than to mere collecting and classifying. The principles of plant breeding, crossing, pollination, budding, and grafting are taught. Three periods, third term. Required of Freshmen and first year students. Professor STEVENS.

33. Plant Diseases.—Lectures and laboratory study of the principal types of plant diseases produced by bacteria, fungi or physiological derangement, with specific consideration of the methods of treatment. This course emphasizes the principles of plant disease and places the student in a position to employ prophylactic and remedial methods rationally. Three periods, first term. Required of Sophomores and second year students. Professor STEVENS.

34. Physiological Botany.—Lectures, demonstrations and laboratory work, treating of plant nutrition, reproduction, and growth. Especial attention is given to phases of the subject bearing most directly upon plant culture. Three periods, third term. Required of Sophomores. Professor STEVENS.

35. Economic Botany.—A study of the more important groups of economic plants, weeds and medicinal plants, seed-testing, nitrification, denitrification, and nitrogen fixation, origin of cultivated plants and of bacteria and fungi in their relation to Agriculture. Two periods, third term. Elective for Seniors. Professor STEVENS.

36. General Bacteriology.—Lectures and laboratory work on the nature, physiology, morphology, and economy of bacteria, with especial reference to home sanitation, disinfection, and to the relation of bacteria to disease in plants and animals. The student becomes familiar in the laboratory with methods of culture and investigation in bacteriology. Two periods. Required of Juniors. Professor STEVENS.

37. Plant Disease (Advanced).—Methods of culture and investigation of plant disease. This course is intended to prepare the student for original investigation in plant diseases. Two periods, first term. Elective for Seniors. Professor STEVENS.

VETERINARY SCIENCE.

The object of the teaching in this department is not to turn out veterinarians, but to more thoroughly equip the agricultural student for the breeding and management of live stock. In addition to the work required of all students in the Agricultural courses, as outlined

below, the Senior students in the four year course in Agriculture may elect to do three periods a week during the entire year. When so elected, this work will be of a more advanced nature, but supplementary to that required of all students in the Agricultural courses.

41. Veterinary Anatomy.—Lectures, illustrated by charts, models and sketches, and, when practicable, by dissections.

Special attention will be given to the organs of digestion and locomotion and such other parts as are of particular interest to the stock farmer. Four periods, first term. Required of Juniors and second year students. Doctor ROBERTS.

42. Veterinary Medicine.—Lectures on the actions, uses, and doses of the most common veterinary medicines, and the nature and cause of disease, with special reference to its prevention. Four periods, second term. Required of Juniors and second year students. Professor BUTLER and Doctor ROBERTS.

43. Veterinary Practice.—Lectures on the most common diseases and injuries of domestic animals, with appropriate treatment for the same. When practicable, these lectures will be illustrated by clinics, which will enable the student to become more familiar with the different diseases and perform minor surgical operations under the direction of the Instructor. Four periods, third term. Required of Juniors and second year students. Professor BUTLER and Doctor ROBERTS.

44. Veterinary Medicine.—Advanced course in veterinary medicine and surgery, with clinical practice. Three periods. For Seniors. Professor BUTLER.

ZOOLOGY.

46. Elementary Zoology.—The fundamental principles of animal life, together with a knowledge of the structure and classification of animals, are developed by lectures, laboratory work, and reading. One term is devoted to vertebrates and invertebrates exclusive of insects but including some of the common parasites infesting man and the domestic animals. This course is intended to present a general view of the animal kingdom and to lay a foundation for the more special subjects that are to follow. Three periods, first term. Required of Freshmen and first year students. Doctor ROBERTS.

47. Animal Physiology.—A comparative study of the bodily functions of man and of the domestic animals. The subject will be covered by lectures and recitations, with laboratory experiments to illustrate principles of physiology. Three periods, second and third terms. Required of Freshmen and first year students. Doctor ROBERTS.

ENTOMOLOGY.

51. Elementary Entomology.—Elements of insect structure and classification. Injurious insects and remedies; *a*, of orchards; *b*, of small fruits; *c*, of truck and garden crops; *d*, of cotton, corn, tobacco, grains, and grasses; *e*, of forest, shade, and ornamental plants; *f*, of barn, mill and household. Three periods, second term. Required of Sophomores. Mr. SHERMAN and Mr. BENTLEY.

52. Entomology (Advanced).—Systematic study of orders and families of insects, with special reference to structure, classification, life-history and habits. Lectures and laboratory practice. Two periods, second and third terms. For Seniors. Mr. SHERMAN and Mr. BENTLEY.

GEOLOGY.

58. Geology.—Scott's *Introduction to Geology*. In the first part of the course the principles of Dynamical Geology, the forces which have modified and are still modifying the earth, are considered. The results of those forces are seen and studied in the structure of the earth and in the phenomena of volcanoes, earthquakes, faults and folds, crust movements, etc. In the latter part of the course the life history of the earth as recorded in the rocks is studied. Special attention is given to the commonly occurring rocks and ores, and the main features of the geology of North Carolina form an integral part of the course. The text is supplemented by lectures. Two periods. Required of Seniors. Dr. WALKER.

CHEMISTRY.*

61. Inorganic Chemistry.—Remsen's *College Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated with experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and Dr. WALKER.

62. Inorganic Chemistry.—Laboratory work. Remsen and Randall's *Laboratory Guide*. The student performs under the eye of the Instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. GARDNER.

*For further information, see course in Chemistry.

63. Organic Chemistry.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Two periods. Elective for Seniors. Mr. HASKELL.

64. Analytical Chemistry.—Treadwell's *Qualitative Analysis*. A discussion of the principles involved in chemical analysis, together with laboratory work in qualitative analysis. The student is taught to detect the presence of the common metallic elements, as well as of the acids in unknown substances. Five periods. Elective for Juniors. Dr. SMITH.

65. Analytical Chemistry.—Clowes and Coleman's *Quantitative Analysis*. Introductory work in gravimetric and volumetric analysis during the first term. During the rest of the year the work of the student in quantitative analysis is continued, embracing analyses of the substances most closely related to his work, as fertilizers, feeding stuffs, milk, butter, etc. Four periods. Elective for Seniors who have taken course 64 in qualitative analysis. Dr. SMITH.

66. Agricultural Chemistry.—Ingle's *Agricultural Chemistry*. A study of the facts obtained by the application of chemistry and chemical methods of investigation to agriculture. The laws of plant and animal nutrition, the economical feeding of plants and animals, and the maintenance of the fertility of the soil are considered from the chemical standpoint. Two periods. Required of Juniors. Professor WITHERS.

68. Industrial Chemistry.—Thorpe's *Outlines of Industrial Chemistry*. A discussion of the processes and principles involved in the more important chemical industries, particularly those whose raw materials are supplied by agriculture or whose products are utilized in agriculture. Two periods. Elective for Seniors. Professor WITHERS.

PHYSICS.*

71. Elementary Physics.—Properties of matter; fundamental units. British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Two periods. Required of Sophomores. Professor PAINE.

* For full information in regard to the Department of Physics, see course in Electrical Engineering.

DRAWING.*

76. Free-hand Drawing.—Work in the use of the pencil; technical sketches of objects, usually parts of a machine. Two periods, first term. Required of Sophomores. Mr. ST. AMANT.

77. Elementary Mechanical Drawing.—Use of instruments; geometric drawing; elementary projection; isometric and cabinet drawing; drawings made to scale from working sketches of pieces of a machine. Two periods, second and third terms. Required of Sophomores. Mr. ST. AMANT.

SHOP-WORK.†

78. Wood-work.—Use of bench tools; working from drawings, lining, sawing, planing; practice in making simple exercises in wood; elementary exercises in wood-turning. One period, first and second terms. Required of Juniors and second year students. Mr. BRAGG.

79. Forge-work.—Exercises in forging and welding; making exercises of iron; care of forge tools and fires. One period, first and second terms. For Juniors and second year students. Mr. DEAL.

80. Mechanical Technology.—Classification and uses of wood-working and forging tools and machines; methods of wood-working and forging; care of belting and shafting. One period, first and second terms. For Juniors and second year students. Mr. BRAGG.

MATHEMATICS.‡

86. Arithmetic.—Begin with decimal fractions and complete the subject. Five periods, first term. Milne's *Standard Arithmetic*. Required of first year students. Mr. MANN and Mr. MACCALL.

87. Algebra.—Up to quadratic equations. Wells' *Higher Algebra*. Five periods, second and third terms. Required of first year students. Mr. MANN and Mr. MACCALL.

88. Advanced Algebra.—Wells' *Higher Algebra*. Begin at quadratic equations; general theory of equations, solution of higher equations, etc. Four periods, first term. Required of Freshmen. Mr. LANG.

89. Geometry.—Plane and solid. Wentworth's *Plane and Solid Geometry*. Four periods, second and third terms. Required of Freshmen. Mr. MACCALL.

*For full information in regard to shop-work, drawing and other Mechanical Engineering subjects, see course in Mechanical Engineering.

†For full information in regard to shop-work, drawing and other Mechanical Engineering subjects, see course in Mechanical Engineering.

‡For full information in regard to Mathematics, see course in Civil Engineering.

ENGLISH.

91. English Composition.—A drill upon the forms of the language, the correct relation of words, the sentence, and the paragraph. Daily written exercises. Three periods. Required of first year students. Doctor SUMMEY and Mr. MASON.

92. Introductory Composition and Rhetoric.—This course in the fundamentals of rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill upon grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods. Required of Freshmen. Professor HILL, Doctor SUMMEY and Mr. MASON.

93. Rhetoric, Criticism, Essays.—The student is taught the essentials of a good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Two periods, second term. Professor HILL, Doctor SUMMEY and Mr. MASON.

94. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of many exercises. Required of Seniors. Two periods, third term. Professor HILL.

95. American Literature.—By means of an introductory text and by much reading students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Two periods, third term. Required of Sophomores. Professor HILL, Doctor SUMMEY and Mr. MASON.

96. English Literature.—The development of English literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two hours, third term. Required of Juniors. Two periods, first and second terms. Required of Seniors. Professor HILL.

HISTORY.

97. English History.—The text is supplemented by lectures on important periods. Two periods, first term. Required of Juniors. Professor HILL.

POLITICAL ECONOMY.

98. Political Economy.—This course deals with public problems relating to the production, distribution and exchange of wealth. The leading topics discussed are capital, wages, money, transportation and taxation. Instruction is given by lectures and text-books. Required of Seniors. Two periods. President WINSTON.

MILITARY SCIENCE.

99. Drill.—Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three afternoons. Required of all classes. Commandant and officers of the Battalion.

100. Tactics.—Theoretical instruction in the Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Outposts, Manual of Guard Duty, etc. One period. Required of Juniors. Captain PHELPS.

ENGINEERING COURSES.

Four Year Courses in

- II. Civil Engineering,
- III. Mechanical Engineering,
- IV. Electrical Engineering,
- V. Mining Engineering,
- VI. Industrial Chemistry.

Two Year Courses in

- IIIa. Mechanic Arts,
- IVa. Applied Electricity.

COURSE IN CIVIL ENGINEERING.

The aim of the Course in Civil Engineering is to give such training as will enable our young men to take an active part in the work of advancing our State along material lines—developing its water-power, building railroads and public highways, constructing water supply and sewerage systems for our towns, etc. The student is given a large amount of practical work in the field and drafting-room, and acquires a fair degree of efficiency in the use of the various surveying instruments, and in drafting. At the same time it is recognized that a successful engineer requires a well-trained mind—one that reasons logically, accurately and quickly. Therefore a thorough course is given in Pure Mathematics and in all those branches of Applied Mathematics which are involved in the solution of engineering problems.

The aim has been to make this pre-eminently a technical course, yet subjects of general culture are included in order to give the student a broader mental training and better preparation for social and business life.

II. The Four Year Course in Civil Engineering, leading to the degree of Bachelor of Engineering.

Freshman Year.

CIVIL ENGINEERING.**Equipment.**

There is a complete equipment of all instruments necessary to civil engineering field-work.

Subjects of Instruction.

101. Graphic Statics.—Determination of stresses in frame structures by graphical methods. Lectures and original problems. Two periods, second and third terms. Required of Juniors in Civil and in Mining Engineering. Professor RIDDICK.

102. Surveying.—Land surveying, levelling, elements of triangulation, topographical surveying, road-making. Merriman's *Land Surveying*. Two periods, first term. Required of Juniors in Civil and in Mining Engineering and of Seniors in Mechanical Engineering. Mr. LANG.

103. Railroad Engineering.—Reconnaissance, preliminary and location surveys, cross-sections, etc. Searles' *Field Engineering*. Two periods, second and third terms. Required of Juniors in Civil and in Mining Engineering. Mr. LANG.

104. Surveying.—Field-work. Use of instruments, compass, level, transit and plane table. Practical work in land surveying, topography, levelling, railroad surveying, working up notes and platting. Two periods. Required of Juniors in Civil and in Mining Engineering. Two periods, second and third terms. Required of Seniors in Mechanical Engineering.

105. Drawing.—Descriptive Geometry, Stereotomy. Text-book, lectures, problems and completed drawings. Two periods, second and third terms. Required of Sophomores in Civil Engineering. Two periods. Required of Juniors in Civil Engineering. Mr. LANG.

106. Bridge Design.—Calculation of stresses, design, specifications and estimate of cost of a wooden roof truss and a steel highway bridge. Three periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

107. Municipal Engineering.—Text-books, lectures. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

108. Surveying.—Field-work. Triangulation and topography, surveys for sewers, water-works, etc. Two periods. Required of Seniors in Civil Engineering. Mr. MANN.

109. Roofs and Bridges.—Determination of stresses in roof and bridge trusses by the analytical method. Merriman's *Roofs and*

Bridges. Original problems. Three periods, first term. Required of Seniors in Civil Engineering. Professor RIDDICK.

110. Hydraulics.—Methods of measuring flow of streams, laws governing flow in pipes and conduits, determination of water-power in streams, testing of hydraulic motors. Text-book, Merriman's *Hydraulics*. Two periods, second and third terms. Required of Seniors in Engineering. Professor RIDDICK.

111. Construction.—Masonry, foundations, railroads, dams, retaining walls, arches, etc. Baker's *Masonry Construction*. Lectures. Two periods, first term. Required of Juniors in Civil and in Mining Engineering. Two periods, second and third terms. Required of Seniors in Civil and in Mining Engineering. Professor RIDDICK.

112. Mechanics of Materials.—Study of stresses in beams, columns, etc. Merriman's *Mechanics of Materials*. Three periods, first term. Required of Seniors in Civil and in Mechanical Engineering. Professor RIDDICK.

113. Road-building.—Text-book on construction of roads, streets and pavements. Lectures on practical road-making in North Carolina. Two periods, first term. Required of Seniors in Civil Engineering. Professor RIDDICK.

114. Astronomy.—Determination of Azimuth, Latitude and Longitude, Time. Comstock's *Astronomy for Civil Engineers*. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

ARCHITECTURE.

115. Architecture.—Building materials, methods of constructing buildings, plans, specifications, bill of materials, estimate of cost, design of buildings. Lectures. Two periods, first term. Required of Sophomores in Civil Engineering. Professor RIDDICK.

116. Architectural Drawing.—Drawings from a building already constructed, design of a dwelling, detail and perspective drawings. Two periods. Required of Sophomores in Civil Engineering. Mr. MANN.

MATHEMATICS.

121. Arithmetic.—Milne's *Standard Arithmetic*. Begin with decimal fractions and complete the subject. Five periods, first term. Required of first year students. Mr. MACCALL and Mr. MANN.

122. Algebra.—Wells' *Higher Algebra*. Up to quadratic equations. Five periods, second and third terms. Required of first year students. Mr. MANN, Mr. LANG and Mr. MACCALL.

123. Advanced Algebra.—Wells' *Higher Algebra*. Begin at quadratic equations; general theory of equations, solution of higher equations, etc. Five periods, first term. Required of all Freshmen and of second year students in Mechanic Arts. Mr. YATES and Mr. MACCALL.

124. Geometry.—Plane and Solid. Wentworth's *Plane and Solid Geometry*. Five periods, second and third terms. Required of all Freshmen and of second year students in Mechanic Arts. Four periods, first term. Required of Sophomores. Mr. YATES.

125. Trigonometry.—Four periods, second and third terms. Required of Sophomores. Mr. YATES.

126. Analytical Geometry.—Nichols' *Analytical Geometry*. Conic sections, higher plane curves, Geometry of three dimensions. Four periods, first and second terms. Required of Juniors in Engineering. Mr. YATES.

127. Calculus.—Osborne's *Elements of Calculus*. Differential and integral, elements of differential equations. Four periods, third term. Required of Juniors. Three periods, first term. Required of Seniors in Engineering. Professor RIDDICK.

128. Mechanics.—Nature and measurement of forces, moments, conditions of equilibrium, moment of inertia, laws of motion, constraining and accelerating forces, dynamics of a rigid body, momentum and impact, work, power, friction, application of principles to various engineering problems. Three periods. Required of Juniors in Engineering. Professor DICK and Mr. LANG.

129. Book-keeping.—The work in the text-books supplemented by numerous original examples and sets for practice. One period. Required of Freshmen. Mr. MANN and Mr. MACCALL.

COURSES IN MECHANICAL ENGINEERING AND MECHANIC ARTS.

The regular Four Year Course in Mechanical Engineering is intended to fit the student for positions of responsibility in engineering work, and also to furnish him with a basis to carry on more advanced engineering studies. It treats of the development and transmission of power, the design and construction of machines, and the calibration and efficiency tests of machinery, boilers and engines.

The Two Year Course is offered to students who wish to become machinists, draughtsmen, stationary engineers or dynamo tenders.

MECHANICAL ENGINEERING.

Equipment.

The drawing and recitation-rooms and shops of the Department of Mechanical Engineering are in the Engineering Building. They are of ample size and well lighted, and are arranged to be heated either by the exhaust steam from the engine or by live steam. On the first floor are a recitation-room, machine shop, forge shop, wood-turning shop, carpenter shop, office and library. On the second floor are the office, three drawing-rooms and a wood-finishing room, in which are kept on file various scientific and technical journals, the trade circulars of prominent engineering firms, drawings and photographs of machinery, and tabulated data, as well as a large number of engineering books, the use of which is required.

The department is provided with the necessary apparatus for making boiler and engine tests and for other work of an experimental character. The equipment consists of a two-horse-power engine, a ten-horse-power engine, a one-horse-power gasoline engine (all of which were built by students), a twenty-five-horse-power Woodbury engine, a Wheeler surface condenser, connected with a $4\frac{1}{2} \times 6 \times 6$ Blake air-pump, an Ericsson hot-air pumping engine, apparatus for making analyses of flue gases, a fuel calorimeter, a water motor, a Worthington water-meter, a complete Westinghouse air-brake equipment, a New York air-brake equipment in section, friction brakes, weirs, indicators, planimeters, slide rules, thermometers, calorimeters, gauges, tanks, scales, a Crosby gauge tester, and other apparatus for making tests.

The boiler-house is equipped with one thirty-horse-power and two forty-horse-power horizontal return tubular boilers and two seventy-five-horse-power Babcock and Wilcox boilers and several pumps, all of which are available for experimental purposes.

The shops are equipped as follows:

The wood-working equipment consists of fifteen double carpenters' benches, which accommodate thirty students, and all necessary tools for each bench; thirty 12-inch turning lathes, each lathe being fully equipped with turning tools; a rip and a cut-off saw bench, foot-feed, with dado attachment; a double revolving rip and cut-off saw bench, with dado attachment; a 20-inch surface planer; a 12-inch hand-jointer or buzz planer; a universal boring machine; a $6\frac{1}{2}$ -inch tenoning machine with cope heads; a 6-inch sash and blind sticker; a 30-inch band saw; a jig saw; a shaper or edge moulding machine, with a very complete set of moulding cutters; a 38-inch grind-stone;

a wood trimmer; an adjustable mitre-box; a steam glue-heater and a large assortment of screw and of bar clamps, both iron and wooden.

The forge shop is a well lighted and ventilated, neatly paved room, 30 x 40 feet. It is equipped with twenty-eight forges, blast being furnished from a Sturtevant blower; two emery and two buffing wheels; an overhead exhaust system, operated by a 60-inch Sturtevant exhaust fan, for removing smoke from the fires; anvils and all necessary hand tools.

The machine shop contains a 16-inch Davis and Eagan lathe with 10-foot bed, a 14-inch Windsor lathe with 5-foot bed, a 13-inch Barnes lathe with 5-foot bed, a 14-inch Putnam lathe with a 4-foot bed, a 14-inch Flather lathe with 6-foot bed, three 14-inch lathes with 6-foot bed (built in the College shops by students), an 18-inch Prentiss shaper, a 24-inch upright Bickford drill press, a 32-inch American drill press, a Brown and Sharp universal milling machine with all attachments, a 20-inch by 5-foot Pease planer, one large and one small emery tool-grinding machine, a 6-inch Curtis & Curtis pipe threading and cutting machine, a Greenwich arbor press and an electric center grinder. The machines have full equipment of chucks, rests and tools. The benches are well provided with vises.

The tool-room is well equipped with the necessary hand and pipe tools.

The power for the shops is furnished by a twenty-five horse-power Woodbury engine. When the shops are running one of the students has charge of the engine.

Subjects of Instruction.

135. Free-hand Drawing.—Work in the use of the pencil; technical sketches of objects, usually parts of a machine. Two periods, first term. Required of all Freshmen and first year students. Mr. ST. AMANT.

136. Elementary Mechanical Drawing.—Use of instruments, geometric drawing, isometric and cabinet drawing, elementary projections, drawings made to scale from working sketches of pieces of a machine. Two periods, second and third terms. Required of all Freshmen and first year students. Mr. ST. AMANT.

137. Descriptive Geometry Drawing.—Elementary principles; cylinders, cones and prisms, intersections, development of surfaces. Miscellaneous problems. Two periods, first term. Required of Sophomores in mechanical, electrical and mining engineering. Mr. WALES.

139. Mechanical Drawing.—Working sketches and drawings of machine parts from the model. Tracing and blue-printing. Elementary machine design. Two periods, second and third terms. Required of Sophomores in Mechanical, Electrical and Mining Engineering. Mr. WALES.

140. Machine Design.—Study of the communication of motion by gear wheels, cams, belts and link-work; automatic feed, parallel and quick motions. Epicyclic trains. Calculations and working drawings of machine parts, such as fastenings, hangers, couplings and bearings. Two periods. Required of Juniors in Mechanical Engineering. Mr. WALES.

141. Machine Design.—Calculations and working drawings of types of engines, boilers, pumps, condensers and shafting. Two periods, first term. Three periods, second and third terms. Required of Seniors in Mechanical Engineering. Mr. WALES.

146. Wood-work.—Use of bench tools, working from drawings, lining, sawing, planing. Practice in making simple exercises in wood. Elementary exercises in wood-turning. One period. Required of Freshmen. Two periods. Required of first year students. Mr. BRAGG and Mr. DEAL.

147. Forge-work.—Exercises in working with iron. Welding. Uses and care of forge tools and fires. One period. Required of Freshmen and first year students. Mr. DEAL.

148. Forge-work.—Exercises in working with steel. Tempering. Case-hardening. One period, first term. Required of Sophomores in Mechanical, Electrical and Mining Engineering. Mr. DEAL.

149. Pattern-making.—Exercise in making patterns and moulds of machine parts. One period, second and third terms. Required of Sophomores in Mechanical, Electrical and Mining Engineering. Mr. BRAGG.

150. Machine-shop Work.—Bench and machine-work. Exercises in chipping and filing. Exercises in lathe-work, boring, reaming, drilling, planing, milling and shaper-work. Two periods. Required of Juniors in Mechanical and Electrical Engineering. Six periods. Required of second year students in Mechanic Arts. Mr. PARK.

151. Machine-shop Work.—Making the parts of some machine, or of an engine. Making tools, such as taps and reamers. Laying out work. Three periods. Required of Seniors in Mechanical Engineering. Mr. PARK.

152. Mechanical Technology.—Classification and uses of wood-working and forging tools and machines. Methods of wood-working

and forging. Care of belting and shafting. One period. Required of Freshmen and of first year students in Mechanic Arts. Mr. BRAGG.

157. Boilers.—Steam generation: types, care and management; fittings and appliances: corrosion and incrustation: combustion of fuel. Boiler power. Two periods, first term. Required of Juniors in Mechanical Engineering, and of Seniors in Electrical and in Mining Engineering. Professor DICK.

158. Steam Engines.—Types—simple and compound, and triple expansion, automatic, Corliss, rotary. Care and management. Indicators, indicated and brake horse-power. Condensers. Two periods, second term. Required of Juniors in Mechanical Engineering and of Seniors in Electrical and Mining Engineering. Professor DICK.

159. Valve Gears.—Plain slide valve, balance valve, Corliss and other form valve gears, link and radial reversing gears. Shaft governors. Bilgram and Zenner valve diagrams. Two periods, third term. Required of Juniors in Mechanical Engineering and of Seniors in Mining Engineering. Professor DICK.

161. Power Plants.—Mechanical Engineering of power plants. Selection and arrangement of machinery, appliances, piping. Two periods, first term. Required of Seniors in Mechanical Engineering. Professor DICK.

162. Gas Engines.—Theory of the gas engine. Various types of gas, gasoline and oil engines. Brake and indicated horse-power; efficiency. Gas producers. Two periods, second term. Required of Seniors in Mechanical Engineering. Professor DICK.

163. Refrigeration.—Various types of ice-making machinery. Compression and absorption systems. Compressed air machines. Two periods, third term. Required of Seniors in Mechanical Engineering. Professor DICK.

165. Pumping Machinery.—Direct acting, fly-wheel and duplex pumps. Pumping engines. Water-works machinery. Duty and efficiency. Hydraulic engines. One period, second term. Required of Seniors in Mechanical Engineering. Professor DICK.

166. Heating and Ventilation.—Steam, hot water, furnace and blower systems of heating. Heating boilers. Ventilation. Design of heating and ventilating system. One period, second and third terms. Required of Seniors in Mechanical Engineering. Professor DICK.

167. Materials of Engineering.—The manufacture and uses of different metals,—cast and wrought iron and steel, copper, brass and other alloys,—used in engineering. One period, third term. Required of Seniors in Mechanical Engineering. Mr. WALES.

168. Steam Engineering Laboratory.—Practice in engine running; valve-setting; calibration of instruments; testing gauges and lubricants. Use of indicators and calorimeters. Boiler tests; engine tests. One period, second and third terms. Required of Seniors in Mechanical Engineering. One period, first term. Required of Seniors in Electrical Engineering. One period, third term. Required of second year Mechanic Arts and applied electrical students. Professor DICK and Mr. WALES.

171. Mechanical Drawing.—Sketching and drawing of machine parts and machines. Detail working drawings. Tracing and blue-printing. Two periods. Required of second year students. Mr. DEAL.

172. Mechanical Technology.—Classification and use of hand-tools and machines usually found in the pattern shop, foundry, and machine shop. Materials used and methods of carrying on work in these shops. Practical problems in estimating cost and material required to complete a piece of work; arrangements and sizes of belting, pulleys and shafting. Two periods. Required of second year Mechanic Arts students. Mr. WALES.

173. Steam and Steam Machinery.—Descriptive study of the machinery of steam power plants—engines, boilers, condensers, pumps, piping. Care and management. Combustion of fuels. Indicators; indicated, brake and boiler horse-power problems. Two periods. Required of second year students in Mechanic Arts and Applied Electricity. Professor DICK.

COURSE IN ELECTRICAL ENGINEERING.

Object.—The four year course is designed for those who wish a thorough and practical training in Electrical Engineering. Only a most thorough training in the fundamental facts and principles of the science of electricity and magnetism will be satisfactory for a branch of engineering which is advancing so rapidly. A great deal of attention is, therefore, paid to good text-book work, and as soon as the first principles of the science are mastered by the student, he is given a series of experiments in which careful measurements with exact instruments are made.

The department, as can be seen from the list of apparatus, is well equipped with dynamos, electric motors and testing instruments for experimental work and for investigation of problems in electrotechnics. During the Senior year a course in designing the various electrical machines is given.

A two year course in Applied Electricity is offered to those who wish to fit themselves for positions as dynamo-tender, motorman, or electrician.

IV. The Four Year Course in Electrical Engineering, leading to the degree of Bachelor of Engineering.

Freshman Year.

PHYSICS.

Equipment.

The recitation-rooms and laboratories of the Department of Physics are situated in the basement of the principal building. They are spacious and well lighted.

The equipment consists of apparatus for illustrating the principles of physical science and for instruction and practice in experiments, measurements and tests.

Subjects of Instruction.

176. Elementary Physics.—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Four periods. Required of Freshmen. Professor PAINE.

177. Elementary Lessons in Electricity and Magnetism.—Two periods. Required of Sophomores. Professor PAINE.

178. Physical Laboratory.—Measurements of length, area and volume; determinations of density, laws of forces and velocities; pendulum. One period. Required of Sophomores in Electrical Engineering. Mr. ADAMS.

179. Electrical Laboratory.—Use of laboratory instruments. Measurement of resistance, current and electro-motive force. Use of condensers. Electrical testing of lines for insulation and grounds. Magnetic properties of iron. Two periods. Required of Juniors in Electrical Engineering. Mr. ADAMS.

ELECTRICAL ENGINEERING.

Equipment.

The electrical engineering laboratory is a small brick building 30 by 50. It contains the electric light plant, consisting of a 35-horse-power automatic Skinner engine, a 11.5 K. W. 110-volt Westinghouse dynamo, a 30 K. W. 3-phase 550-volt Westinghouse alternator and a 20 K. W. 2-phase 110-volt Lincoln alternator. The laboratory contains in addition to this one 6-light T. H. arc machine, one 1-horse-power Sprague motor, one 8 K. W. 110-volt Siemens & Halske dynamo, connected in such a way as to give 3-phase currents, one 2-horse-power 3-phase 110-volt Gen. Elect. Co. motor, one 2 K. W. 110-volt LaRoche alternator. It also contains transformers, condensers, arc lamps, circuit breakers, etc.

The department possesses a small library of standard books on all branches of physics and electrical engineering.

183. Dynamo Machinery.—A study of direct current dynamos and motors. Efficiency. Characteristic curves. Required of Juniors in Mechanical and Electrical Engineering. Two periods. Professor PAINE.

184. Alternating Currents of Electricity.—Principles of alternating currents. Alternating current generators and motors. Static and rotary transformers. Three periods, first term. Required of Seniors in Electrical Engineering. Professor PAINE.

185. Electric Power Transmission.—Direct current systems. Power transmission by single and polyphase alternating currents. Long distance, high potential lines. Three periods, second term. Required of Seniors in Electrical Engineering. Professor PAINE.

186. Electric Light and Railway Systems.—The design and operation of lighting and railway plants. Estimates of costs. Three hours, third term. Required of Seniors in Electrical Engineering. Professor PAINE.

189. Electrical Engineering Laboratory.—Laboratory methods. Calibration of electrical measuring instruments. Study of direct current apparatus. Characteristic curves. Photometry. Efficiency of direct current generators and motors. Three periods per week, first term. Required of Seniors in Electrical Engineering. Mr. ADAMS.

190. Electrical Engineering Laboratory.—Characteristic curves of alternating current generators. Study of inductance and capacity. Efficiency of alternating current apparatus, including motors, generators and transformers. Four periods per week, second and third terms. Required of Seniors in Electrical Engineering. Mr. ADAMS.

191. Electrical Design.—The design of magnets, rheostats, dynamos and transformers. One period, first term. Two periods, second and third term. Required of Seniors in Electrical Engineering. Mr. ADAMS.

192. Electrical Engineering Practice.—The application of electricity for lighting and power. Electricity in cotton mills and machine shops. Two periods, third term. Required of Seniors in Electrical Engineering. Professor PAINE.

195. Physics.—The properties of matter. Mechanics. The principles of the simple machines. Five periods per week. Required of second year students in Applied Electricity and in Mechanic Arts. Professor PAINE.

196. Electricity.—Principles of the electric circuit. Batteries. Electro-magnets. Dynamos. Motors. Electric bell, telephone and telegraph systems. Five periods per week, second term. Required of second year students in Applied Electricity and in Mechanic Arts. Professor PAINE.

197. Electrical Laboratory.—Management of dynamos and motors. Care of station equipment. Study of arc lamps. Transformers. Five periods per week, third term. Required of second year students in Applied Electricity and in Mechanic Arts. Mr. ADAMS.

198. Electrical Construction.—Bell wiring. Electric light wiring. Coil winding for dynamo and motor fields. Armature winding. Repair of electrical apparatus. Two periods per week, second and third terms. Required of second year students in Applied Electricity. Mr. ADAMS.

COURSE IN MINING ENGINEERING.

The course in Mining Engineering is intended to give the student the preliminary training necessary to enable him to enter upon a career in mining. To this end he is given instructions in English, History, Political Economy, and Mathematics, which are fundamental to the more technical studies and to the greatest usefulness as a citizen. Instruction in Physics and Chemistry, Mineralogy and Geology, Surveying, Shop-work, Drawing, Machinery and Steam affords the scientific and engineering knowledge upon which the successful work of the miner must depend. The more technical portion of the instruction includes ore dressing, metal-working, ventilation, drainage, and illumination of mines.

V. The Four Year Course in Mining Engineering, leading to the degree of Bachelor of Engineering.

MINING AND METALLURGY.

206. Mining.—Lectures on methods of mining, including prospecting, sinking, sloping, hoisting, pumping, and ventilating; the location of mining claims, mine fires, fire-damp and dust explosions; inundations; rescue and relief of men. Four periods, second and third terms. Required of Seniors in Mining. Dr. SMITH.

207. Ore Dressing.—Furnishing products for metallurgical treatment. Lectures on concentrating machinery and concentrating and enriching ores by mechanical means. Four periods, first term. Required of Seniors in Mining. Dr. SMITH.

208. Metallurgy.—Introductory; combustion, calorific calculations, fuels, refractory materials, furnaces, etc. Iron and steel: the various iron and steel processes, metallography, heat-treatment, mechanical treatment, chemistry. Copper: roasting, smelting, refining, wet and electrolytic processes. Gold: stamp milling, amalgamation, cyanide and chlorination processes. The metallurgy of lead and the lesser metals. Two periods, second and third terms. Required of Seniors in Mining and Chemistry. Dr. SMITH.

209. Assaying.—Ricketts & Miller's *Notes on Assaying*. Lectures and laboratory practice in the crushing and sampling of ores; the assaying of gold, silver, lead and other ores; corrected assays; bullion assays; extraction tests. One period, second and third terms. Required of Seniors in Mining. Dr. SMITH.

GEOLOGY AND MINERALOGY.

211. Geology.—Scott's *Introduction to Geology*. In the first part of the course the principles of Dynamical Geology, the forces which have modified and are still modifying the earth are considered. The results of these forces are seen and studied in the structure of the earth and in the phenomena of volcanoes, earthquakes, faults and folds, crust movements, etc. In the latter part of the course the life history of the earth as recorded in the rocks is studied. Special attention is given to the commonly occurring rocks and ores, and the main features of the geology of North Carolina form an integral part of the course. The text is supplemented by lectures. Two periods. Required of Juniors in Mining and in Chemistry. Dr. WALKER.

212. Mineralogy.—Moses & Parsons' *Mineralogy*. Descriptive and determinative mineralogy; blowpipe analysis and the study of the more important economic minerals, their properties, uses and

methods of determination. Recitations and laboratory practice. Four periods, first term. Required of Seniors in Mining and in Chemistry. Dr. SMITH.

COURSES IN INDUSTRIAL CHEMISTRY.

In harmony with the general purposes for which the College was founded, the course in chemistry is arranged to prepare young men for careers in the analytical or the operating departments of the various chemical industries. To this end the training given in general, organic, and analytical chemistry is supplemented by instruction in technical chemical analysis and in the applied chemical subjects bearing more directly on the course the student has selected. The fundamental principles of engineering, machinery, etc., which are almost indispensable to the successful management of chemical plants, are taught, together with the cultural studies included in the other courses.

Raleigh as a Chemical Center.

There are in the city of Raleigh and its vicinity several manufacturing plants to which, through the courtesy of the owners, the students in chemistry, in company with the teaching staff of the department, make visits each year. These include plants for the manufacture of illuminating gas, sulphuric acid, fertilizers, and artificial ice; for the extraction of cotton-seed oil; for the dyeing of cotton goods and for the tanning and dressing of leather.

The chemical laboratories of the North Carolina Department of Agriculture and of the North Carolina Agricultural Experiment Station are located in Raleigh, and through the courtesy of the officials in charge of these departments our students are welcomed whenever they desire to visit them.

The State Museum is open to the public each day from 9 o'clock A. M. to 5 o'clock P. M., and among other things contains a very excellent collection of the State's minerals, ores, and building stones.

Chemical Equipment.

The laboratories of general and of analytical chemistry are located in the main building of the College, and are well furnished. The tables are of yellow heart-pine, with oak tops. Each student is provided with water, gas, all necessary reagents, ample working space, together with lockers for the storage of apparatus, etc. The quantitative laboratory is located on the first floor and will accommodate

thirty-two students. The laboratory for introductory chemical work is in the basement and will accommodate seventy students.

The chemical library is well supplied with reference books. It receives the leading chemical journals and owns complete sets of many of the most important of them.

Graduates in Chemistry.

The chemical graduates of the College are engaged in the following lines of chemical work: Manufacture of illuminating gas, manufacture of sulphuric acid, manufacture of fertilizers, manufacture of tobacco products, refining and testing oils, metallurgy of iron, metallurgy of copper, dyeing of cotton goods, in agricultural experiment stations, in State departments of agriculture, and in teaching chemistry. These are employed in North Carolina and nine other States.

CHEMISTRY.

216. Inorganic Chemistry.—Remsen's *College Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS, Mr. HASKELL and Dr. WALKER.

217. Inorganic Chemistry.—Laboratory work. Remsen and Randall's *Laboratory Guide*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. GARDNER.

218. Organic Chemistry.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Two periods. Required of Juniors in Chemistry. Mr. HASKELL.

219. Organic Chemistry.—Laboratory work. Gattermann's *Practical Methods of Organic Chemistry*, translated by Shober. The typical transformations and syntheses of the aliphatic and aromatic groups are taken up. The student thus becomes familiar with the reactions and properties of the more important organic compounds. Some of the more common dye-stuffs are prepared synthetically. Three periods, first term. Five periods, second and third terms. Required of Seniors in Chemistry. Mr. HASKELL.

220. Analytical Chemistry.—Treadwell's *Qualitative Analysis*. A discussion of the principles involved in chemical analysis, together with laboratory work. The student is taught to detect the presence of the common metallic elements, as well as that of the acids, in unknown substances. Five periods, first and second terms. Required of Juniors in Chemistry. Five hours, first and second terms. Elective for Seniors in Mining. Dr. SMITH.

226. Analytical Chemistry.—Clowes and Coleman's *Quantitative Analysis*. Gravimetric and volumetric analysis, special attention being given to the analysis of substances of technical importance. Four periods. Required of Seniors in Chemistry. Dr. SMITH.

227. Analytical Chemistry.—A brief course in quantitative analysis, arranged with special reference to students in Mining. Five periods, third term. Elective for Seniors in Mining. Dr. SMITH.

232. Agricultural Chemistry.—Ingle's *Agricultural Chemistry*. A study of the facts obtained by the application of chemistry and chemical methods of investigation to agriculture. The laws of plant and animal nutrition, the economical feeding of plants and animals, and the maintenance of the fertility of the soil are considered from the chemical standpoint. Two periods. Required of Juniors in Chemistry. Professor WITHERS.

233. Industrial Chemistry.—Thorpe's *Outlines of Industrial Chemistry*. A discussion of the processes and principles involved in the more important chemical industries. A discussion of the materials of engineering. Two periods. Required of Seniors in Chemistry. Professor WITHERS.

DYEING.*

236. Dyeing.—Lectures. Fraps' *Principles of Dyeing*. The textile fibres are studied. Special attention is paid to the cotton fibre, although the other fibres are studied to an extent sufficient to familiarize the student with their uses and applications. The steps necessary in preparing the fibres for dyeing, bleaching and scouring, etc., are taken up and then the application of each class of dyes to the different fibres. Typical dyes of each class are taken and studied. The student then takes up color matching, color mixing and dye testing; special attention being paid to these last courses. Finally the different methods of printing, dyeing mixed goods and mercerization are studied. Two periods. Elective for Juniors in Chemistry. Mr. HASKELL.

*For further information in regard to dyeing, see Course in Dyeing, under head of Textile Courses.

237. Dyeing Laboratory.—The experiments are intended to follow the lecture course, thus making the student familiar by actual trial tests with facts brought out in the lectures. These tests are made with small skeins of yarn. The student learns the different methods of dyeing which are applicable to cotton, those which are applicable to wool, etc. Comparative tests as to fastness, to washing, to light, to dilute acids, alkalies and to rubbing are made, and the samples showing each test are kept in a scrap-book. The different styles of printing are studied and special methods for dyeing. Two periods. Elective for Juniors in Chemistry. Mr. HASKELL.

BACTERIOLOGY.

251. General Bacteriology.—Lectures and laboratory work on the nature, physiology, morphology, and economy of bacteria, with especial reference to home sanitation, disinfection, and to the relation of bacteria to disease in plants and animals. The student becomes familiar in the laboratory with methods of culture and investigation in bacteriology. Two periods. Elective for Juniors in Chemistry. Professor STEVENS.

ENGLISH.

271. English Composition.—A drill upon the forms of the language, the correct relation of words, the sentence, the paragraph. Daily written exercises. Three periods. Required of first year students. Dr. SUMMEY and Mr. MASON.

272. Introductory Composition and Rhetoric.—This course in the fundamentals of Rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill upon grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods a week. Required of Freshmen. Professor HILL, Doctor SUMMEY and Mr. MASON.

273. Rhetoric, Criticisms, Essays.—The student is taught the essentials of a good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Two periods, second term. Professor HILL, Doctor SUMMEY and Mr. MASON.

274. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of many exercises. Required of Seniors. Two periods, third term. Professor HILL.

275. American Literature.—By means of an introductory text and by much reading, students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Two periods, third term. Required of Sophomores. Professor HILL, Doctor SUMMEY and Mr. MASON.

276. English Literature.—The development of English Literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two periods, third term. Required of Juniors. Two periods, first and second terms. Required of all Seniors. Professor HILL.

HISTORY.

281. American History.—By means of a text-book supplemented by lectures and frequent assignment of topics for special study, students are in this course familiarized with the leading facts in the history of the United States. Two periods. Required of first year students. Professor PHELPS.

283. English History.—The first term of the Junior year is devoted to a study of English history. The text is supplemented by lectures on important periods. Two periods, first and second terms. Required of Juniors. Professor HILL.

POLITICAL ECONOMY.

296. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. Two periods. Required of Seniors. President WINSTON.

MILITARY SCIENCE.

299. Drill.—Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours in the afternoon. Required of all classes. Commandant and officers of the Battalion.

300. Tactics.—Theoretical instruction in the Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies, Manual of Guard Duty, Outposts, etc. One period. Required of Juniors. Captain PHELPS.

TEXTILE COURSES.

- VII. The Four Year Course in Textile Industry.**
- VIIa. The Two Year Course in Textile Industry.**
- VIII. The Four Year Course in Dyeing.**

THE TEXTILE DEPARTMENT.

The Textile Department is located in a new building recently erected for its use. The instruction given in this department is in the theory and practice of cotton manufacturing. The building, which is a typical cotton mill, is fully equipped with all the necessary machinery for manufacturing cotton yarns and fabrics from the bale to the finished product. The student is taught the theory of cotton spinning, weaving, designing, and dyeing. In connection with the theory, he learns the practical operation of the cotton machinery used in carrying on the different processes. Further, he learns such essential practical details as enable him to adjust and fix the machinery so as to produce the proper results. As a result of this training, each student produces for himself cotton yarns of different numbers, cotton fabrics of different kinds from his own designs and choice of colors.

TEXTILE INSTRUCTION.

In this department two courses of instruction are offered, the Four Year Course, leading to the degree of Bachelor of Engineering, and the Two Year Course. The Four Year Course combines with the textile instruction certain practical and theoretical subjects which enable the student to understand better his special work. The textile instruction begins in the Sophomore year and is the principal work of the Junior and Senior years. The Two Year Course is offered to those mature students who cannot spend the time required for the Four Year Course. To be successful in the Two Year Course the student should have had a good preparation in his early studies, especially in mathematics, and some practical experience. To enter this course the student is required to pass the full entrance examinations for the Freshman Class in College, and must satisfy the professor in charge of his ability to go on with the work. Combined with the textile instruction are certain practical subjects which aim to increase the skill of the student.

The textile instruction given is of a practical nature, and covers the entire ground of cotton manufacturing. Its object is to prepare the student for a useful career in this industry. There is a demand from the mills in this and other States for young men technically trained in the manufacture of cotton goods, especially of the finer grades. That the graduates are meeting with success in this industry is shown by the positions held by them. Among these are president, secretary and treasurer, manager, superintendent, designer, overseer of weaving, mill architect, machinery salesman. In fact, the graduates have gone into almost every branch of cotton manufacturing, and have met with success. All have received the same training. The point to which each has advanced has depended upon the ability to deal with the general problems of manufacturing.

TEXTILE BUILDING AND EQUIPMENT.

The Textile Building is located on the west campus, just beyond the Horticultural Building. It is a two-story brick building 125 x 75 feet, with a basement. Throughout, its construction is similar to a cotton mill, being an illustration of standard construction in this class of buildings. The basement is fitted up with a laboratory and classroom for instruction in dyeing and with dyeing machinery. On the first floor are located the hand and power looms and the necessary warp-preparation machinery. The carding and spinning machinery is located on the second floor. Electricity is used as motive power, the machinery of each department in the building being driven by a separate motor. The machinery equipment consists of the latest types of cotton mill machinery manufactured by American builders. The following is a list of the machines and their makers:

Carding Department.

Opening-room.—One combination opener and breaker lapper, made by Kitson Machine Co., Lowell, Mass. One 40-inch single beater finisher lapper, with patent carding beater, made by Kitson Machine Co., Lowell, Mass.

Carding-room.—One 40-inch revolving flat card, 112 flats, with coiler, made by Mason Machine Works, Taunton, Mass. One 40-inch revolving flat card, 110 flats, with coiler, made by Whitin Machine Works, Whitinsville, Mass. One 40-inch revolving flat card, 110 flats, with coiler, made by Saco and Pettee Machine Shops, Newton Upper Falls, Mass. One single railway head, with coiler, leather rolls, made by Whitin Machine Works, Whitinsville, Mass. One drawing frame, four deliveries, leather rolls, made by Whitin Machine Works, Whi-

tinsville, Mass. One railway head with coiler, metallic rolls, and improved evener motion, made by Saco and Pettie Machine Shops, Newton Upper Falls, Mass. One drawing frame, four deliveries, metallic rolls, made by Saco and Pettie Machine Shops, Newton Upper Falls, Mass. One 36-spindle slubber for 11 x 5½-inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I. One 48-spindle intermediate roving frame for 9 x 4½-inch bobbin, made by Saco and Pettie Machine Shops, Biddeford, Me. One 64-spindle fine roving frame for 7 x 3½-inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I. One 80-spindle jack roving frame for 6 x 2½-inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I.

Spinning Department.

Spinning-room.—One 64-spindle spinning frame for warp; one 80-spindle spinning frame for filling, made by Whitin Machine Works, Whitinsville, Mass. One 80-spindle spinning frame for warp; one 80-spindle spinning frame for filling, made by Mason Machine Works, Taunton, Mass. One 80-spindle spinning frame for warp; one 80-spindle spinning frame for filling, made by Fales & Jenks Machine Co., Pawtucket, R. I. One 64-spindle spinning frame for warp; one 64-spindle spinning frame for filling, made by Saco and Pettie Machine Shops, Biddeford, Me.

Spooling, Twisting, and Winding.—One 40-spindle spooler, made by Draper Company, Hopedale, Mass. One 40-spindle spooler, made by Whitin Machine Works, Whitinsville, Mass. One 32-spindle spooler, made by Easton & Burnham, Pawtucket, R. I. One 48-spindle twister, made by Whitin Machine Works, Whitinsville, Mass. One 72-spindle twister, one-half for wet, one-half for dry twisting, made by Draper Company, Hopedale, Mass. One 48-spindle twister, one-half for wet, one-half for dry twisting, made by Fales & Jenks Machine Co., Pawtucket, R. I. One 50-spindle reel, one-half live, one-half dead spindles, made by D. A. Tompkins Co., Charlotte, N. C. One 40-spindle reel, made by Draper Company, Hopedale, Mass. One 6-spindle universal winding machine, made by Universal Winding Co., Boston, Mass. One section warper, 400 ends, made by Draper Company, Hopedale, Mass.

Weaving Department.

Warp Preparation.—One 12-spindle bobbin winding machine, made by Jacob K. Altemus, Philadelphia, Pa. One beaming machine,

made by Lewiston Machine Co., Lewiston, Me. One beaming machine complete, made by the T. C. Entwistle Co., Lowell, Mass.

Looms.—One Northrop-Draper print-cloth loom; one Northrop-Draper sateen loom; one Northrop-Draper loom with 20-harness dobby, made by Draper Company, Hopedale, Mass. Two high-speed sheeting looms, made by Kilburn & Lincoln, Fall River, Mass. One sheeting loom, one 12-harness dobby loom, made by Whitin Machine Works, Whitinsville, Mass. One print-cloth loom, one 2 x 1 box loom, one 24-harness dobby loom, made by Mason Machine Works, Taunton, Mass. One Crompton 4 x 1 box gingham loom, one Crompton 4 x 1 box loom with 20-harness dobby, one Crompton single-box loom with 400-hook Jacquard machine, one Knowles Gem loom with 4 x 4 box, one Stafford single-box loom with 20-harness dobby, made by Crompton & Knowles Loom Works, Worcester, Mass. One 2 x 1 box loom with 600-hook Jacquard machine, made by Joseph Battles Manufacturing Co., Lawrence, Mass.

Dyeing Department.

The dyeing department is located in the basement of the Textile building, and consists of an experimental dyeing laboratory with desk room sufficient for thirty students, a lecture-room, a stock-room, an office and a room 70 x 50 feet which is being fitted up as a practical dye-house.

The experimental laboratory is fitted out with apparatus for carrying out various chemical operations necessary for dyeing work and also for dyeing of small test samples, color-matching, etc. The dye-house is fitted out with dyeing machinery, a steam kettle, a steaming box, a printing machine, a hydro extractor and a drying closet.

Through the kindness of the following dye-stuff dealers the College has a collection of dye-stuffs amounting to approximately nine hundred samples. As each new dye is put out the department is regularly supplied with it, and the student thus has an opportunity of becoming familiar with the latest products for commercial work. The firms to whom the department is indebted in the past are as follows:

Wm. J. Matheson & Co., Ltd., N. Y.

Farbenfabriken of Elberfeld Co., N. Y.

H. A. Metz & Co., N. Y. (successors to Victor Koechl & Co.).

Berlin Aniline Works, N. Y.

A. Klipstein & Co., N. Y.

C. Bischoff & Co., N. Y.

Kuttroff, Pickhardt & Co., N. Y.
 New York and Boston Dyewood Co., N. Y.
 Schoelkoff, Hartford & Hanna Co., Buffalo, N. Y.
 F. E. Atteaux & Co., Boston, Mass.
 Read, Holliday & Sons, Ltd., N. Y.
 Societe Anonyme des Matieres, Colorantes, Paris.
 O. S. Janney & Co., Philadelphia.
 Geisenheimer & Co., N. Y.

Power and Power Transmission.

One 30-horse-power 3-phase 550-volt motor, made by General Electric Co., for driving carding and spinning machinery.

One 15-horse-power 3-phase 550-volt motor, made by General Electric Co., for driving weaving machinery.

Pulleys,, shaftings, hangers, and couplings, made by Jones & Laughlins, Ltd., Pittsburg, Pa.

Belting, made by Faerweather & Ladew, New York City, and Maloney-Bennett Belting Co., Chicago, Ill.

Heating Plant.

Steam Coils and Blowing Fan, made by B. F. Sturtevant Co., Boston, Mass.

VII. The Four Year Course in Textile Industry, leading to the degree of Bachelor of Engineering.

Freshman Year.

Description of Subjects.

301. Carding and Spinning.—Lectures and recitations ; practice in operating card and spinning-room machinery. Cotton ; classifying the plant, its growth ; varieties ; ginning ; baling and marketing the raw staple. Cotton at the mill ; selecting and mixing. Openers and lappers ; card ; sliver lap machines ; ribbon lap machines ; combers ; railway-heads ; drawing-frames ; slubbers ; intermediates ; speeders ; jacks. Ring spinning-frames and mules. Spoolers and warpers. Twisters ; reels ; cone-winders. Construction and functions of each machine ; making the various calculations. Drafts ; speed of parts ; production. Producing yarns of different counts, single and ply. Testing yarns for breaking strength and elasticity. Required of Sophomores, Juniors and Seniors in the four year course and of first and second year students in the two year course. Professor WILSON.

302. Weaving.—Lectures and practice in warp preparation, operating and fixing looms, cloth finishing machinery. Warp preparation ; pin frame warper ; section warper ; beam warper ; construction of beam warper, stop motion, measuring motion, creel ; pattern warp making ; long and short chain beamers. Slashing ; steam cylinder slasher ; hot air slasher ; construction of slasher ; creel ; cylinders ; immersion roll ; squeeze rolls ; drying fan ; separator rolls ; winding yarn on beam ; cone drive ; slow motion ; measuring and cut marking motion. Sizing ; construction of size kettle ; size mixing and boiling ; division of sizing ingredients ; values of ingredients ; sizing receipts harnesses ; drawing in, and putting warps in looms. Looms ; confor light, medium, and heavy sizing. Loom-mounting ; reeds and struction of plain loom ; principal movements in weaving ; let-off and take up motions ; filling stop motion ; warp stop motion. Cams and their construction. Magazine looms ; construction and advantages. Drop box looms ; chain building for box looms ; changing boxes to have easy running loom ; construction and value of multipliers ; timing and fixing box motions. Pick and pick-looms. Box-chain, and multiplier-chain building, arrangement of colors in boxes to give easy running loom. Ball and shoe pick motion. Construction and fixing of head motion. Dobby ; single and double action ; construction and fixing of dobbie ; extra appliances necessary for weaving leno, towel, and other pile fabrics. Value of easers ; half-motion ; and jumper attachment for leno. Springs and spring-boxes. Pattern chain building. Jacquard, single and double lift ; construction and tie up. Weave-room calculations : speed and production calculations ; relative speed of looms ; counts of cotton harness. Finishing ;

inspection of cloth; singeing and brushing; calendaring; tentering; folding and packing for the market. Equipment necessary for warp preparation, weaving, finishing; approximate cost of production of fabrics in the different processes. Required of Juniors and Seniors in the Four Year Course and of first and second year students in the Short Course. Mr. NELSON.

303. Textile Designing.—Lectures and practice in designing, fabric structure and cloth analysis. Designing: method of representing weaves on design paper. Foundation weaves; plain; twill; satin. Ornamentation of plain weave; color effects on plain weave. Derivative weaves: plain and fancy basket weaves; warp and filling rib weaves. Broken twills; curved twills; corkscrew twills; entwining twills. Granite weaves; satin shading. Combination of weaves; figured weaving on plain ground. Fancy satin and figured stripes on plain ground. Spots arranged in different orders on plain, twill, satin ground. Imitation leno; honey-comb weaves. Bedford cords and combinations with other weaves. Wave designs; pointed twills; diamond effects. Plain and fancy piques. Double plain; figured double plain. Double cloths. Cloths backed with warp; cloths backed with filling. Cloths ornamented with extra warp; cloths ornamented with extra filling. Cotton velvet. Corduroy. Matelasse. Leno weaves with one, two, and more sets of doups. Principles of working both top and bottom doups. Combination of plain and fancy weaves with leno. Methods of obtaining leno patterns. Jacquards. Distribution and setting out of figures for geometrical and floral effects. Distributing figures to prevent lines. Areas of patterns. Preparation of sketches. Transfer of sketches to design paper. Painting in the design with different weaves according to sketch. Shading of patterns. Card cutting and lacing. Fabric structure: textile calculations. Determining the number of threads and picks per inch to make a perfect cloth. Calculations to determine the texture in an unequally reeled fabric. Diameter of threads. Balance of cloth. Texture for double cloth. Cloth analysis. Calculating particulars of cloth from data ascertained from samples. Shrinkages. Dents in patterns: patterns in warp. Drafting and pattern chain building. Reed and harness calculations. Calculations to obtain quantities of warp and filling in stripe and check fabrics. To find number of threads per inch, using a given weight of warp; also number of picks per inch, using a given weight of filling. Yarn calculations. System of numbering woolen: worsted; silk; linen, and cotton yarns. Determination of one system of yarn to that of another. Required of Juniors and Seniors in the Four

Year Course, and of first and second year students in the Short Course. Mr. NELSON.

COURSES IN DYEING.

As the textile industries of the State increase, the need of young men who have been trained in the principles as well as the practice of the different factory operations becomes apparent. In the course in dyeing the student is taught the different practical methods of the dye-house; the chemistry of the dye-stuffs, some of each class of which he actually makes; the chemical changes brought about by mordants, assistants, etc. He also learns color matching, dye testing and the methods for the analysis of the different chemicals used in the dye-house. He carries on the study of carding, spinning, weaving, designing, cloth analysis, etc., to the end of the junior year with the other textile students and with them devotes attention to shopwork, drawing, engines, boilers, etc., together with the general studies of English, history, mathematics, physics and general chemistry, which are required in all the Four Year Courses.

VIII. The Four Year Course in Dyeing, leading to the degree of Bachelor of Science.

Trigonometry, 338 -----	--	4	4
English, 342 and 344 -----	2	2	2
Military Drill, 345 -----	3	3	3

Junior Year.

Dyeing, 306 -----	2	2	2
Dyeing (laboratory), 307 -----	2	2	2
Organic Chemistry, 313 -----	2	2	2
Carding and Spinning, 301 -----	3	3	3
Weaving, 302 -----	3	3	3
Textile Designing, 303 -----	3	3	3
English and History, 347 and 345 -----	2	2	2
Military Tactics, 350 -----	1	1	1
Military Drill, 349 -----	3	3	3

Senior Year.

SUBJECTS.	PERIODS PER WEEK.		
	1st Term.	2d Term.	3d Term.
Chemistry of Dye-stuffs, 308-----	4	4	4
Analytical Chemistry, 314-----	5	5	5
Industrial Chemistry, 315-----	2	2	2
Boilers, 326-----	2	--	--
Steam-engines, 327-----	--	2	--
Valve Gears, 328-----	--	--	2
English, 345 and 343-----	2	2	2
Political Economy, 348-----	2	2	2
Military Drill, 349-----	3	3	3

DYEING.

306. Dyeing.—Lectures—Fraps' *Principles of Dyeing*—the general appearance, structure and properties of the textile fibres are studied, special attention being paid to the cotton fibres, although the other fibres are studied to a sufficient extent to familiarize the student with their use and applications. The chemical and physical tests for the detection of fibres in mixed goods are studied.

The preliminary steps to dyeing, bleaching, scouring, adaptability of water for bleaching and dyeing are taken up and then the application of each class of dyes to the different fibres with a study of the necessary assistants and mordants. Typical dyes of each class are studied with different mordants to illustrate the value of each. Finally the different methods of printing, dyeing mixed goods, and mercerization are studied. Two periods. For Juniors. Mr. HASKELL.

307. Dyeing Laboratory.—The experiments are intended to follow the lecture course, thus making the student familiar by actual trial tests with facts brought out in the lecture. These tests are made with small skeins of yarn. The student learns the different methods of dyeing which are applicable to cotton, those which are applicable to wool, etc. Comparative tests as to fastness of washing, to light, to dilute acids, alkalis, and to rubbing are made, and the samples showing each test are kept in a scrap-book. The different

styles of printing are studied and special methods for dyeing. Two periods. For Juniors. Mr. HASKELL.

308. Chemistry of Dye-stuffs.—Lectures and laboratory work. Nietski's *Chemistry of Organic Dye-stuffs*, and Gattermann's *Practical Methods of Organic Chemistry*. Distillation of coal tar and its products valuable in the preparation of dye-stuffs will be studied. Other compounds that are starting products for the synthesis of dye-stuffs together with operations employed in these preparations—for example—sulphonation, nitration, chlorination, oxidation, reduction, condensation and diazotization will be taken up in the lectures. And finally the preparation of the more important dyes of the following groups: 1 Rosaniline Colors; 2 Azine Colors; 3 Oxyazine Colors; 4 Thiazine Colors; 5 Acridine Colors; 6 Quinoline Colors; 7 Nitro Colors; 8 Azo Colors; 9 Stilbene Colors; 10 Anthracene Colors; 11 Indigo; 12 Sulphide Colors. Four periods. Required of Seniors in Dyeing. Mr. HASKELL.

CHEMISTRY.*

311. Inorganic Chemistry.—Remsen's *College Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and Mr. HASKELL.

312. Inorganic Chemistry.—Laboratory work. Remsen and Randall's *Laboratory Guide*. The student performs, under the eye of the instructor, experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. GARDNER.

313. Organic Chemistry.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and their more important compounds are studied. Special attention is devoted to that part of the subject which bears more directly upon the dye-stuffs. Two periods. For Juniors in Dyeing. Mr. HASKELL.

314. Analytical Chemistry.—Treadwell's *Qualitative Analysis* and instructor's notes. A discussion of the principles involved in chemical analysis, together with laboratory work. The student is taught to detect the presence of the common metallic elements, as well as that of the acids unknown substances. During the latter part of

*For further information, see course in Chemistry.

the year work is taken up in quantitative analysis, special attention being given to the analysis of those chemicals most used in the dye-house. Five periods. Required of Seniors in Dyeing. Dr. SMITH.

315. Industrial Chemistry.—Thorpe's *Outlines of Industrial Chemistry*. A discussion of the processes and principles involved in the more important chemical industries. A discussion of the materials of engineering. Two periods. Required of Seniors in Dyeing. Professor WITHERS.

MECHANICAL ENGINEERING.*

316. Free-hand Drawing.—Work in the use of the pencil; technical sketches of objects, usually parts of a machine. Two periods, first term. Required of Freshmen and first year students. Mr. ST. AMANT.

317. Elementary Mechanical Drawing.—Use of instruments; geometric drawing; isometric and cabinet drawing; elementary projections; drawings made to scale from working sketches of pieces of a machine. Two periods, second and third terms. Required of Freshmen and first year students. Mr. ST. AMANT.

318. Descriptive Geometry Drawing.—Elementary principles; cylinders, cones and prisms; intersection development of surfaces, miscellaneous problems. One period, first term. Required of Sophomores. Mr. WALES.

319. Mechanical Drawing.—Working sketches and drawing machine parts from the models; tracing and blue-printing; elementary machine design. One period, second and third terms. Required of Sophomores. Mr. WALES.

320. Wood-work.—Use of bench tools; working from drawings, lining, sawing, planing; practice in making simple exercises in wood-turning. One period. Required of Freshmen. Mr. BRAGG.

321. Forge-work.—Exercises in working with iron, welding; uses and care of forge-tools and fires. One period. Required of Freshmen. Mr. DEAL.

322. Forge-work.—Exercises in working with steel; tempering; case-hardening. One period, first term. Required of Sophomores and second year students. Mr. DEAL.

323. Pattern-making.—Exercises in making patterns, generally of machine parts. One period, second and third terms. Required of Sophomores and second year students. Mr. BRAGG.

*For full information, see course in Mechanical Engineering.

324. Machine-shop Work.—Bench and machine-work. Exercises in chipping and filing. Exercises in lathe-work, boring, reaming, drilling, planing, milling and shaper work. Two periods. Required of Textile Juniors. Mr. PARK.

325. Mechanical Technology.—Classification and uses of wood-working and forging tools and machines; principles of correct methods of wood-working and forging; care of belting and shafting. One period. Required of Freshmen. Mr. BRAGG.

326. Boilers.—Steam generation; types, care and management; fittings and appliances; corrosion and incrustation; combustion of fuel; boiler power. Two periods, first term. Required of Seniors. Professor DICK.

327. Steam-engines.—Types—simple and compound and triple expansion, automatic, Corliss, rotary. Care and management. Indicators, indicated and brake horse-power, condensers. Two periods, second term. Required of Seniors. Professor DICK.

328. Valve Gears.—Plain slide valve, balanced valves, Corliss and other form valve gears. Link and radial reversing gears. Shaft governors. Bilgram and Zenner valve diagrams. Two periods, third term. Required of Seniors. Professor DICK.

PHYSICS.*

331. Elementary Physics.—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Two periods. Required of Freshmen. Professor PAINE.

332. Elementary Lessons in Electricity and Magnetism.—Two periods. Required of Sophomores. Professor PAINE.

MATHEMATICS.†

336. Advanced Algebra.—Begins at quadratic equations; general theory of equations; solution of higher equations, etc. Wells's *Higher Algebra*. Five periods, first term. Required of Freshmen. Mr. YATES and Mr. MACCALL.

337. Geometry.—Plane and solid. Wentworth's *Plane and Solid Geometry*. Five periods, second and third terms. Required of Freshmen. Four periods, first term. Required of Sophomores. Mr. YATES.

*For full information, see course in Electrical Engineering.

†For full information, see course in Civil Engineering.

338. Trigonometry.—Four hours, second and third terms. Required of Sophomores. Mr. YATES.

ENGLISH.

341. Introductory Composition and Rhetoric.—This course in the fundamentals of Rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill upon grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods a week. Required of Freshmen. Professor HILL, Doctor SUMMEY and Mr. MASON.

342. Rhetoric, Criticisms, Essays.—The student is taught the essentials of good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Two periods, second term. Professor HILL, Doctor SUMMEY and Mr. MASON.

343. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of many exercises. Required of Seniors. Two periods, third term. Professor HILL.

344. American Literature.—By means of an introductory text and by much reading, students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Two periods, third term. Professor HILL, Doctor SUMMEY and Mr. MASON.

345. English Literature.—The development of English Literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two periods, third term. Required of Juniors. Two periods, first and second terms. Required of Seniors. Professor HILL.

347. English History.—The first term of the Junior year is devoted to a study of English history. The text is supplemented by lectures on important periods. Two periods, first and second terms. Required of all Juniors. Professor HILL.

POLITICAL ECONOMY.

348. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation,

and taxation. Instruction is given by lectures and text-books. Two periods. Required of Seniors. President WINSTON.

MILITARY SCIENCE.

349. Drill.—Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours in the afternoon. Required of all classes. Commandant and officers of the Battalion.

350. Tactics.—Theoretical instruction in the Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Manual of Guard Duty; Outposts, etc. One period. Required of Juniors. Captain PHELPS.

NORMAL COURSES.

I. For Rural Teachers :

- (a) **Two Year Course.**
- (b) **One Year Course.**
- (c) **Summer Course.**

II. For City Teachers :

- (a) **Two Year Course.**
- (b) **One Year Course.**
- (c) **Summer Course.**

The Normal Courses are intended for the education of teachers, both men and women, chiefly along industrial lines. Industrial education is being introduced into our public schools, and the College has a constant demand for well-trained industrial teachers. It is hoped by means of the Normal Courses to help supply this demand. Our School Law already requires agriculture to be taught in the public schools, and manual work will doubtless be added.

The Courses for Rural Teachers are devoted largely to agriculture and nature study; the Courses for City Teachers, to drawing and manual training. Each of these courses also includes a review of other public school studies.

Persons already engaged in teaching may, at slight expense of time and money, by means of the short courses or the Summer Courses, make themselves proficient in one or more industrial lines. Persons preparing to teach may take the full courses, and thus become proficient not only along industrial lines, but also in the other public school branches and in one or more sciences, or in higher Mathematics and English. The industrial training given is both practical and theoretical, and is arranged with reference to the present needs of the public schools in North Carolina. The exercises in the Normal Courses are the same as in the other courses of the colleges, except in the Summer Courses.

The Normal Courses are as follows:

I. Courses for Rural Teachers.

(a) TWO YEAR COURSE.

First Year.

SUBJECTS.	PERIODS PER WEEK.		
	1st Term.	2d Term.	3d Term.
Agriculture-----	3	3	3
Nature Study { Plants-----	3	3	3
{ Animals-----	3	3	3
English-----	3	3	3
Mathematics-----	5	5	5
Military Drill-----	3	3	3

Second Year.

Farm Equipment-----	4	--	--
Soils-----	--	4	--
Crops-----	--	--	4
Plant Diseases-----	3	--	--
Physics-----	--	3	--
Botany-----	--	--	3
Mathematics-----	4	4	4
English-----	3	3	3
Drawing-----	2	2	2
History-----	2	2	2
Military Drill-----	3	3	3

(b) ONE YEAR COURSE.

SUBJECTS.	PERIODS PER WEEK.		
	1st Term.	2d Term.	3d Term.
Agriculture-----	3	3	3
Farm Equipment, Soils and Crops-----	4	4	4
Nature Study-----	3	3	3
Mathematics-----	4	4	4
English-----	3	3	3
Military Drill-----	3	3	3

II. Courses for City Teachers.

(d) TWO YEAR COURSE.

First Year.

Drawing-----	2	2	2
Wood-work-----	1	1	1
Forge-work-----	1	1	1
Mechanical Technology-----	1	1	1
Algebra and Geometry-----	5	5	5
English-----	3	3	3
History-----	2	2	2
Drill-----	3	3	3

Elective, 3 periods required: Physics 2, Nature Study (Plants) 3, Nature Study (Animals) 3.

Second Year.

SUBJECTS.	PERIODS PER WEEK.		
	1st Term.	2d Term.	3d Term.
Drawing -----	2	2	2
Wood-work -----	4	4	4
Forge-work -----	1	1	1
English -----	2	2	2
Architecture and Descriptive Geometry -----	2	2	2
Architectural Drawing -----	2	2	2
Geometry and Trigonometry -----	4	4	4
Drill -----	3	3	3

Elective, at least 2 periods required: Chemistry 3, Chemical Laboratory 2, Electricity and Magnetism 2, Descriptive Geometry 2, Plant Diseases, Human Physiology, Physiological Botany 3.

(b) ONE YEAR COURSE.

Drawing -----	3	4	4
Wood-work -----	4	5	5
Forge-work -----	2	2	2
Architecture -----	2	--	--
Architectural Drawing -----	2	2	2
Algebra and Geometry -----	5	5	5
Drill -----	3	3	3

Elective: Physics 2, English (132) 3, English (133 and 135) 2, History 2, Nature Study (Plants) 3, Nature Study (Animals) 3, Chemistry 3, Chemical Laboratory 2, Electricity and Magnetism 2, Plant Diseases 3, Human Physiology 3, Physiological Botany 3, Geometry and Trigonometry 4, Descriptive Geometry 2.

DONATIONS.

The College makes thankful acknowledgment of the receipt of the following gifts during the year:

To the Textile Department.

Whitin Machine Works, Whitinsville, Mass.—One set leno attachments for dobby loom; repairs for carding and spinning machinery.

Saco & Pettee Machine Shops, Newton Upper Falls, Mass.—Repairs for spinning and roving frames.

John Royle & Son, Paterson, N. J.—Part value on piano card cutting machine.

Joseph Battles Manufacturing Co., Lawrence, Mass.—One 600-hook single-lift Jacquard machine.

National Ring Traveler Co., Providence, R. I.—Supply of spinning and twisting travelers.

Cassella Color Company, New York.—Samples dye-stuffs, books and pattern cards.

Farbenfabriken von Elberfeld Company, New York.—Samples dye-stuffs, books and pattern cards.

Courtesies Extended to Textile Department.

Textile Excelsior, Charlotte, N. C.

Textile Manufacturers' Journal, New York.

Fiber and Fabric, Boston, Mass.

Manufacturers' Record, Baltimore, Md.

Textile World, Boston, Mass.

Textile American, Boston, Mass.

The Manufacturer, Philadelphia, Pa.

The Tradesman, Chattanooga, Tenn.

American Industries, New York City.

Cotton, Atlanta, Ga.

Dixie, Atlanta, Ga.

American Cotton and Wool Reporter, Boston, Mass.

Mill News, Charlotte, N. C.

Dyers' Bulletin, Philadelphia, Pa.

The Dyer and Calico Printer, London, Eng.

The Chemical Trade Review and Dyers' Trade Journal, Phila., Pa.

Garment Dyers' Guide, Philadelphia, Pa.

Cassella Color Company, New York City.

Pilot Cotton Mills, Raleigh, N. C.

Caraleigh Cotton Mills, Raleigh, N. C.

Raleigh Cotton Mills, Raleigh, N. C.

To the Library.

Mrs. Lottie Boner, Durham, N. C.—"Poems," by John Henry Boner.

Prof. C. W. Burkett, West Raleigh, N. C.—"Ascent of Man," by Henry Drummond.

Macmillan Co., New York.—"The Fat of the Land," by John William Streeter.

Mr. John A. Park, Raleigh, N. C.—"Man Without a Country," by Edward Everett Hale.

Capt. F. E. Phelps, West Raleigh, N. C.—"Cochrane the Dauntless," "Condemned as a Nihilist," "In the Irish Brigade," and "On the Irrawaddy," by G. A. Henty; "Warwick of the Knobs," by John Uri Lloyd.

Mr. John S. Pierson, New York.—"Tom Keenan, Locomotive Engineer."

Prof. Benjamin Sledd, Wake Forest, N. C.—"From Cliff and Seaur," "Watchers of the Hearth," by Prof. Benjamin Sledd.

Mr. and Mrs. E. H. Taylor, Peterboro, N. H.—"In Memory of Denzel Hollis Taylor."

Mrs. George T. Winston, Raleigh, N. C.—"The Lightning Conductor," by C. N. and A. M. Williamson.

To the Registrar's Office.

Imperial Brush Company, Newark, N. J.—One office brush.

CATALOGUE OF STUDENTS.

GRADUATES.

<i>Name.</i>	<i>Post-office.</i>	<i>Course.</i>
WALTER LEE DARDEN, B. E.,	Goldsboro,	C. E.
OLIVER MAX GARDNER, B. S.,	Shelby,	Chem.
JARVIS BENJAMIN HARDING, B. E.,	Greenville,	C. E.
WILLIAM F. KIRKPATRICK, B. E.,	Charlotte,	Agr.
CARROLL LAMB MANN, B. S.,	Englehard,	C. E.
GASTON WILDER ROGERS, B. E.,	Raleigh,	C. E.

SENIOR CLASS.

LEROY FRANKLIN ABERNETHY,	Hickory,	Agr.
ROBERT JAMES AVERY,	Morganton,	Agr.
OSCAR LUTHER BAGLEY,	Bagley,	Chem.
BENJAMIN ALEXANDER BROOM,	Olive Branch,	M. E.
JOEL WATKINS BULLOCK,	Williamsboro,	Agr.
HENRY BROZIER CARTWRIGHT,	Elizabeth City,	C. E.
WILLIAM MILLER CHAMBERS,	Wentworth,	E. E.
HILLIARD FRANCIS CREITZBERG, Jr.,	Winston-Salem,	Chem.
WALTER GOSS FINCH,	Lexington,	M. E.
STERLING GRAYDON,	Greenwood, S. C.,	M. E.
FRED. WATSON HADLEY,	Siler City,	Chem.

FIFTEENTH ANNUAL COMMENCEMENT.

May 25, 1904.

BACHELORS OF AGRICULTURE.

WILLIAM WALTER FINLEY.
WILLIAM KERR,

JAMES CLARENCE TEMPLE,
ALBERT CLINTON WHARTON, JR.

BACHELORS OF ENGINEERING.

In Civil Engineering.

EUGENE CLEVELAND BAGWELL.
ERNEST ERWIN LINCOLN.

WILLIAM FIELD MORSON.
LEON ANDREWS NEAL,
JOSEPH KENDALL WAITT.

In Electrical Engineering.

HAYWOOD LEWIS ALDERMAN,
WILLIAM ALEXANDER BARRETT.
TIMOTHY ELDRIDGE,
JAMES WILLIAM FARRIOR.

JOSEPH PERRIN GULLEY, JR.,
WILLIAM FRANKLIN KIRKPATRICK,
JOSEPH ALFRED MILLER,
WILLIAM JOEL PATTON.

FREDERICK COLWELL PHELPS.

In Mechanical Engineering.

NELSON ADAMS,
SYDNEY WOODWARD ASBURY.
EDWARD PAR BAILEY,
JAMES CLAUDIUS BARBER.
WILLIAM WALTON BARBER,
PAUL STIREWALT GRIERSON.

GEORGE HERBERT HODGES,
BRANTON FAISON HUGGINS,
JOHN FAIRLY MCINTYRE,
WILLIAM WALTER RANKIN, JR.,
RISDEN PATTERSON REECE,
WILLIAM RICHARDSON, JR.,

MARION EMERSON WEEKS.

In Textile Industry.

GEORGE WASHINGTON FOUSHEE,
JARVIS BENJAMIN HARDING.

JESSE MCRAE HOWARD,
HILL MCIVER HUNTER,

JAMES MCKIMMON.

BACHELOR OF SCIENCE.

In Industrial Chemistry.

EDGAR WILLIAM GAITHER.

MASTER OF AGRICULTURE.

JUNIUS SIDNEY CATES.

HONORS IN SCHOLARSHIP FOR FOUR YEARS.

J. B. HARDING,

R. P. REECE,

E. E. LINCOLN,

J. C. TEMPLE.

HONORS IN SCHOLARSHIP FOR 1903-4.**Senior Class.**

J. W. FARRIOR,

WILLIAM KERR,

J. B. HARDING,

E. E. LINCOLN,

G. H. HODGES,

R. P. REECE,

J. C. TEMPLE.

Junior Class.

O. L. BAGLEY,

L. A. MURR,

L. V. EDWARDS,

C. A. SEIFERT,

C. W. MARTIN,

J. RHODES SMITH.

Sophomore Class.

H. L. HAMILTON,

J. P. LOVILL,

L. L. VAUGHAN.

Freshman Class.

W. B. TRUITT.

Short Course Class.

V. L. KNOTTS,

W. L. MASON,

W. O. McKEOWN.

Irregular Class.

L. F. KOONCE.

HONORS FOR PUNCTUALITY.

P. S. GRIERSON, '04.

E. F. MEADOR, '07.

REPTON HALL MERRITT,	B. S.,	McAdenville, N. C.
		Book-keeper Cotton Mill.
ALBERT HICKS OLIVER,	B. S.,	New Orleans, La.
		Dairyman and Farm Superintendent.
HUGH WILLIAM PRIMROSE.*	B. S.,	Raleigh, N. C.
		M. S. 1900.
WILLIS HUNTER SANDERS,	B. S.,	Roanoke Rapids, N. C.
		Superintendent Roanoke Navigation and Water-power Co.
THOMAS JEHU SMITHWICK,	B. S.,	Port Royal, S. C.
		Electrical Engineer Navy Yard.
JORDAN LEA WATSON,	B. S.,	Atlanta, Ga.
		Mechanical Engineer, Allis Chalmers Co.
BRADLEY JEWETT WOOTEN.*	B. S.,	Wilmington, N. C.
		Lieutenant U. S. Army.

CLASS OF 1898.

DORSEY FROST ASBURY,	B. S.,	Washington, D. C.
		U. S. Gun Works.
SIDNEY HAMILTON BECK,	B. S.,	Washington, D. C.
		Marine Engineer Navy Department.
ANSON ELIKEM COHOON,	B. S.,	Washington, D. C.
		With Forestry Bureau Department of Agriculture.
HUGH McCULLOM CURRAN,	B. S.,	Washington, D. C.
		With Forestry Bureau Department of Agriculture.
BENJAMIN CAREY FENNELL,	B. S.,	Atlanta, Ga.
		M. E. 1900. Engineer and Machinery Contractor.
ALPHEUS ROUNTREE KENNEDY,	B. S.,	Mystic, Conn.
		Draughtsman Eastern Ship Building Co.
FREDERICK CREECY LAMB,	B. S.,	Raleigh, N. C.
		Assistant Chemist N. C. Department of Agriculture.
EDWIN BENTLEY OWEN,	B. S.,	Chicago, Ill.
		Graduate Student Chicago University.

* Deceased.

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
B. MOORE PARKER,	B. S.,	Clemson, S. C.
Assistant in Carding and Spinning, Clemson Agricultural College.		
NUMA REID STANSEL,	B. S.,	Portsmouth, Va.
Chief Electrical Engineer U. S. Navy Yard.		
TEISAKU SUGISHITA,	B. S.,	Kokufu, Hida, Japan.
Civil Engineer.		
GEORGE FREDERICK SYME,	B. S.,	Copen, W. Va.
Resident Civil Engineer Coal and Coke Railway.		

CLASS OF 1899.

WM. DAVIDSON ALEXANDER, JR.,	B. S.,	Charlotte, N. C.
Constructing Engineer, Charlotte Water-works.		
IRA WILSON BARBER,	B. S.,	Mt. Airy, N. C.
Superintendent Electric Light Plant and Water-works.		
JOHN HENDERSON BIRDSONG,	B. S.,	Duquesne, Pa.
Chemist Carnegie Steel Company.		
FRANCIS MARION FOY,	B. S.,	Scott's Hill, N. C.
Truck Farmer.		
ALBERT SIDNEY LYON,	B. S.,	Rocky Mount, N. C.
Superintendent Public Works.		
CARROLL LAMB MANN,	B. S.,	West Raleigh, N. C.
Instructor in Civil Engineering.		
O'KELLY WILLIAM MYERS,	B. S.,	Fortress Monroe, Va.
Engineer of Construction, U. S. Engineering Department.		
EUGENE LEROY PARKER,	B. S.,	Mt. Pleasant, Tenn.
Chemist Tennessee Phosphate Co.		
EUGENE GRAY PERSON,	B. S.,	Macon, Ga.
Book-keeper Bibb Mfg. Co.		
FREDERICK ERASTUS SLOAN,	B. S.,	West Raleigh, N. C.
Registrar N. C. College of Agriculture and Mechanic Arts.		
ANDREW THOMAS SMITH,	B. S.,	Newport News, Va.
Draftsman, Newport News S. S. and D. D. Co.		
ALEXIS PRESTON STEELE,	B. S.,	Statesville, N. C.
Mechanical Engineer J. C. Steele & Son's Brick Machinery Co.		
WILLIAM ANDERSON SYME,	B. S.,	Baltimore, Md.
M. S. 1903. Graduate Student Johns Hopkins University.		
HUGH WARE,	B. S.,	Ensley, Ala.
Assistant Chemist Tennessee Coal, Iron and Railroad Co.		
CLAUD BURGESS WILLIAMS,	B. S.,	New York City.
M. D., Resident Physician Bellevue Hospital.		

CLASS OF 1900.

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
KEMP ALEXANDER,	B. E.,	Kernersville, N. C.
Superintendent Davis-Crews Co. Hosiery Mill.		
LESLIE LYLE ALLEN,	B. E.,	Washington, D. C.
Ordinance Draughtsman U. S. Government.		
ROBERT LINN BEENHARDT,	B. S.,	Salisbury, N. C.
With Salisbury Hardware and Furniture Co.		
LESLIE GRAHAM BERRY,	B. E.,	Des Moines, Iowa.
Structural Engineer with Des Moines Bridge and Iron Works.		
JAMES HARRY BUNN,	B. E.,	Henderson, N. C.
Assistant Secretary Henderson Cotton Mill.		
SAMUEL MERRILL HANFF,	B. S.,	Sewanee, Tenn.
Theological Student University of the South.		
GEORGE ROLAND HARRELL,	B. S.,	Elizabeth, N. J.
Superintendent Anation Chemical Co.		
HENRY ALLEN HUGGINS,	B. S.,	Wilmington, N. C.
Book-keeper, Geo. W. Huggins.		
GARLAND JONES, JR.,	B. S.,	Fort Worth, Tex.
Chemist Armour & Co.		
LOUIS HENRY MANN,	B. E.,	Middleton, N. C.
Dentist.		
ROBERT HALL MORRISON,	B. E.,	Mariposa, N. C.
Assistant Manager Cotton Mill.		
WILLIAM MONTGOMERY PERSON,	B. E.,	Bethlehem, Pa.
JUNIUS EDWARD PORTER,	B. E.,	Portsmouth, Va.
Assistant Engineer, A. C. L. Railway Co.		
ROGER FRANCIS RICHARDSON,	B. E.,	Washington, D. C.
Secretary and Treasurer Southern Shade Fixture Co.		
WILLIAM EDWIN ROSE,	B. E.,	Newport News, Va.
Draughtsman Newport News S. S. and D. D. Co.		
FLOYD DE ROSS,	B. E.,	Charlotte, N. C.
Manager Southern Office, Fostoria Electric Co.		
IRA OBED SCHAUB,	B. S.,	Ames, Iowa.
Assistant Professor of Soils, Iowa State College.		
JOHN WADE SHORE,	B. S.,	Boonville, N. C.
Teacher and Farmer.		
WILLIAM TURNER SMITH,	B. E.,	Duplin, Ga.
Secretary and Treasurer Georgia Hydraulic Stone Co.		

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
SOLOMON ALEXANDER VEST,	B. S.,	Rocksdale, Tenn. Chemist Rocksdale Iron Co.
ROSCOE MARVIN WAGSTAFF,	B. E.,	Newport News, Va. Engineering Draftsman with Newport News Ship Building Co.
GAITHER HALL WHITING,*	B. S.,	Richmond, Va. Assistant Chemist Virginia-Carolina Chemical Co.

CLASS OF 1901.

FLETCHER HESS BARNHARDT,	B. E.,	Phoenixville, Pa. Civil Engineer with Phoenix Bridge Co.
WILLIAM OSBORNE BENNETT,	B. E.,	Wadesboro, N. C. Superintendent Independent Cotton Oil Co.
FRED. WILLIAM BONITZ,	B. E.,	Wilmington, N. C. Contractor and Builder.
ZOLLY MOSBY BOWDEN,	B. E.,	Mulberry, Fla. Electrical Superintendent with James Hull & Co.
BEDFORD JETHRO BROWN,	B. E.,	Chicago, Ill. With the Westinghouse Electric Co.
PAUL COLLINS,	B. S.,	Richmond, Va. Assistant Chemist Virginia-Carolina Chemical Co.
WILLIAM PESCU D CRAIGE,	B. S.,	New Orleans, La. With Peter F. Pescud, Insurance.
WILLAM LOIS CRAVEN,	B. E.,	Roanoke, Va. Virginia Bridge and Iron Co.
FELIX GRAY CRUTCHFIELD,	B. E.,	Philadelphia, Penn. Machinist Baldwin Locomotive Works.
GEORGE MASLIN DAVIS,	B. E.,	Winston-Salem, N. C. Secretary and General Manager Winston Tag Machine Co.
WILLIAM DOLLISON FAUCETTE,	B. E.,	Savannah, Ga. Assistant Civil Engineer S. A. L. Railway.
BENJAMIN OLIVER HOOD,	B. E.,	Brooklyn, N. Y. Railroad Bridge Draftsman, Mace Moulton, Consulting Engineer.
MARTIN KELLOGG,	B. Agr.,	Georgetown, S. C. Mechanic, Atlantic Coast Lumber Co.
JESSE JULIAN LILES,	B. E.,	Schenectady, N. Y. Switch-Board Inspector General Electric Co.

* Deceased.

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
LEWIS OMER LOUGEE,	B. E.,	Scottdale, Penn. Engineer Frick Coke Co.
CHARLES HARDEN MCQUEEN,	B. E.,	Winston, N. C. Civil Engineer with J. L. Ludlow, C. E.
WILLIAM FRANKLIN PATE,	B. S.,	Urbana, Ill. Assistant Chemist Agricultural Experiment Station.
EDWARD OSCAR SMITH,	B. E.,	Newport News, Va. Draughtsman Newport News Ship Building and Dry Dock Co.
WALTER STEPHEN STURGILL,	B. E.,	West Point, N. Y. Cadet U. S. Military Academy.
BEVERLY NATHAN SULLIVAN,	B. S.,	Winston-Salem, N. C. Superintendent Winston-Salem Gas and Lighting Establishment.
CHARLES AUGUSTUS WATSON,	B. S.,	Winston-Salem, N. C. Dyeing Department Fries Manufacturing Co.
BENJAMIN VADEN WRIGHT,	B. E.,	Crocaley, La. Civil Engineering, Southern Pacific Railway.

CLASS OF 1902.

WILLIAM DAVID BOSEMAN,	B. E.,	Rocky Mount, N. C. Farmer.
JUNIUS SIDNEY CATES,	B. S.,	Ithaca, N. Y. M. Agr., 1904. Graduate Student of Agriculture, Cornell University.
ROBERT BAXTER COCHRAN,	B. E.,	Lynn, Mass. General Electric Co.
JAMES LUMSDEN FEREBEE,	B. E.,	Gregory, N. C. Farmer.
ROBERT IRVING HOWARD,	B. E.,	Tarboro, N. C. Book-keeper Roberson, Newton & Co.
JOHN LUTHER MCKIMMON,	B. Agr.,	Laurinburg, N. C. Farmer.
LAURIE MOSELEY,	B. E.,	Greensboro, N. C. Southern Representative Owego Bridge Co.
VASSAR YOUNG MOSS,	B. E.,	Joplin, Mo. Structural Draftsman Bartlett Steel Co.
CHARLES ARTHUR NICHOLS,	B. E.,	Muscogee, Ind. Ter. Merchant.
JAMES LAFAYETTE PARKER,	B. E.,	Indianapolis, Ind. Structural Draftsman Noelke-Richards Iron Works.

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
WILLIAM BENEDICT REINHARDT,	B. E.,	Dawson, Y. T. Inspector Dawson Electric Light and Power Co.
RUSSELL ELSTNER SNOWDEN,	B. E.,	Jacksonville, West Va. Civil Engineer Coal and Coke Railway, Weston, W. Va.
JOSEPH PLATT TURNER,	B. E.,	Spray, N. C. Superintendent of Weaving, Cotton Mill.
CLEVELAND DOUGLAS WELCH,	B. E.,	Waynesville, N. C.

CLASS OF 1903.

WILLIAM MORTON BOGART,	B. E.,	Charlotte, N. C. Draftsman General Fire Extinguisher Co.
LESLIE NORWOOD BONEY,	B. E.,	Wilmington, N. C. Draftsman Charles McMillan, Architect.
JOHN SAMUEL P. CARPENTER,	B. E.,	Cherryville, N. C. Superintendent Cotton Mill.
WALTER CLARK, JR.,	B. E.,	Chapel Hill, N. C. Law Student University N. C.
JOHN ELIOT COIT,	B. Agr.,	Ithaca, N. Y. Graduate Student and Fellow in Horticulture Cornell University.
SUMMEY CROUSE CORNWELL,	B. E.,	Charlotte, N. C. Civil Engineer, Henry E. Knox, Jr.
CHARLES LESTER CREECH,	B. S.,	Winston-Salem, N. C. Salesman Fries Dyeing Machines.
EUGENE ENGLISH CULBRETH,	B. E.,	Raleigh, N. C. E. M. Uzzell & Co., Printers.
WALTER LEE DARDEN,	B. E.,	Portsmouth, Va. With S. A. L. Ry.
JUNIUS FRANKLIN DIGGS,	B. S.,	Diggs, N. C. Farmer.
THEOPHILUS THOMAS ELLIS,	B. E.,	Henderson, N. C. Farmer.
JOHN DANIEL FERGUSON,	B. E.,	Rowland, N. C. Rowland Oil and Fertilizer Co.
HUGH PIERCE FOSTER,	B. E.,	Wilmington, N. C. Assistant Chief Engineer, Weed Distilling and Manufacturing Co.
OLIVER MAX GABDNER,	B. S.,	West Raleigh, N. C. Instructor in Chemistry N. C. College of A. and M. Arts.
LAMAR CARSON GIDNEY,	B. E.,	Shelby, N. C.

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
JOHN HOWARD GLENN,	B. E.,	
EMIL GUNTER,	B. E.,	Pierson, Fla.
EUGENE COLISTUS JOHNSON,	B. E.,	Garland, N. C.
		General Manager, J. D. and G. C. Johnson & Co.
JAMES MATTHEW KENNEDY,	B. E.,	Wilmington, N. C.
		Assistant Foreman of Carpenters, A. C. L. Ry. Co.
BENNETT LAND, JR.,	B. E.,	Truth, N. C.
		Assistant Engineer Cape Fear Power Co.
JOHN THOMAS LAND,	B. E.,	Elizabeth City, N. C.
		Architect and Civil Engineer.
EDMOND SHAW LYTCH,	B. E.,	Wilkesburg, Pa.
		Westinghouse Electric Co.
JESSE JOHN MORRIS,	B. E.,	Norfolk, Va.
		Civil Engineer Raleigh and Pamlico Sound Railroad.
DAVID STARR OWEN,	B. E.,	Fayetteville, N. C.
		Electrician, Weed Distilling and Manufacturing Co.
JOHN HARVEY PARKER,	B. E.,	Raleigh, N. C.
		Assistant to T. B. Parker.
JOEL POWERS,	B. E.,	Goldsboro, N. C.
		Draftsman and Machinist, Dewey Bros.
EDWARD HAYS RICKS,	B. E.,	Philadelphia, Pa.
		With Baldwin Locomotive Works.
GASTON WILDER ROGERS,	B. E.,	Raleigh, N. C.
		Graduate Student N. C. College of A. and M. Arts.
CHARLES BURDETTE ROSS,	B. E.,	Charlotte, N. C.
		Assistant Manager Charlotte House Moving Co.
JOHN HOUSTON SHUFORD,	B. S.,	Winston-Salem, N. C.
		Chief Dyer P. H. Hanes Knitting Co.
EDWARD ROE STAMPS,	B. E.,	South Norfolk, Va.
		With F. S. Royster Guano Co.
GEORGE YATES STRADLEY,	B. E.,	Asheville, N. C.
		Civil Engineer Mountain Retreat Association.
CHARLES EDWARD TROTTER,	B. S.,	Baltimore, Md.
		Graduate Student Johns Hopkins University.
JONATHAN WINBORNE WHITE,	B. S.,	Sulphur Mines, Va.
		Chemist, Sulphur Mines and R. R. Co.
EDWIN SEYMOUR WHITING,*	B. E.,	Hamlet, N. C.
		Employee S. A. L. Railway.

* Deceased.

CLASS OF 1904.

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
NELSON ADAMS,	B. E.,	Laurel Hill, N. C. Salesman, with Z. V. Pate.
HAYWOOD LEWIS ALDERMAN,	B. E.,	Schenectady, N. Y. Testing Department, General Electric Co.
EUGENE CLEVELAND BAGWELL,	B. E.,	Tampa, Fla. Civil Engineer, S. A. L. Railway.
EDWARD PAR BAILEY,	B. E.,	Wilmington, N. C. Iron Manufacturer.
JAMES CLAUDIUS BARBER,	B. E.,	Meadville, Pa. Phoenix Iron Works.
WILLIAM WALTER BARBER,	B. E.,	Barber, N. C. Farmer.
WILLIAM ALEXANDER BARRETT.	B. E.,	Missoula, Montana. Electrician, Missoula Electric Light and Water Co.
TIMOTHY ELDRIDGE.	B. E.,	Missoula, Montana. Electrician, Missoula Electric Light and Water Co.
JAMES WILLIAM FABBIOB,	B. E.,	Schenectady, N. Y. General Electric Company.

BOARD OF TRUSTEES.

(State Board of Agriculture.)

S. L. PATTERSON, *President ex officio*, Raleigh.

T. K. BRUNER, *Secretary ex officio*, Raleigh.

JOHN M. FOREHAND, Rockyhock, First District.

J. B. STOKES, Windsor, Second District.

WM. DUNN, New Bern, Third District.

C. N. ALLEN, Auburn, Fourth District.

R. W. SCOTT, Melville, Fifth District.

A. T. MCCALLUM, Red Springs, Sixth District.

J. P. McRAE, Laurinburg, Seventh District.

R. L. DOUGHTON, Laurel Springs, Eighth District.

W. A. GRAHAM, Machpelah, Ninth District.

A. CANNON, Horse Shoe, Tenth District.

BOARD OF VISITORS.

W. S. PRIMROSE, *President*, Raleigh.

R. L. SMITH, *Secretary*, Albemarle.

D. A. TOMPKINS, Charlotte.

FRANK WOOD, Edenton.

E. M. KOONCE, Jacksonville.

W. H. RAGAN, High Point.

DAVID CLARK, Charlotte.

W. J. PEELE, Raleigh.

J. FRANK RAY, Franklin.

CHARLES W. GOLD, Wilson.

S. L. PATTERSON, Commissioner of Agriculture, *ex officio*.

GEORGE T. WINSTON, President of the College, *ex officio*.

FACULTY.

GEORGE TAYLOE WINSTON, A.M., LL.D., President and Professor of Political Economy.

DANIEL HARVEY HILL, A.M., Lit.D., Professor of English, and Vice-President.

WILLIAM ALPHONSO WITHERS, A.M., Professor of Chemistry.

WALLACE CARL RIDDICK, A.B., C.E., Professor of Civil Engineering and Mathematics.

HENRY MERRYMAN WILSON, A.B., Professor of Textile Industry.

CHARLES WILLIAM BURKETT, M.Sc., Ph.D., Professor of Agriculture.

TAIT BUTLER, V.S., Professor of Veterinary Science and Zoology.

FRANK LINCOLN STEVENS, M.Sc., Ph.D., Professor of Botany and Vegetable Pathology.

ELLERY BURTON PAINE, M.S., E.E., Professor of Electrical Engineering and Physics.

H. HAROLD HUME, B.Agr., M.S., Professor of Horticulture.

CHARLES WALTER THOMAS, M.E., Professor of Mechanical Engineering.

WILSON GILLHAM HEATON, First Lieutenant U. S. A., Professor of Military Science and Tactics.

BENJAMIN WESLEY KILGORE, M.S., Lecturer on Soils and Fertilizers.

ROBERT E. LEE YATES, A.M., Assistant Professor of Mathematics.

CHALMER KIRK McCLELLAND, M.S., Assistant Professor of Agriculture.

JOHN CHESTER KENDALL, B.S., Assistant Professor of Dairy Husbandry.

GUY ALEXANDER ROBERTS, B.S., D.V.S., Assistant Professor of Zoology and Anatomy.

CHARLES BENJAMIN PARK, Superintendent of Shops.

FRANKLIN SHERMAN, B.S.A., Instructor in Entomology.
THOMAS NELSON, Instructor in Weaving and Designing.
CARROLL LAMB MANN, B.S., Instructor in Mathematics.
PINCKNEY GUSTAVE DEAL, Instructor in Forge Shop and Pattern-making.
THOMAS SIMEON LANG, B.S., C.E., Instructor in Civil Engineering.
GEORGE SUMMEY, JR., Ph.D., Instructor in English.
WINFRED MORSE ADAMS, B.S., Instructor in Electrical Engineering.
CHARLES WALKER, Ph.D., Instructor in Chemistry.
ALFRED De St. AMANT, B.S., Instructor in Drawing.
RANDOLPH FITZHUGH MASON, B.A., Instructor in English.
FRANK REIMER, M.S., Instructor in Horticulture.
JOHN HOUSTON SHUFORD, B.S., Instructor in Dyeing.
CLARENCE ANDREW SPRAGUE, B.S., Instructor in Physics.
ALFRED HENRY THIESSEN, B.S., Instructor in Meteorology.
RUSSELL SAGE WOGLUM, A.B., M.S.A., Instructor in Entomology.
WILEY THEODORE CLAY, Instructor in Wood-working.
CHARLES HERBERT LAWRANCE, B.S., Instructor in Drawing.
OSCAR LUTHER BAGLEY, B.S., Instructor in Chemistry.
RICHARD HUGH HARPER, B.S., Instructor in Chemistry.
JOHN ELSEY PARK, B.E., Instructor in Mathematics.
HERBERT NATHANIEL STEED, Assistant in Textile Industry.
JAMES CLARENCE TEMPLE, B.Agr., Assistant in Bacteriology.
ARTHUR JOHN WILSON, Assistant in Chemistry.

OTHER OFFICERS.

EDWIN BENTLEY OWEN, B.S., Registrar and Proctor.
ARTHUR FINN BOWEN, Bursar.
BENJAMIN SMITH SKINNER, Steward.
Miss CAROLINE BALDWIN SHERMAN, Librarian.
Mrs. DAISY LEWIS, Matron.
JAMES RUFUS ROGERS, A.B., M.D., Physician.

AGRICULTURAL EXPERIMENT STATION DEPARTMENT.

GEORGE TAYLOE WINSTON, A.M., LL.D., President.
BENJAMIN WESLEY KILGORE, M.S., Director.
WILLIAM ALPHONSO WITHERS, A.M., Chemist.
CHARLES WILLIAM BURKETT, M.Sc., Ph.D., Agriculturist.
TAIT BUTLER, V.S., Veterinarian.
FRANK LINCOLN STEVENS, M.S., Ph.D., Biologist.
H. HAROLD HUME, M.S., Horticulturist.
RUSSELL SAGE WOGLUM, Acting Entomologist.
JOHN STRAUCHON JEFFREY, Poultryman.
OSCAR LUTHER BAGLEY, B.S., Assistant Chemist.
RICHARD HUGH HARPER, B.S., Assistant Chemist.
JOHN CHESTER KENDALL, B.S., Assistant, Dairy Husbandry.
WILLIAM KERR, B.Agr., Assistant, Field Experiments.
ARTHUR FINN BOWEN, Bursar.

MILITARY ORGANIZATION.**Commandant of Cadets.**

FIRST LIEUTENANT WILSON G. HEATON, U. S. Army.

Cadet Major.

W. G. KNOX.

Battalion Staff.

M. H. CHESBRO, Second Lieutenant and Quartermaster.

G. P. ASBURY, Captain and Adjutant.

Non-commissioned Staff.

W. B. TRUITT, Sergeant Major.

A. C. JONES, Quartermaster Sergeant.

C. B. WHITEHURST, Color Sergeant.

Officers Unassigned.

W. C. PIVER, Captain.

T. J. OGBURN, First Lieutenant.

Band.

F. M. PARKS, Drum Major.

W. N. HOLT, Sergeant.

H. S. BATTIE, Sergeant.

L. E. LOUGEE, Sergeant.

C. J. BRYAN, Corporal.

Company A.

D. A. COX, Captain.

T. M. LYKES, First Lieutenant.

L. L. VAUGHAN, Second Lieutenant.

R. MAXWELL, Second Lieutenant.

P. W. HARDIE, First Sergeant.

L. R. GILBERT, Sergeant.

W. L. BLACK, Corporal.

J. K. PLUMMER, Corporal.

C. C. DAWSON, Corporal.

E. V. FOWLER, Corporal.

W. W. JONES, Corporal.

Company B.

D. W. ROBERTSON, Captain.

J. G. MORRISON, First Lieutenant.

A. W. GREGORY, Second Lieutenant.

K. L. BLACK, Second Lieutenant.

G. R. HARDESTY, First Sergeant.

L. J. SCHWAB, Sergeant.

H. S. MONTAGUE, Sergeant.

C. L. GARNER, Sergeant.

J. J. WELLS, Sergeant.

D. LINDSAY, Corporal.

D. Y. HAGAN, Corporal.

G. H. CALDWELL, Corporal.

E. E. SMITH, Corporal.

H. I. STANBACK, Corporal.

Company C.

R. H. TILLMAN, Captain.

A. B. PIVER, First Lieutenant.

L. MOORE, Second Lieutenant.

A. E. ESCOTT, Second Lieutenant.

R. H. CARTER, First Sergeant.

E. F. MEADOR, Sergeant.

R. GILL, Sergeant.

R. S. GRAVES, Sergeant.

L. H. COUCH, Corporal.

R. E. WHITE, Corporal.

L. M. WEAVER, Corporal.

Company D.

L. T. WINSTON, Captain.

J. F. HANSELMAN, First Lieutenant.

J. W. CLARK, Second Lieutenant.

N. E. BELL, Second Lieutenant.

G. F. HINSHAW, First Sergeant.

J. L. FERGUSON, Sergeant.

B. B. EVERETT, Sergeant.

J. O. SHUFORD, Sergeant.
J. E. OVERTON, Sergeant.
W. G. PITMAN, Sergeant.
E. W. GREGORY, Corporal.
W. G. FERGUSON, Corporal.
T. M. POYNER, Corporal.
L. J. HERRING, Corporal.

Company E.

W. S. TOMLINSON, Captain.
J. P. LOVILL, First Lieutenant.
B. B. EGERTON, Second Lieutenant.
J. H. WILLIAMS, Second Lieutenant.
J. L. HEMPHILL, First Sergeant.
L. F. CARLETON, Sergeant.
W. C. STAPLES, Sergeant.
O. F. McNAIRY, Sergeant.
J. M. MILLS, Sergeant.
C. E. STEWART, Corporal.
A. G. BOYNTON, Corporal.
A. D. DUPREE, Corporal.

GENERAL INFORMATION.

The North Carolina College of Agriculture and Mechanic Arts owes its existence to the combined liberality of the United States Government and of R. S. Pullen, of Raleigh, together with the patriotic efforts of a few far-sighted men who saw that in the industrial life of North Carolina the time had come when trained and educated leaders were necessary. The first act of the General Assembly of this State in relation to the College was ratified in 1885, the bill which afterwards became a law, having been introduced by A. Leazar, Esq. The Congress of the United States in 1862 passed a bill, introduced by Senator Justin S. Morrill, of Vermont, giving to each State public lands "for the endowment, support and maintenance of at least one college, whose leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life."

The income from this grant, amounting to \$7,500 annually, was appropriated in 1887 by the Legislature of the State for the establishment and yearly maintenance of this College. Sufficient land for the College site and farm was given by the late R. S. Pullen. The College was formally opened for students October 1, 1889.

Additional funds were provided afterwards by the National Congress to aid in the support of the College and of the State Agricultural Experiment Station, which is now a department of the College.

The College is beautifully located on the extension of Hillsboro street in the western suburbs of Raleigh, a mile and a quarter from the State Capitol. The site is suitable in all respects.

There is an abundant supply of water from twelve deep wells. The water is analyzed, both chemically and bacteriologically, at regular periods.

The College now owns six hundred and twenty-five acres of land and sixteen buildings, and its teaching force consists of forty specialists. Its laboratories, drawing-rooms and work-shops are well equipped. Its library contains four thousand six hundred volumes, and its reading-room is well supplied with literary and technical journals and newspapers.

BUILDINGS.

The Main Building is of brick, with brownstone trimmings, and is one hundred and seventy by sixty-four feet; part four stories in height and the remainder two. The lower floors contain the offices of the President and the Bursar, several recitation-rooms, and the chemical and physical laboratories. The upper stories are occupied by students.

In this, as in other buildings, every precaution has been taken to secure good sanitation. The rooms are well lighted, well ventilated and conveniently arranged.

The Mechanical Engineering Building is a plain, substantial two-story brick building, with large annex. It contains the drawing-rooms, recitation-rooms and shops of the department.

Primrose Hall is a two-story brick building, which has attached a fine range of glass structures. The upper floors contain a large lecture-room and horticultural laboratory. The plant-houses are three in number and are immediately accessible from the lecture-rooms and laboratories.

The Textile Building is a two-story brick building one hundred and twenty-five by seventy-five feet, with a basement. Its construction is similar to a cotton mill, being an illustration of standard construction in this class of buildings. The basement contains the dyeing department, the first floor the looms and warp preparation machinery, and the second floor the carding and spinning machinery.

Pullen Hall.—In honor of the late R. Stanhope Pullen, the greatest benefactor of the College, the large new building recently finished has been called Pullen Hall. The basement of this building is used as a dining-room and seats five hundred students. The first story is used for library, reading-room and lecture-rooms. The second story serves as the College auditorium. This room is commodious, comfortable and well lighted.

The Agricultural Hall is a three-story buff press-brick building with granite trimmings and is 208 by 74 feet. The lower or basement floor contains the class-rooms and laboratories for work in the Department of Animal Husbandry and Dairying. Ample provision is made for butter-making, stock judging, farm butchering and cold-storage accommodations for the products.

The second floor contains the offices of the department, class-rooms for animal husbandry and agronomy, and laboratories for soil physics and agricultural machinery.

On the top floor are the rooms devoted to botany and vegetable pathology, zoology, physiology and veterinary medicine. There are well-equipped class-rooms and large, well-lighted laboratories.

The building affords the best accommodations for education in agriculture and allied subjects, and is especially adapted to its needs.

Watauga Hall is a three-story brick building, trimmed with brown-stone and containing sixty rooms for dormitories. There is also a large dormitory in the attic, and in the basement are bath-rooms, which are free for students' use.

Dormitories.—In addition to Watauga Hall, one three-story and three two-story brick buildings are used exclusively for dormitories.

The Infirmary is a two-story brick building, containing a sitting-room, seven bed-rooms, three bath-rooms, a kitchen, linen-room, College Physician's office and medicine closet. The rooms are large, well ventilated, well lighted, and heated with open fire-places. Each room opens upon a large, pleasant portico. The furnishing and equipment of the rooms are such as are used in modern hospitals.

The Boiler House is a single-story brick building, containing boilers, fire-pump and the machinery connected with the steam-heating plant.

The Barn is a frame building of modern design and carefully planned for the purposes to which it is devoted. The barn is fifty by seventy-two feet and three stories high.

Fire Protection.—The College is supplied with a steam-pump, reservoir, hydrants and fire-hose to protect the buildings from burning.

Heat and Light.—All the College buildings are lighted by electricity from a plant managed by the students, under the direction of the Professor of Electrical Engineering.

The third and fourth dormitories, Primrose Hall and the green-houses attached are heated by hot water; the Textile Building is heated by the Sturtevant hot-air system, and the other College buildings are heated by the Warren-Webster vacuum system of building-heating.

THE AGRICULTURAL EXPERIMENT STATION.

The North Carolina Agricultural Experiment Station is a department of the College. It was established originally as a division of the State Department of Agriculture, in accordance with an act of the General Assembly ratified March 12, 1877. Its work was greatly promoted by act of Congress of March 2, 1887, which made a liberal donation to each State for the purpose of investigations in agriculture

and for publishing the same. The bill, which subsequently became a law, was introduced by Representative William H. Hatch of Missouri.

The Director's office is in the Agricultural Building in Raleigh and the laboratories are in the main building at the College. The experimental work in agriculture, horticulture, stock and poultry raising, and dairying is conducted on the College farm, and the investigations in plant diseases and chemistry in the College laboratories.

The Station is always glad to welcome visitors and to show them the work in progress. The Station conducts a large correspondence with farmers and others concerning agricultural matters. It takes pleasure in receiving and answering questions.

Publications relating to general farming matters and embodying the results of experiments are published and sent free to all citizens of the State who request them. A request addressed to the Agricultural Experiment Station, Raleigh, N. C., will bring these publications and answers to letters.

THE PURPOSE OF THE COLLEGE.

The College is an institution where young men of character, energy and ambition may fit themselves for useful and honorable work in any line of industry in which training and skill are requisite to success. It is intended to train farmers, mechanics, engineers, architects, draughtsmen, machinists, electricians, miners, metallurgists, chemists, dyers, mill-workers, manufacturers, stock-raisers, fruit-growers, truckers, and dairymen, by giving them not only a liberal but also a special education with such manual and technical training as will qualify them for their future work.

It offers practical and technical education in Agriculture, Horticulture, Animal Industry, Civil Engineering, Mechanical Engineering, Electrical Engineering, Mining Engineering, Metallurgy, Chemistry, Dyeing, Textile Industry, and Architecture. It also offers practical training in Carpentry, Wood-turning, Blacksmithing, Machinists' Work, Mill-work, Boiler-tending, Engine-tending, Dynamo-tending and Installation, Electric-light Wiring, Armature Winding and other subjects relating to practical electricity.

Although the leading purpose of the College is to furnish technical and practical instruction, yet other subjects essential to a liberal education are not omitted. Thorough instruction is given in English, Mathematics, History, Political Economy, Physics, Chemistry, Botany, Zoology, Physiology, and Geology.

The College is not a place for young men who desire merely a general education without manual or technical training, nor for lads

lacking in physical development, mental capacity or moral fiber, nor for those that are unable or unwilling to observe regularity, system and order in their daily work.

PRIZES.

A first prize of ten dollars and a second prize of five dollars are awarded annually to the student in the Freshman Class who earns the largest and the next largest amount of money by labor on the College farm.

The Zenner Disinfectant Company, Detroit, Mich., offers a silver medal to the student making the best report on the Live Stock Exhibit at the State Fair. The value of this medal is \$25.

The North Carolina State Fair Association offers a prize of \$5 to the student preparing the best essay on the Live Stock Exhibit at the State Fair.

DISCIPLINE.

The College is under military discipline and the students are regularly organized into a battalion. A printed copy of rules and regulations is furnished each student on admission, and he is expected to conform to the same during his connection with the institution. The discipline is intended to secure studious and economical habits, with punctuality, system and order in the performance of all duties. A durable uniform, which is required to be worn on all occasions, prevents extravagance and folly in dress; rooms plainly furnished and a mess-hall economically managed by the College prevents extravagance in living; regular study hours, day and night, with proper restrictions as to visiting Raleigh, check, or at least minimize, tendencies to idleness, vice, and rowdiness.

Every effort is made to develop strong, intelligent, high-toned men; and proper patience, forbearance and sympathy are used in this great work; but the College is in no sense a reform school, and its work must not be hindered by the presence of young men who are grossly vicious, idle or incompetent.

REPORTS AND SCHOLARSHIP.

Regular reports of scholarship and conduct are sent to parents and guardians at the end of each term. Special reports are made whenever necessary. Students who are persistently neglectful of duty, or manifestly unable to do the work required, will be discharged at any time. The Faculty will require any student to withdraw whenever it

is plain that his stay in the institution is not profitable to himself or to the College.

The scale of grading used is as follows:

90 per cent., or more.....	grade 1
80 per cent., or more.....	grade 2
70 per cent., or more.....	grade 3
60 per cent., or more.....	grade 4
50 per cent., or more.....	grade 5
40 per cent., or more.....	grade 6

The passing grade is 4. Conditions are assigned for grades 5 and 6. These must be removed at the regular condition examinations, or special examinations will be granted by the Faculty upon receipt of \$1 for each.

RELIGIOUS INFLUENCES.

All students are required to attend chapel exercises in Pullen Auditorium each morning. These services are conducted by the President, by some member of the Faculty, or by some visiting minister.

Each student is required to attend religious service in Raleigh on Sunday morning at the church of his choice.

The Young Men's Christian Association, containing in its membership representatives of all the Christian denominations, meets regularly each Sunday afternoon at 2:30 o'clock for conference, Bible study and worship, and exerts a wholesome influence throughout the College.

The members of this Association will meet and welcome new students at the railroad station.

ATHLETICS.

The College is provided with extensive grounds, which furnish ample facilities for military drill and athletic sports.

Out-door sports are directly managed by the Athletic Association and are under the control of a committee of the Faculty.

The Faculty rules governing athletics are as follows:

1. Before any student can become a member or a substitute member of any athletic team in this College and take part in any inter-collegiate contest, he must make application to the Committee on Athletics in the College and secure the endorsed approval of that committee to his application. It shall be the duty of the Athletic Committee to have the executive officers of the College endorse such application to the effect that the applicant is a regular student of the

College, registered within thirty days after the beginning of the fall session.

2. It shall be the duty of the Athletic Committee to inquire into and make a record of the athletic experiences of the applicant, and it shall be the duty of the applicant to appear before the committee and answer on his honor such questions as the committee may see fit to ask.

3. It shall be the duty of the Athletic Committee to require a pledge, in writing, of the applicant, certifying on his honor that he has never accepted, directly or indirectly, remuneration, compensatory gift, valuable consideration or promise thereof, for his athletic services, and that he is, in the proper and strict sense of the word, an amateur player in collegiate athletic sports, before the committee endorses his application.

4. No student of the College who has been a member or a substitute member of a base-ball or a foot-ball team at another college or university shall be permitted to become a member of either base-ball or foot-ball team at this College, unless and until he shall have been a student in residence at this College for at least five months.

5. No person whose name is in the faculty list or appears in the catalogue list of officers of instruction and administration of the College, and who receives a remuneration therefrom, shall be a member of any athletic team representing the College.

6. Whereas, a member of an athletic team of this College is a representative student and enjoys special honor in thus representing the College, this privilege shall be withheld from any student whose scholastic standing is discreditable.

7. Any student who has participated as a player on a college team, in either base-ball or foot-ball, or both, for a period of four years, shall thereafter be ineligible for such athletic contests of the College.

The Athletic Association is organized by the student body to promote physical health and manly spirit through athletic sports. Under the direction of the Athletic Committee of the Faculty it promotes practice in base-ball, foot-ball, track athletics, etc.

LIBRARY AND READING-ROOMS.

The College Library occupies the first story of Pullen Hall. The reading-room is supplied regularly with about one hundred and fifty magazines and journals of various kinds, and yearly additions are being made to this number. The library contains about four thousand volumes. There are also reference libraries in the different departments. The library is kept open from 9 A. M. to 6 P. M. The Libra-

rian is always present to assist students in finding desired information.

The Olivia Raney Library in Raleigh, containing now about seven thousand volumes, is free to the students and they have the privilege of borrowing books from it. Students also have the privilege of consulting books in the State Library.

STATE MUSEUM.

Students have free access to the large collections of the State Museum. These collections furnish most excellent opportunities for studies in Geology, Mineralogy, Mining, Forestry, and Natural History.

COLLEGE SOCIETIES.

Such college organizations are encouraged as tend to form good character, to develop manly physical vigor, and to promote literary, scientific, and technical research and training.

Farmers' Institute.—The students in the Winter Course in Dairying and Agriculture meet every Wednesday night during the winter term for a discussion of practical agricultural problems. The meetings are conducted in the manner of a Farmers' Institute and give training in conducting farmers' meetings, *ex tempore* speaking on agricultural questions, and the writing and reading of reports on various farm operations.

The Rural Science Club meets semi-monthly for the discussion of agricultural subjects, review of current agricultural publications, and reports on personal experiments and the work of the College farm and Experiment Station.

The Biological Club meets semi-monthly for the discussion of biological subjects in their relation to practical agriculture. Students here present results of their own investigations and observations and reviews of the more important current publications, particularly those from the United States Department of Agriculture and the State Experiment Stations.

The Biag Society is composed of those students who have made the best record in biological and agricultural subjects. The Society meets monthly for the discussion of biological and agricultural questions.

The Berzelius Chemical Society meets fortnightly for the discussion of chemical subjects and for review of the current chemical literature with which the College is well supplied.

Electrical Engineering Society.—The members of the Society meet once a week in the physical laboratory. To review the articles on

electrical engineering in the current journals is one of the chief objects of the Society. The Society has at its disposal the best periodicals, most of which are furnished free of charge by the publishers.

The Pullen, Leazar, and Tenerian Literary Societies afford excellent opportunities for practice in declamation, debate, composition, and parliamentary law, as well as opportunities for social pleasure and recreation.

The Glee Club is composed of about twenty young men, embracing the best musical talent of the College. It aims to give one concert each year, and afterwards to sing at various College entertainments and functions during the year.

The Alumni Association meets on Monday of each year preceding Commencement day, transacts its annual business, hears the Alumni oration and attends the annual Alumni banquet. This Association purposes raising funds to erect an Alumni building at the College.

REQUISITES FOR ADMISSION.

Each applicant for admission must be at least sixteen years of age and must bring a certificate of good moral character from the school last attended.

To the Four-year Courses.—Applicants for admission to the Freshman Class of all four-year courses will be examined on the following subjects: Arithmetic (complete), Algebra (through simple equations), English Grammar, Analysis and Composition, and American History. No student will be admitted to the Freshman Class whose examination papers are seriously faulty in spelling, grammar, punctuation, or division into paragraphs.

To the Two-year Courses.—Applicants for admission to the two-year courses will be examined on Arithmetic (through decimal fractions), English Grammar and Composition, and American History.

Applicants for admission to the two-year courses in Agriculture and Textile Industry, if they are twenty years of age, or over, will not be required to take the entrance examinations.

To the Winter Courses.—No entrance examination is required of candidates for admission to the winter courses. No one under eighteen years of age will be admitted to a winter course.

ENTRANCE EXAMINATIONS.

Entrance examinations will be held by the County Superintendents of Instruction in each court-house in the State at 10 o'clock A. M. the second Thursday in July of each year. The date for 1906 is July 12th. These examinations will save the expense of a trip to Raleigh

in case the candidate should fail or if there should not be room enough for him in the College. Entrance examinations will be held also at the College at 9 o'clock A. M. on Wednesday preceding the opening day. The examinations begin with English at 9 A. M., in Room 21, Main Building, followed by Mathematics at 11, and History at 2 in the same room. The date for 1906 is September 5th.

ADMISSION WITHOUT EXAMINATION.

The following persons will be admitted without examination:

1. Applicants for admission to winter courses, over eighteen years of age.
2. Applicants for admission to the two-year course in Agriculture, if they are over twenty years of age.
3. School-teachers holding teachers' certificates.
4. Graduates of those high schools and academies whose certificates are accepted by the Faculty of this College.

CONDITION EXAMINATIONS.

Examinations will be held during September and February for the removal of conditions. Students will be admitted to these examinations without charge.

During 1906-1907 these examinations will be held on the following days, beginning at 9 o'clock A. M.:

Wednesday, September 5th, and Saturday, February 2d—Agriculture, Horticulture, Civil Engineering, Architecture, Mechanical Engineering, Electrical Engineering, Mining, Metallurgy, and Textile Industry.

Thursday, September 6th, and Saturday, February 9th—Chemistry, Dyeing, Physics, Geology, Mineralogy, Botany and Vegetable Pathology, Zoology, Entomology, Veterinary Science, History, Political Economy, Military Science.

Friday, September 7th, and Saturday, February 6th—English.

Saturday, September 8th, and Saturday, February 3d—Mathematics.

Special examinations for the removal of conditions may be held at other times only upon petition to the Faculty, said petition to be accompanied by a receipt from the Bursar for one dollar for each special examination, and to be signed by the head of the department in which the examination is to be held. All moneys collected as fees for special examinations will be turned over to the loan fund for needy students.

Conditions not removed within a year can be removed only by taking the subject again in class, except that a student who enters college with conditions in practice work may be allowed to carry half of his conditions in practice work to the second year if he remove half of these conditions during his first year.

In order to be graduated, a student must be clear of all conditions before beginning the March examinations of the Senior Year.

A student who fails in three studies for any term will be dropped to a lower class or from the College rolls.

The Registrar will include in the report of each student for each term a list of conditions against the student and a notice of the time at which condition examinations will be held.

SESSION.

The College session lasts nine months, and opens annually the first Thursday in September and closes the last Wednesday in May, with a vacation of about two weeks at Christmas.

EXPENSES.

The total expense of a student for the first year is as follows:

Tuition	\$30.00
Room rent	10.00
Fuel and lights.....	12.50
Furniture	2.00
Library	1.00
Incidental	1.00
Medical attention and medicine.....	6.00
Physical culture	2.00
Lectures	1.00
Registration	2.00
Board	90.00
Shop (material and use of tools).....	1.00
Drawing (material furnished).....	1.00
Uniform and cap	14.30
Drawing instruments (complete outfit).....	8.85
Books (estimated cost)	5.00
Laundry (estimated cost).....	10.00

Total expense for year.....\$197.65

The total expense, as shown in the above table, for the year amounts to \$197.65.

Students having scholarships do not pay tuition. Their total expense is \$30 less, or \$167.65.

Freshmen and first-year students in Agriculture are not required to take drawing or shop work. Their total expense for the year is \$186.80 without scholarship, or \$156.80 with scholarship.

These amounts include all charges for board, tuition, lodging, fuel and lights, fees and deposits, books, uniform and cap, drawing instruments, and laundry. They do not include allowance for spending money, nor for contingencies.

The largest payments are made in September and in January. A student on entering college will need about sixty dollars to meet his various dues for the first month. The following table shows the distribution of the total expense for the session by months:

Expense.

DISTRIBUTION BY MONTHS.

Payments required on first day of	<i>Without Scholarship.</i>	<i>With Scholarship.</i>
September	\$ 58.37	\$ 43.37
October	20.41	20.41
November	11.11	11.11
December	11.11	11.11
January	52.21	37.21
February	11.11	11.11
March	11.11	11.11
April	11.11	11.11
May	11.11	11.11
Total	\$197.65	\$167.65

Tuition, fuel and lights, and room rent, together with the registration, furniture, physical culture, and medical fees, are collected one-half (\$32.25) in September, or whenever the student enters, and one-half (\$32.25) in January. Students registering on the day appointed for registration are excused from paying the registration fee. Library, incidental, and lecture fees (\$4) are collected in September, or whenever the student enters. Board is payable in installments of \$10 per month on the first day of each month from September to May, inclusive. Board for less time than one month is charged for at the rate of fifty cents a day, or \$3 per week. Choice is given between paying by the month, by the week, or by the day. The College Bursar is forbidden by the Trustees to give credit, and there is no deviation from this rule.

Students withdrawing from College within two weeks from date of entrance will have refunded all moneys paid by them except charges for board during the time here. Students withdrawing later than two weeks from entrance will have no moneys refunded except board for balance of month.

Drawing instruments are not required in the Freshman Class nor in the First-year Mechanic Arts course until the beginning of the second term. These instruments are furnished by the College at cost to all students requiring them. New students are advised not to purchase instruments before consulting the drawing instructors.

The College rooms are supplied with necessary furniture. Each student should bring with him two pairs of blankets, two pairs of sheets, two pillow-cases, one pillow and two bed-spreads for single bed.

In addition to the fees enumerated above, students are required to pay fees as follows: A fee of \$1 from students taking work in biological (except bacteriological), physical, or electrical laboratory, for material furnished. The deposits for the Chemistry Department are as follows: Inorganic laboratory, \$3; analytical laboratory, \$5; organic laboratory, \$4; determinative mineralogy and assaying, \$3. A deposit of \$3 from Juniors and \$4 from Seniors taking dyeing or bacteriology, to cover cost of breakages. A deposit of \$5 from textile students, to cover cost of designing, supplies, tools, etc. Any unused portion of deposits to chemical, bacteriological or dyeing laboratories or to the Textile Department will be returned at the end of the year. If the deposit made is not sufficient to cover breakages and cost of material furnished, the students are required to make good the deficiency.

UNIFORM.

The College uniform must be worn by all students except winter-course students. It must be purchased at the College from the contractor. The uniform is of a strong gray cloth, and with care it will last a year. New students are especially cautioned not to bring with them to the College a supply of citizens' clothing, as the uniform must be worn on all occasions. Each student is required to wear an overcoat during cold weather. Overcoats may be brought from home or purchased in the city. In order to secure uniformity, dark colors (black or dark gray) are required.

FREE TUITION.

Scholarships, one hundred and twenty in number, conferring free tuition, are given to needy boys of talent and character. As far as

possible, these scholarships are distributed among the counties of the State. Appointments are made only by the President of the College upon written recommendation of members of the Legislature. The scholarships are not intended for people who have property. Certificates of inability to pay must be made by the applicant and endorsed by the person recommending him.

SELF-HELP.

Many students pay their own expenses, either wholly or partly, by doing various kinds of work. There is regular employment for a limited number, enabling them to earn from \$4 to \$10 a month. There is also occasional employment, paying from \$2.50 to \$5 a month. The work offered is mainly on the farm, in the barn, milking and feeding cattle, etc., and is for agricultural students only. There is very little work available for others, except serving in the dining-room. Young men should not rely upon material help from work the first year, as most of the work is given to students who have had a year's experience at the College. Application for work should be made before the student comes to college.

STUDENT LOAN FUND.

The Alumni Association of the College has established a small fund to be lent to needy students of talent and character. The loans are made at six per cent., and good security is required. Sufficient time is given for repayment to enable the student to earn the money himself. The amount lent to each student is limited. The purpose is to help young men who are willing to help themselves and who cannot find sufficient employment while in college to meet all their necessary expenses.

Contributions are solicited for this fund from students, *Alumni* and friends of education generally. The fund is administered by the College Bursar, under the direction of the President. At present the fund amounts to \$1,187.29.

BOARD AND LODGING.

All students are expected to board in the College mess-hall and to room in the College dormitories. An abundant supply of plain, nourishing food, with as large a variety as possible, is furnished absolutely at cost. The charge at present is \$10 per month, payable in advance.

Rooms in the College dormitories are supplied with electric lights.

steam heat, and all necessary furniture, except sheets, blankets, pillow-cases, pillows, bed-spreads, and towels, which each student must furnish for himself. The charge for lodging is by the month, and there is no reduction in case of withdrawal.

CARE OF THE SICK.

Every effort is made to protect the health of young men in the College. Regular inspections of the entire institution are made once a year, or oftener, by the State Board of Health. Similar inspections, at frequent intervals, are made by the College physician. There is an abundant supply of pure water from twelve deep wells. Each student has a regular routine of daily life, including abundant physical exercise in the shops and on the drill grounds.

In case of sickness a student is taken immediately to the College Infirmary, where he receives medical attention and careful nursing.

The College physician visits the Infirmary daily at 10 o'clock, and in cases of serious illness as frequently as may be required.

A trained nurse has charge of the Infirmary at all times.

COURSES OF INSTRUCTION.

The College offers the following Courses of Instruction:

I. Four-year Courses:

- 1st. **Agriculture** (including Agriculture, Horticulture, Veterinary Science, Biology, and Agricultural Chemistry).
- 2d. **Engineering** (including Civil Engineering, Mechanical Engineering, Electrical Engineering, Mining Engineering, Industrial Chemistry, and Dyeing).
- 3d. **Textile Industry or Cotton Manufacturing** (including Carding, Spinning, Weaving, Designing, and Dyeing).

These courses offer a combination of practical and theoretical work, about half of the time being devoted to lectures and recitations and the other half to work in the shops, laboratories, drawing-rooms, greenhouses, dairies, fields and mills. They are intended to furnish both technical and liberal education. The degree of Bachelor of Agriculture is conferred upon a graduate in the Four-year Course in Agriculture. The degree of Bachelor of Science is conferred upon a graduate of the Four-year Course in Chemistry or Dyeing, and the degree of Bachelor of Engineering upon a graduate of either of the other Four-year Courses.

II. Short Courses of two years (not leading to a degree) in Agriculture, in Textile Industry, in the Mechanic Arts (including Carpentry, Wood-turning, Blacksmithing, Machine-shop Work, Drawing, and Dynamo and Engine Tending, and in Applied Electricity.

The Short Courses include nearly all the practical work of the Four-year Courses, with less theoretical instruction. They are intended for students who desire chiefly manual training or for those who are unable to complete the Four-year Courses.

III. Winter Courses in Agriculture and Dairying and in Textile Industry, beginning at the opening of College in January and extending to the close of the term ending in March.

IV. Normal Courses for the training of teachers along industrial lines.

V. The Summer School.

VI. Graduate Courses, extending over two years and leading to advanced degrees, are intended for students who have completed the Four-year Courses and who desire further instruction and training along special lines.

AGRICULTURAL COURSES.

I. The Four-year Course in Agriculture.

1a. The Two-year Course in Agriculture.

1b. The Winter Course in Agriculture and Dairying.

Aim and Scope.—The aim of the Agricultural Courses is to train young men in both the science and the practice of their profession. It is believed that every young man preparing to farm needs a double education—one that is practical, to fit him for his profession; another that is cultural, to fit him to live.

In order to meet the necessities of all young men who desire instruction in Agriculture, the College offers four distinct courses:

The four-year course aims to give a training that is thoroughly practical as well as scientific in Agriculture and its various branches, such as Stock-raising, Dairying, and Horticulture. The strictly technical portion constitutes about one-third of the work. Of the remaining two-thirds of the course more than one-half is prescribed in the sciences. This is done for the training and information they give, and to prepare for the technical work of the course. Because of this, and because the subject-matter and the methods of the technical portion lie so fully within the domains of science, the course is essentially scientific rather than literary. Yet the College is mindful of the fundamental character of English Literature and of Political Economy as training studies, and reasonable attention to these studies is required.

The two-year course is designed to meet the needs of those who are unable to take the longer course. It is especially devoted to the practical study of Agriculture and Horticulture and their various branches, and the natural sciences which are so closely related to farming.

The ten-weeks winter course in Agriculture is established to meet the needs of those who can spend only the winter at the College. The important and practical subjects of Agriculture and Horticulture and Stock-raising receive principal attention.

The ten-weeks dairy course is a course in practical butter-making in accordance with the most approved methods of the modern creamery.

Methods of Instruction.—Instruction is by laboratory work, supplemented by text-books, lectures, and reference readings, which are almost constantly assigned from standard volumes and periodicals.

The equipment for the technical work of the course is rapidly increasing. The Department of Agriculture is fitting up laboratories for investigation in Soil Physics and in the mechanical analysis of soils. The Dairy Department is equipped with a modern creamery for pasteurizing, separating, creaming and churning, and for investigation in dairy bacteriology.

The department makes free use of the fields, orchards and gardens, in which the Agricultural Experiment Station conducts experiments in methods of culture, in effects of several practices upon yield and upon fertility, in varieties of fruit, of vegetables and of forage crops. The methods employed and the results obtained are freely used for instruction.

In work other than purely technical the agricultural students meet the same instructors and enjoy the same privileges as other students of the College. In all departments the laboratory method is freely employed. The student uses apparatus with his own hands and consults the literature of the subject at every step.

Self-support while a Student.—The Board of Agriculture, in the interest of young men who are unable to meet necessary college expenses, has appropriated \$1,500 annually for student labor. This generosity on the part of the Board enables every student to pay a good part of his college expenses: some are able to meet the entire expense this way. This sum appropriated is intended solely to pay for farm work. The work is precisely the sort of work that is done on the farm—plowing, hauling, tile-laying, feeding beef cattle, feeding dairy cattle, feeding and grooming horses, running ditches and terraces, repairing machinery and tools, harvesting crops, the care of hogs, poultry, etc.

This feature in the course of Agriculture is helpful not only in defraying college expenses, but serves as a training and education as well.

Requisites for Admission.—Applicants for admission to the four-year course in Agriculture must be at least sixteen years of age. They are examined in the following subjects: Arithmetic (complete), Algebra (through simple equations), English Grammar, and American History.

For the two-year course in Agriculture no entrance examinations are required if the applicant is at least twenty years old. Applicants not twenty years old desiring to enter the two-year course will stand an examination in Arithmetic (through decimal fractions), English Grammar and Composition, and American History.

For the winter courses in Agriculture and Dairying no entrance examination is required, but applicants must be over eighteen years of age.

I. Four-year Course in Agriculture, leading to the Degree of Bachelor of Agriculture.

WINTER COURSES IN AGRICULTURE AND DAIRYING.

General Statement.—The Winter Course in Dairying and the Winter Course in Agriculture are designed to meet the wants of young men who are ambitious to excel in their chosen vocation of farming and who feel the need of more and better preparation before taking up their life-work. The subjects presented in the two courses are those about which every young farmer should have definite and clear knowledge. In their treatment the topics are handled in such a way as to make the information to the student useful in the highest possible degree.

There is no longer any question concerning the value of advanced, definite knowledge concerning agriculture to those who follow farming. Education and training pay on the farm as they do elsewhere in life.

The expenses of the course are so little, and the good to be derived so great, no young man in North Carolina can afford to miss the opportunity of getting this training so necessary in his work. The money necessary to meet the expenses for a whole term's instruction can be earned in a month or two before attending. Therefore no young man, even though he possess but a few dollars, can afford to miss the opportunity for training in his work.

The studies offered are dairying, stock-raising, creamery practice, stock-feeding, diseases of farm animals, dairy-farming, breeding farm animals, entomology, dairy chemistry, farm economics, and book-keeping. The class-room work is supplemented by practice in the creamery, barn, greenhouse, and workshop.

Equipment.—The work in dairying, which includes butter-making, milk-testing, handling cream separators, pasteurizing cream and milk, and dairy bacteriology, is given in the Dairy Building. The building is equipped with separators, milk-testers, pasteurizer, and all tools required in making butter and preparing milk or cream for the city markets.

Requirements for Admission.—No entrance examination is required, but the students taking either the Dairy or Winter Course must be at least eighteen years of age and should have a common-school education.

Expenses—College Dues.—Each student is required to pay a laboratory fee of five dollars. Tuition and instruction are entirely free.

Other Expenses.—Books and note-paper will cost from two to three dollars, and two white duck suits to wear in the dairy laboratory will cost one dollar each. The suits, however, are not required.

Board and room may be secured for three dollars a week. The total expenses of the whole ten weeks need not exceed thirty dollars.

1b. The Winter Course in Agriculture and Dairying.

Butter-making.—This course includes all practical operations of creamery management. The student works with the guidance and under the direction of the instructor at the same operations of butter-making, or pasteurizing, or milk-testing, until proficiency is obtained. He is required to follow the milk from the time it enters the laboratory and creamery until the product leaves it, and determine the points in processes where losses occur and reasons why they occur. Six periods. Mr. KENDALL.

Milk and Butter Production.—This course consists of lectures and recitations on the methods of taking care of milk and the manufacturing of it into other products, also lectures upon construction, equipment and operation of creameries, dairies, and milk depots. Each student is required to draw a plan of a farm dairy and prepare an estimate for equipment of same. Two periods. Mr. KENDALL.

Feeds and Feeding and Stock-raising.—This subject consists of an elementary study of the composition of foods; the constituents of feeding, amount, combination and form necessary to give best results with various kinds of live stock.

The student is required to calculate digestibilities and nutritive ratios and to arrange therefrom proper feeding rations. Two periods. Professor BURKETT.

Dairy Farming.—Lectures are given under this subject upon the history, adaptation, care and management of the different breeds of dairy cattle. Dairy animals are studied by the score card, in accordance with the practice of judging animals for dairy purposes.

Instruction will also be given upon the character of food-stuffs, the relation of food to the animal, and kind and quality of food for the best milk production. Two periods. Professor BURKETT.

Soil Study.—Lectures and recitations upon composition, formation, kinds and physical properties of soil and their improvement by cultivation, natural and artificial fertilizers, drainage, etc.

The work in class-room is supplemented by work in the field and soil physics laboratory. One period. Assistant Professor McCLELLAND.

Farm Crops.—In this subject is included rotation of crops, green manuring, and a critical study of corn and cotton; judging of corn; condition of germination and growth, and improvement by selection and breeding. One period. Assistant Professor McCLELLAND.

Soils and Fertilizers.—Lectures on fertilizers and fertilizing materials and on the typical classes of North Carolina soils. Two periods. Director KILGORE.

Farm Chemistry.—Lectures on air, water, the chemistry of plant and animal nutrition, and the composition of milk and its products. Two periods. Professor WITHERS.

Plants.—This course treats of plants in general, embracing such subjects as plant breeding, seed selection, seed testing, plant propagation, nutrition, and classification, plant diseases and their prevention, and bacteria and fungi in their relation to farm produce, treating of both the beneficial bacteria of farm processes, treating of both the bacteria beneficial in farm operations and of injurious bacteria which produce disease, etc. Two periods. Professor STEVENS.

Economic Entomology.—This is a short course in which the more important noxious insects are studied, with special reference to methods of preventing their injuries. The various insecticides and methods of spraying are also included in this course. Two periods. Mr. WOGLUM.

Diseases of Live Stock.—The lectures on this subject treat of elementary veterinary anatomy and physiology, the care of live stock to prevent disease and the treatment of some of the most common diseases. Four periods. Professor BUTLER.

AGRICULTURE.

Equipment.

The College possesses the following equipment for instruction in Agriculture:

The farm includes six hundred and twenty-five acres, with two hundred and fifty acres under cultivation; a large three-story basement barn, 50 by 72 feet. The first floor is occupied by farm implements and machinery; the second story is occupied by horses, grain-bins, cutting implements, etc.; the third story, by hay, which is elevated by a Ricker and Montgomery hay-carrier. Just outside the barn are two 70-ton silos and one 125-ton silo. These are connected with a No. 18 Ohio feed and ensilage cutter. Power for cutting is supplied by an eight-horse power Skinner engine. The farm is supplied with all necessary machinery for the most successful and up-to-date farming.

The Dairy Building contains three rooms and cellar, and is supplied with De Laval, Sharples, United States, Empire, National, and Reid Separators, Babcock Testers, various kinds and makes of churns, butter-workers, and cheese apparatus, etc.

The live stock consists of necessary horses and mules, a herd of dairy cattle, and a herd of swine. The Poland China and Berkshire swine are pure bred, and from high-class specimens. Breeding-stock is sold as a part of the farm products.

The poultry-yard is divided into sixteen lots. The buildings consist of incubator cellar, brooder-house, and hen-houses. Several different incubators are used. The poultry-yards contain the following breeds: White Wyandotte, White and Barred Plymouth Rock. Black Minorca, Brown Leghorn, Light Brahmas, and Pekin Ducks.

Subjects of Instruction.

1. Breeds of Live Stock.—Lectures and recitations upon the history, characteristics, care and management, and adaptation of the different breeds of live stock. Practical exercises are given in scoring and judging the various kinds of live stock with the score card. Four periods, first term. For Sophomores and second-year students. Professor BURKETT.

2. Thremmatology.—Lectures and recitations upon the laws of inheritance, and the principles and phenomena of evolution as applicable to the improvement of animals or plants. The aim is to bring every known principle of reproduction to the assistance of the breeder's art. Practical exercise in scoring and judging live stock, and in writing and tracing pedigrees. Four periods, second term. For Sophomores and second-year students. Professor BURKETT.

3. Stock-feeding and Hygiene.—Lectures and exercises upon the laws of nutrition, and the character of food-stuffs, and the kind and quality of foods to produce certain results. Practical exercises in calculating digestibility, nutritive ratios, and feeding standards. Four periods, third term. For Sophomores and second-year students. Professor BURKETT.

4. Farm Equipment.—Lectures and recitations upon selecting, planning and equipping farms; planning and erecting farm buildings; farm vehicles and machinery; power, water, and drainage; practical exercise in drawing plans of farms and farm buildings; leveling and laying drains, dynamometer tests of wagons and farm implements, etc. Four periods, first term. For Juniors and second-year students. Assistant Professor McCLELLAND.

5. Soils.—Lectures and recitations upon composition, formation, kinds and physical properties of soils and their improvement by cultivation, natural and artificial fertilizers, drainage and irrigation. Practical exercises in testing physical properties of several soils, determining the relation of soils to heat, moisture, air, and fertilizers.

and mechanical analysis. Four periods, second term. For Juniors and second-year students. Assistant Professor McCLELLAND.

6. **Farm Crops.**—Lectures and recitations upon the history, production, harvesting and marketing of farm crops. Practical exercise with growing and dried specimens of farm crops, including grasses, clovers, and other forage crops. Four periods, third term. For Juniors and second-year students. Assistant Professor McCLELLAND.

7. **Farm Machinery.**—Lectures and laboratory work on the tools and machinery of the farm, in reference to their design, construction, draft, durability, and care. The student is required to set up and test the various machines used on the farm. One period, third term. For second-year students. Assistant Professor McCLELLAND.

8. **Animal Husbandry.**—A critical study of the horse; his breeding and management; gaits; practice in expert judging of horses. Two periods, first term. For Seniors. Professor BURKETT.

9. **Animal Husbandry.**—A critical study of beef and dairy cattle; the breeding, feeding and management, and practice in expert judging of cattle. Two periods, second term. For Seniors. Professor BURKETT.

10. **Animal Husbandry.**—A critical study of sheep and swine in reference to type, wool or mutton, pork or bacon. The breeding, feeding and management of sheep and swine, and practical exercise in expert judging of sheep and swine. Two periods, third term. For Seniors. Professor BURKETT.

11. **Agronomy.**—A critical study of the farm crops, corn and cotton; judging corn; conditions of germination and growth, and improvement by selection and breeding. Three periods, first term. For Seniors. Assistant Professor McCLELLAND.

12. **Special Crops.**—Special crops will be studied by the student in the laboratory and field. Three periods, second term. For Seniors. Assistant Professor McCLELLAND.

13. **Soil Physics and Management.**—This course is designed for advanced work in the study of soils, both in the laboratory and the field. Three periods, third term. For Seniors. Assistant Professor McCLELLAND.

14. **Dairying.**—Practice and occasional lectures. The course consists in general management of modern dairying, the methods of milk analysis, the bacteriology of milk, the use of separators, the testing of milk, ripening of cream, churning, working, packing, and scoring butter. Five periods, third term. For Freshmen. Five periods, first term. For first-year students. Professor BURKETT and Mr. KENDALL.

15. Dairy Bacteriology.—A laboratory course in the study of bacteria in its relation to creamery, butter-making, and cheese production. Three periods, first term. For Seniors. Mr. KENDALL.

16. Experimental Dairying.—Laboratory practice in making butter and cheese. Three periods, second term. For Seniors. Mr. KENDALL.

17. Dairy Seminary.—Laboratory practice in making butter and cheese of special commercial importance. Three periods, third term. For Seniors. Mr. KENDALL.

18. Farm Management.—Lectures upon the history of agriculture; present agricultural methods in various counties, cost and relation, profits of various farm operations and systems. Two periods. For Seniors. Professor BURKETT.

HORTICULTURE.

The Horticultural Department occupies Primrose Hall and the greenhouses connected with it. This building contains an excellent class-room and two good laboratories. The laboratories are used for such work as seed-testing, seed selection, bud studies, budding, grafting, making of cuttings, transplanting, and mixing of spraying materials.

The greenhouses consist of three glass structures heated by hot water. They are used for the growing of ornamentals, vegetables, and many interesting exotic plants; a large amount of laboratory work is also carried on in these houses.

The student learns the use, importance, and culture of these plants. Many of them are also used to illustrate interesting and instructive characteristics of plant life.

The department is well supplied with apparatus for laboratory work, such as apparatus for seed-testing, budding knives, grafting tools, pruning shears and saws, and spray pumps.

The College campus is used in teaching ornamental gardening, and a study of economic trees and shrubs.

Subjects of Instruction.

21. General Horticulture.—This course consists of text-book and lecture work. It deals with the fundamental principles of Horticulture, as seed propagation, pruning, frosts, culture. Class-room and laboratory work. Five periods, first term. Required of Freshmen. Five periods, second term. Required of first-year students. Mr. REIMER.

22. Vegetable Gardening.—Text-book and lectures, accompanied by laboratory work. This course deals with the selection and prepara-

tion of soil, making of hot-beds and cold-frames, fertilizing, handling of seeds, irrigation, transplanting, marketing and storing, and the culture of all important vegetables. Special stress is laid on the trucking industry in North Carolina. Five periods, second term. Required of Freshmen. Five periods, third term. Required of first-year students. Mr. REIMER.

23. **Landscape Gardening.**—This course deals with the planning, arrangement and care of home grounds, parks, and cemeteries. Special stress is laid on home grounds. It treats especially lawns, trees and shrubs, flowers and flower-beds, and the grouping of these. The campus, city parks, and many beautiful home grounds give exceptional opportunities for this. Three periods, third term. Required of Juniors. Mr. REIMER.

24. **Fruit Culture.**—A course dealing with the location, soil, cultivation, fertilizing, pruning, spraying, harvesting and marketing of all the principal North Carolina fruits. Five periods, first term. For Seniors. Professor HUME and Mr. REIMER.

25. **Forestry.**—This course consists of a thorough study of the fundamentals of forestry. It deals especially with the need, influence, formation, care and improvement of forests. Also the cutting, use, and handling of forest products. A study is made of the various forest trees of greatest importance in America. Five hours, second term. For Seniors. Mr. REIMER.

26. **Horticultural Literature.**—During the last term the Seniors are given an opportunity to take up any special line of horticultural work they desire. The work will consist of a thorough study of all important literature on the particular subject the student is interested in. In class each student will be required to give a condensed account of his particular line of investigation as the work progresses. Required of horticultural students. Five hours, third term. For Seniors. Professor HUME and Mr. REIMER.

BOTANY AND VEGETABLE PATHOLOGY.

Equipment.

Three commodious laboratories and a large recitation and lecture-room are devoted to Botany, Bacteriology, and Vegetable Pathology. A research-room is provided for the use of advanced students. There are also offices for the professor and instructors; a store-room, a dark-room, an incubator-room, and a cold-room. All rooms are supplied with electricity, gas, hot and cold water, and the bacteriological laboratory is, in addition, provided with steam under 80 pounds pres-

sure for purposes of sterilizing. The laboratories are supplied with wall-cases, shelves, herbarium cases, specimen boxes, sterilizers, incubators, microscopes, microtomes, a liberal supply of glassware, and such small utensils as are needed in the prosecution of the work. The incubator-room is fire-proof and is provided with a Weisnegg regulator capable of keeping the temperature of the room practically invariable. The excellent herbarium has been mounted and is now accessible for class use. There is an extensive collection of seeds, both of weeds and cultivated plants, and the most important plant diseases are represented by herbarium and alcoholic specimens. The greenhouse is of great utility as a source of material for seed-testing and for conducting experiments in plant physiology and pathology.

Subjects of Instruction.

31. Elementary Botany.—Weekly lectures, accompanied by laboratory work and reference reading regarding the algæ, fungi, ferns, and seed plants. Morphology is emphasized, and the broad principles of nutrition, reproduction, growth, sex, adaptation, and evolution are illustrated. Particular consideration is given to the fungi and seed-plants. The principles of plant-breeding, crossing, pollination, budding, and grafting are taught. The student's knowledge is made his own through field-work and simple independent investigations. Three periods. Required of Freshmen and first-year students. Professor STEVENS.

32. Systematic Botany.—The student becomes acquainted with the principal orders and families of plants of North Carolina, as well as with the general problems of plant classification. Attention is given to the grouping of plants into societies and to the study of plant variation and adaptation. Three periods, third term. Required of Sophomores. Professor STEVENS.

33. Economic Botany.—A study of the more important groups of economic plants, weeds and medicinal plants, seed-testing, nitrification, denitrification, and nitrogen fixation, origin of cultivated plants and of bacteria and fungi in their relation to Agriculture. Two periods, third term. Elective for Seniors. Professor STEVENS.

34. Plant Diseases.—Lectures and laboratory study of the principal types of plant diseases produced by bacteria, fungi, or physiological derangement, with specific consideration of the methods of treatment. This course emphasizes the principles of plant disease and places the student in a position to employ prophylactic and remedial methods rationally. Three periods, first term. Required of Sophomores and second-year students. Professor STEVENS.

35. Plant Disease (Advanced).—Methods of culture and investigation of plant disease. This course is intended to prepare the student for original investigation in plant diseases. Two periods, first term. Elective for Seniors. Professor STEVENS.

36. General Bacteriology.—Lectures and laboratory work on the physiology, morphology, and economy of bacteria, with especial reference to home sanitation, disinfection, and to the relation of bacteria to disease in plants and animals. The student becomes familiar in the laboratory with methods of culture and investigation in bacteriology. Two periods. Required of Juniors. Professor STEVENS and Mr. TEMPLE.

37. Bacteriology (Advanced).—A course designed to perfect the technique in bacteriology for those who desire to do original work in bacteriology. Work may be elected in sewage bacteriology, dairy bacteriology, bacterial plant diseases, bacteriology of manure, water, soil, or air. The course is flexible and will be made to fit the requirements of those students electing it. Two periods. For Seniors. Professor STEVENS.

VETERINARY SCIENCE.

The object of the teaching in this department is not to turn out veterinarians, but to more thoroughly equip the agricultural student for the breeding and management of live stock. In addition to the work required of all students in the Agricultural courses, as outlined below, the Senior students in the four-year course in Agriculture may elect to do three periods a week during the entire year. When so elected, this work will be of a more advanced nature, but supplementary to that required of all students in the Agricultural courses.

41. Veterinary Anatomy.—Lectures, illustrated by charts, models, skeletons, sketches, and by dissections.

Special attention will be given to the organs of digestion and locomotion and such other parts as are of particular interest to the stock farmer. Four periods, first term. Required of Juniors and second-year students. Doctor ROBERTS.

42. Veterinary Medicine.—Lectures on the actions, uses, and doses of the most common veterinary medicines, and the nature and cause of disease, with special reference to its prevention. Four periods, second term. Required of Juniors and second-year students. Professor BUTLER and Doctor ROBERTS.

43. Veterinary Practice.—Lectures on the most common diseases and injuries of domestic animals, with appropriate treatment for the same. When practicable, these lectures will be illustrated by clinics,

which will enable the student to become more familiar with the different diseases and perform minor surgical operations under the direction of the instructor. Four periods, third term. Required of Juniors and second-year students. Professor BUTLER and Doctor ROBERTS.

44. **Veterinary Medicine.**—Advanced course in veterinary medicine and surgery. Three periods. For Seniors. Professor BUTLER.

ZOOLOGY.

46. **Elementary Zoology.**—The fundamental principles of animal life, together with a knowledge of the structure and classification of animals, are developed by lectures, laboratory work, and reading. One term is devoted to vertebrates and invertebrates, exclusive of insects, but including some of the common parasites infesting man and the domestic animals. This course is intended to present a general view of the animal kingdom and to lay a foundation for the more special subjects that are to follow. Four periods, first term. Required of Freshmen and first-year students. Doctor ROBERTS.

47. **Animal Physiology.**—A comparative study of the bodily functions of man and of the domestic animals. The subject will be covered by lectures and recitations, with laboratory experiments to illustrate principles of physiology. Four periods, second and third terms. Required of Freshmen and first-year students. Doctor ROBERTS.

ENTOMOLOGY.

51. **Elementary Economic Entomology.**—Elements of insect structure and classification. Injurious insects and remedies: *a*, of orchards; *b*, of small fruits; *c*, of truck and garden crops; *d*, of cotton, corn, tobacco, grains, and grasses; *e*, of forest, shade, and ornamental plants; *f*, of barn, mill, and household. Lectures and demonstrations. Three periods, second term. Required of Sophomores and second-year students. Mr. SHERMAN and Mr. WOGLUM.

52. **Systematic Entomology.**—Systematic study of orders and families of insects, with special reference to structure, classification, life-history and habits. Lectures and laboratory practice. Two periods, second and third terms. For Seniors and Juniors. Mr. SHERMAN and Mr. WOGLUM.

GEOLOGY.

58. **Geology.**—*Scott's Introduction to Geology.* In the first part of the course the principles of Dynamical Geology, the forces which have modified and are still modifying the earth, are considered. The re-

sults of those forces are seen and studied in the structure of the earth and in the phenomena of volcanoes, earthquakes, faults and folds, crust movements, etc. In the latter part of the course the life-history of the earth as recorded in the rocks is studied. Special attention is given to the commonly occurring rocks and ores, and the main features of the geology of North Carolina form an integral part of the course. The text is supplemented by lectures. Two periods. Required of Seniors. Dr. WALKER.

CHEMISTRY.*

61. *Inorganic Chemistry*.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated with experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS, Mr. BAGLEY, and Mr. HARPER.

62. *Inorganic Chemistry*.—Laboratory work. Remsen and Randall's *Chemical Experiments*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. WILSON.

63. *Organic Chemistry*.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Two periods. Elective for Seniors. Professor WITHERS.

64. *Analytical Chemistry*.—Treadwell's *Qualitative Analysis*. A discussion of the principles involved in chemical analysis, together with laboratory work in qualitative analysis. The student is taught to detect the presence of the common metallic elements, as well as of the acids in unknown substances. A considerable portion of the time is given to lectures and recitations upon the principles involved in the different tests, writing reactions, etc. Nine periods, first term. Elective for Seniors. Dr. WALKER.

65. *Analytical Chemistry*.—Treadwell's *Quantitative Analysis*. Introductory work in gravimetric and volumetric analysis, followed by analyses of the substances most closely related to agriculture, as fertilizers, feeding stuffs, milk, butter, etc. A considerable portion of the time is given to the discussion of the principles involved in the different analytical methods. Nine periods, second and third terms. Elective for Seniors who have taken Course 64. Dr. WALKER.

*For further information, see course in Chemistry.

66. Agricultural Chemistry.—Ingle's *Agricultural Chemistry*. A study of the facts obtained by the application of chemistry and chemical methods of investigation to agriculture. The laws of plant and animal nutrition, the economical feeding of plants and animals, and the maintenance of the fertility of the soil are considered from the chemical standpoint. Two periods. Required of Juniors. Professor WITHERS.

68. Industrial Chemistry.—Thorpe's *Outlines of Industrial Chemistry*. A discussion of the processes and principles involved in the more important chemical industries, particularly those whose raw materials are supplied by agriculture or whose products are utilized in agriculture. Two periods. Elective for Seniors. Professor WITHERS.

PHYSICS.*

71. Elementary Physics.—Properties of matter; fundamental units. British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Two periods. Required of Sophomores. Mr. SPRAGUE.

DRAWING.†

76. Free-hand Drawing.—Work in the use of the pencil; technical sketches of objects, usually parts of a machine. Two periods, first term. Required of Sophomores. Mr. ST. AMANT.

77. Elementary Mechanical Drawing.—Use of instruments; geometric drawing; elementary projection; isometric and cabinet drawing; drawings made to scale from working sketches of pieces of a machine. Two periods, second and third terms. Required of Sophomores. Mr. ST. AMANT.

SHOP-WORK.‡

78. Wood-work.—Use of bench tools; working from drawings, lining, sawing, planing; practice in making simple exercises in wood; elementary exercises in wood-turning. One period, first and second terms. Required of Juniors. Required of second-year students. Mr. CLAY.

*For full information in regard to the Department of Physics, see course in Electrical Engineering.

†For full information in regard to shop-work, drawing, and other Mechanical Engineering subjects, see course in Mechanical Engineering.

79. **Forge-work.**—Exercises in forging and welding; making exercises of iron; care of forge tools and fires. One period, first and second terms. For Juniors. One period, third term. Mr. DEAL.

80. **Mechanical Technology.**—Classification and uses of wood-working and forging tools and machines; methods of wood-working and forging; care of belting and shafting. One period, first and second terms. For Juniors and second-year students. Mr. CLAY.

MATHEMATICS.*

82. **Arithmetic.**—Begin with decimal fractions and complete the subject. Five periods, first term. Milne's *Standard Arithmetic*. Required of first-year students. Mr. J. A. PARK.

83. **Algebra.**—Up to quadratic equations. Wells' *Higher Algebra*. Five periods, second and third terms. Required of first-year students. Mr. J. A. PARK.

84. **Advanced Algebra.**—Wells' *Higher Algebra*. Begin at quadratic equations; general theory of equations, solution of higher equations, etc. Four periods, first term. Required of Freshmen. Mr. YATES.

85. **Geometry.**—Plane and solid. Wentworth's *Plane and Solid Geometry*. Four periods, second and third terms. Required of Freshmen. Mr. YATES.

ENGLISH.

87. **English Composition.**—A drill on the forms of the language, the correct relation of words, the sentence, and the paragraph. Daily written exercises. Three periods. Required of first-year students. Doctor SUMMEY and Mr. MASON.

88. **Introductory Composition and Rhetoric.**—This course in the fundamentals of rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill upon grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods. Required of Freshmen. Professor HILL, Doctor SUMMEY, and Mr. MASON.

89. **Rhetoric, Criticism, Essays.**—The student is taught the essentials of a good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Three periods, first term. Professor HILL, Doctor SUMMEY, and Mr. MASON.

*For full information in regard to Mathematics, see course in Civil Engineering.

90. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of many exercises. Required of Seniors. Two periods, third term. Professor HILL.

91. American Literature.—By means of an introductory text and by much reading, students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Three periods, second and third terms. Required of Sophomores. Professor HILL, Doctor SUMMEY, and Mr. MASON.

92. English Literature.—The development of English literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two hours, second and third terms. Required of Juniors. Two periods, first and second terms. Required of Seniors. Professor HILL.

HISTORY.

93. English History.—The text is supplemented by lectures on important periods. Two periods, first term. Required of Juniors. Professor HILL.

BUSINESS LAW AND CIVICS.

95. Business Law.—This course includes such subjects as contracts, agency, sales, negotiable paper, insurance, patent rights, etc. The purpose of the course is to teach the general principles of business law. Text-book, Parsons' *Laws of Business*. One period, first half year. Required of Juniors. President WINSTON.

96. Civics.—This course includes instruction in the rights and duties of citizenship, with special reference to the laws of North Carolina. One period, second half year. Required of Juniors. President WINSTON.

POLITICAL ECONOMY AND GOVERNMENT.

97. Political Economy.—This course deals with public problems relating to the production, distribution and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. Two periods, first half year. Required of Seniors. President WINSTON.

98. Government.—The Constitutional History of the United States and North Carolina; relations between the State and Federal governments, etc. Lectures and texts. Two periods, second half year. Required of Seniors. President WINSTON.

MILITARY SCIENCE.

99. **Drill.**—School of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three periods, first term. Two periods, second and third terms. Required of all classes except Seniors. Commandant and Officers of the Battalion.

100. **Tactics.**—Theoretical instruction in Infantry Drill, Field Service, Army Regulations, Guard Duty, and Target Practice. One period. Required of Juniors. Lieutenant HEATON.

ENGINEERING COURSES.

Four-year Courses in

- II. Civil Engineering.
- III. Mechanical Engineering.
- IV. Electrical Engineering.
- V. Mining Engineering.
- VI. Industrial Chemistry.
- VII. Dyeing.

Two-year Courses in

- IIIa. Mechanic Arts.
- IVa. Applied Electricity.

COURSE IN CIVIL ENGINEERING.

The aim of the Course in Civil Engineering is to give such training as will enable our young men to take an active part in the work of advancing our State along material lines—developing its water-power, building railroads and public highways, constructing water supply and sewerage systems for our towns, etc. The student is given a large amount of practical work in the field and drafting-room, and acquires a fair degree of efficiency in the use of the various surveying instruments, and in drafting. At the same time it is recognized that a successful engineer requires a well-trained mind—one that reasons logically, accurately and quickly. Therefore a thorough course is given in Pure Mathematics and in all those branches of Applied Mathematics which are involved in the solution of engineering problems.

The aim has been to make this pre-eminently a technical course, yet subjects of general culture are included in order to give the student a broader mental training and better preparation for social and business life.

II. The Four-year Course in Civil Engineering, leading to the degree of Bachelor of Engineering.

Freshman Year.

CIVIL ENGINEERING.

Equipment.

There is a complete equipment of all instruments necessary to civil engineering field-work.

Subjects of Instruction.

101. Graphic Statics.—Determination of stresses in frame structures by graphical methods. Lectures and original problems. Two periods, second and third terms. Required of Juniors in Civil and in Mining Engineering. Professor RIDDICK.

102. Surveying.—Land surveying, leveling, elements of triangulation, topographical surveying, road-making. Merriman's *Land Surveying*. Two periods, first term. Required of Juniors in Civil and in Mining Engineering and of Seniors in Mechanical Engineering. Mr. LANG.

103. Railroad Engineering.—Reconnaissance, preliminary and location surveys, cross-sections, etc. Searles' *Field Engineering*. Two periods, second and third terms. Required of Juniors in Civil and in Mining Engineering. Mr. LANG.

104. Surveying.—Field-work. Use of instruments, compass, level, transit and plane table. Practical work in land surveying, topography, leveling, railroad surveying, working up notes and platting. Two periods. Required of Juniors in Civil and in Mining Engineering. Two periods, second and third terms. Required of Seniors in Mechanical Engineering.

105. Drawing.—Descriptive Geometry, Stereotomy. Text-book, lectures, problems, and completed drawings. Two periods, second and third terms. Required of Sophomores in Civil Engineering. Two periods. Required of Juniors in Civil Engineering. Mr. LANG.

106. Bridge Design.—Calculation of stresses, design, specifications and estimate of cost of a wooden roof truss and a steel highway bridge. Four periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

107. Municipal Engineering.—Text-books, lectures. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

108. Surveying.—Field-work. Triangulation and topography, surveys for sewers, water-works, etc. Two periods, first term. Required of Seniors in Civil Engineering. Mr. MANN.

109. Roofs and Bridges.—Determination of stresses in roof and bridge trusses by the analytical method. Merriman's *Roofs and*

Bridges. Original problems. Three periods, first term. Required of Seniors in Civil Engineering. Professor RIDDICK.

110. Hydraulics.—Methods of measuring flow of streams, laws governing flow in pipes and conduits, determination of water-power in streams, testing of hydraulic motors. Text-book. Merriman's *Hydraulics*. Three periods, second and third terms. Required of Seniors in Engineering. Professor RIDDICK.

111. Construction.—Masonry, foundations, railroads, dams, retaining walls, arches, etc. Baker's *Masonry Construction*. Lectures. Two periods, first term. Required of Juniors in Civil and in Mining Engineering. Two periods, second and third terms. Required of Seniors in Civil and Mining Engineering. Professor RIDDICK.

112. Mechanics of Materials.—Study of stresses in beams, columns, etc. Merriman's *Mechanics of Materials*. Three periods, first term. Required of Seniors in Civil and in Mechanical Engineering. Professor RIDDICK.

113. Road-building.—Text-book on construction of roads, streets, and pavements. Lectures on practical road-making in North Carolina. Two periods, first term. Required of Seniors in Civil Engineering. Professor RIDDICK.

114. Astronomy.—Determination of Azimuth, Latitude and Longitude, Time. Comstock's *Astronomy for Civil Engineers*. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

ARCHITECTURE.

115. Architecture.—Building materials, methods of constructing buildings, plans, specifications, bill of materials, estimate of cost, design of buildings. Lectures. Two periods, first term. Required of Sophomores in Civil Engineering. Professor RIDDICK.

116. Architectural Drawing.—Drawings from a building already constructed, design of a dwelling, detail and perspective drawings. Two periods. Required of Sophomores in Civil Engineering. Mr. MANN.

MATHEMATICS.

121. Arithmetic.—Milne's *Standard Arithmetic*. Begin with decimal fractions and complete the subject. Five periods, first term. Required of first-year students. Mr. J. A. PARK, Mr. MANN, and Mr. LANG.

122. Algebra.—Wells' *Higher Algebra*. Up to quadratic equations. Five periods, second and third terms. Required of first-year students. Mr. MANN, Mr. LANG, and Mr. J. A. PARK.

123. **Advanced Algebra.**—Wells' *Higher Algebra*. Begin at quadratic equations; general theory of equations, solution of higher equations, etc. Five periods, first term. Required of Freshmen and of second-year students in Mechanic Arts. Mr. YATES and Mr. J. A. PARK.

124. **Geometry.**—Plane and Solid. Wentworth's *Plane and Solid Geometry*. Five periods, second and third terms. Required of all Freshmen and of second-year students in Mechanic Arts. Five periods, first term. Required of Sophomores. Mr. YATES and Mr. J. A. PARK.

125. **Trigonometry.**—Five periods, second and third terms. Required of Sophomores. Mr. YATES.

126. **Analytical Geometry.**—Nichols' *Analytical Geometry*. Conic sections, higher plane curves. Geometry of three dimensions. Four periods, first and second terms. Required of Juniors in Engineering. Mr. YATES.

127. **Calculus.**—Osborne's *Elements of Calculus*. Differential and integral elements of differential equations. Four periods, third term. Required of Juniors. Three periods, first term. Required of Seniors in Engineering. Professor RIDDICK and Mr. YATES.

128. **Mechanics.**—Nature and measurement of forces, moments, conditions of equilibrium, moment of inertia, laws of motion, constraining and accelerating forces, dynamics of a rigid body, momentum and impact, work, power, friction, application of principles to various engineering problems. Three periods. Required of Juniors in Civil and Mining Engineering. Mr. LANG.

COURSES IN MECHANICAL ENGINEERING AND MECHANIC ARTS.

The regular Four-year Course in Mechanical Engineering is intended to fit the student for positions of responsibility in engineering work, and also to furnish him with a basis to carry on more advanced engineering studies. It treats of the development and transmission of power, the design and construction of machines, and the calibration and efficiency tests of machinery, boilers and engines.

The Two-year Course is offered to students who wish to become machinists, draughtsmen, stationary engineers, or dynamo tenders.

The courses follow closely the methods adopted by the large manufacturing companies, both in drawing-room system and shop methods.

III. The Four-year Course in Mechanical Engineering, leading to the degree of Bachelor of Engineering.

MECHANICAL ENGINEERING.

Equipment.

The drawing and recitation-rooms and shops of the Department of Mechanical Engineering are in the Engineering Building. They are of ample size and well lighted, and are arranged to be heated either by the exhaust steam from the engine or by live steam. On the first floor are the steam laboratory, machine shop, forge shop, wood-turning and carpenter shop, office and library. On the second floor are the recitation-room, two drawing-rooms, and a wood-finishing room. In the office are kept on file various scientific and technical journals, the trade circulars of prominent engineering firms, drawings and photographs of machinery, and tabulated data, as well as a large number of engineering books, the use of which is required.

The department is provided with the necessary apparatus for making boiler and engine tests and for other work of an experimental character. The equipment consists of a two-horse-power engine, a ten-horse-power engine, a one-horse-power gasoline engine (all of which were built by students), a twenty-five-horse-power Woodbury engine, a Wheeler surface condenser, connected with a $4\frac{1}{2} \times 6 \times 6$ Blake air-pump, an Ericsson hot-air pumping engine, apparatus for making analyses of flue gases, a fuel calorimeter, a water-motor, a Worthington water-meter, a complete Westinghouse air-brake equipment, a New York air-brake equipment in section, friction brakes, weirs, indicators, planimeters, slide rules, thermometers, calorimeters, gauges, tanks, scales, a Crosby gauge tester, two hydraulic rams, a 15,000-pound Olsen testing machine, and other apparatus for making tests.

The boiler-house is equipped with one thirty-horse-power and two forty-horse-power horizontal return tubular boilers and two seventy-five-horse-power Babcock and Wilcox boilers and several pumps, all of which are available for experimental purposes.

The shops are equipped as follows:

The wood-working equipment consists of fifteen double carpenters' benches, which accommodate thirty students, and all necessary tools for each bench; thirty 12-inch turning lathes, each lathe being fully equipped with turning tools: a rip and a cut-off saw bench, foot-feed, with dado attachment; a double revolving rip and cut-off saw bench, with dado attachment; a 20-inch surface planer; a 12-inch hand-jointer or buzz planer; a universal boring machine; a $6\frac{1}{2}$ -inch tenoning machine with cope heads; a 6-inch sash and blind sticker; a 30-inch band saw; a jig saw; a shaper or edge-moulding machine.

with a very complete set of moulding cutters; a 38-inch grind-stone; a wood trimmer; an adjustable miter-box; a steam glue-heater, and a large assortment of screw and bar clamps, both iron and wooden.

The forge shop is a well-lighted and ventilated, neatly-paved room, 30 x 40 feet. It is equipped with twenty-eight forges, blast being furnished from a Sturtevant blower; two emery and two buffing wheels; a Buffalo Forge Company's hand drill; an overhead exhaust system, operated by a 60-inch Sturtevant exhaust fan, for removing smoke from the fires; anvils and all necessary hand tools.

The machine shop contains a 16-inch Davis and Eagan lathe with 10-foot bed, a 14-inch Windsor lathe with 5-foot bed, a 13-inch Barnes lathe with 5-foot bed, a 14-inch Putnam lathe with a 4-foot bed, a 14-inch Flather lathe with 6-foot bed, three 14-inch lathes with 6-foot bed (built in the College shops by students), an 18-inch Prentiss shaper, a 24-inch upright Bickford drill press, a 32-inch American drill press, a Brown & Sharp universal milling machine with all attachments, a 20-inch by 5-foot Pease planer, one large and one small emery tool-grinding machine, a 6-inch Curtis & Curtis pipe-threading and cutting machine, a Greenwich arbor press and an electric center grinder. The machines have full equipment of chucks, rests, and tools. The benches are well provided with vises.

The tool-room is well equipped with the necessary hand and pipe tools.

The power for the shops is furnished by a twenty-five-horse-power Woodbury engine. When the shops are running one of the students has charge of the engine.

Subjects of Instruction.

135. Free-hand Drawing.—Work in the use of the pencil; technical sketches of objects, usually parts of a machine; use of instruments, and tracing. Two periods, first term. Required of Freshmen. Four periods, first term. Required of first-year students. Mr. St. AMANT.

136. Elementary Mechanical Drawing.—Geometric drawing, isometric and cabinet drawing, elementary projections, drawings made to scale from working sketches of pieces of a machine. Two periods, second term. Required of Freshmen. Four periods, second term. Required of first-year students. Mr. St. AMANT.

137. Descriptive Geometry Drawing.—Elementary principles; cylinders, cones, and prisms, intersections, development of surfaces. Miscellaneous problems. Two periods, third term. Required of Freshmen. Four periods, third term. Required of first-year students. Mr. St. AMANT.

139. Mechanical Drawing.—Working sketches and drawings of machine parts from the model. Tracing and blue-printing. Elementary machine design. Two periods. Required of Sophomores in Mechanical, Electrical, and Mining Engineering, Chemistry and Dyeing. Mr. LAWRENCE.

140. Machine Design.—Study of the communication of motion by gear wheels, cams, belts, and link-work; automatic feed, parallel and quick motions. Epicyclic trains. Calculations and working drawings of machine parts, such as fastenings, hangers, couplings, and bearings. Estimating and checking of working drawings. Two periods. Required of Juniors in Mechanical Engineering. Mr. LAWRENCE.

141. Machine Design.—Estimating, checking of working drawing, original design. Calculations and working drawings of types of engines, boilers, pumps, condensers, shafting, etc. Two periods, first term. Three periods, second and third terms. Required of Seniors in Mechanical Engineering. Mr. LAWRENCE.

Students are required to stamp their drawings with the College stamp, similar to the practice in the drawing-rooms of the large manufacturing companies. Encouragement is given to original design, especially when carried through the shops to a complete working machine.

146. Wood-work.—Use of bench tools, working from drawings, lining, sawing, planing. Practice in making simple exercises in wood. Elementary exercises in wood-turning. Two periods. Required of Freshmen. Two periods. Required of first-year students. Mr. CLAY and Mr. DEAL.

147. Forge-work.—Exercises in working with iron. Welding. Uses and care of forge tools and fires. Two periods. Required of Freshmen and first-year students. Mr. DEAL.

148. Forge-work.—Exercises in working with steel. Tempering. Case-hardening. One period, first term. Required of Sophomores in Mechanical, Electrical, and Mining Engineering, Chemistry and Dyeing. Mr. DEAL.

149. Pattern-making.—Exercises in making patterns and moulds of machine parts. One period, second and third terms. Required of Sophomores in Mechanical, Electrical, and Mining Engineering, Chemistry and Dyeing. Mr. CLAY.

150. Machine-shop Work.—Bench and machine-work. Exercises in chipping and filing. Exercises in lathe-work, boring, reaming, drilling, planing, milling, and shaper-work. Two periods. Required of Juniors in Mechanical and Electrical Engineering. Three periods. Required of second-year students in Mechanic Arts. Mr. PARK.

151. Machine-shop Work.—Making the parts of some machine, or of an engine. Making tools, such as taps and reamers. Laying out work. Three periods. Required of Seniors in Mechanical Engineering. Mr. PARK.

In all practical courses the student's attention is directed to cost of production and its principal elements—time and method.

152. Mechanical Technology.—Classification and uses of wood-working and forging tools and machines. Methods of wood-working and forging. Care of belting and shafting. One period. Required of first-year students in Mechanic Arts. Mr. CLAY.

157. Boilers.—Steam generation; types, care and management; fittings and appliances; corrosion and incrustation; combustion of fuel. Boiler power. Two periods, first term. Required of Juniors in Mechanical Engineering, and of Seniors in Electrical and in Mining Engineering and in Dyeing. Professor THOMAS.

158. Steam Engines.—Types—simple and compound, and triple expansion, automatic, Corliss, rotary, turbines. Care and management. Indicators, indicated and brake horse-power. Condensers. Two periods, second term. Required of Juniors in Mechanical Engineering, and of Seniors in Electrical and Mining Engineering and in Dyeing. Professor THOMAS.

159. Valve Gears.—Plain slide valve, balance valve, Corliss and other form valve gears, link and radial reversing gears. Shaft governors. Bilgram and Zenner valve diagrams. Two periods, third term. Required of Juniors in Mechanical Engineering, and of Seniors in Mining Engineering and in Dyeing. Professor THOMAS.

161. Power Plants.—Mechanical Engineering of power plants. Selection and arrangement of machinery, appliances, piping. Two periods, third term. Required of Seniors in Mechanical Engineering. Professor THOMAS.

162. Gas Engines.—Theory of the gas engine. Various types of gas, gasoline, and oil engines. Brake and indicated horse-power; efficiency. Gas producers. Two periods, first term. Required of Seniors in Mechanical Engineering. Professor THOMAS.

163. Refrigeration.—Various types of ice-making machinery. Compression and absorption systems. Compressed-air machines. Two periods, second term. Required of Seniors in Mechanical Engineering. Professor THOMAS.

165. Pumping Machinery.—Direct acting, fly-wheel and duplex and centrifugal pumps. Pumping engines. Water-works machinery. Duty and efficiency. Hydraulic engines. One period, second term. Required of Seniors in Mechanical Engineering. Professor THOMAS.

166. Heating and Ventilation.—Steam, hot water, furnace and blower systems of heating. Heating boilers. Ventilation. Design of heating and ventilating system. One period, second and third terms. Required of Seniors in Mechanical Engineering. Professor THOMAS.

167. Structural Engineering.—The manufacture and uses of different metals—rolled sections used in bridge, structural work, and general engineering. One period, third term. Required of Seniors in Mechanical Engineering. Mr. LAWRENCE.

168. Steam Engineering Laboratory.—Practice in engine running; valve-setting; calibration of instruments; testing gauges and lubricants. Use of indicators and calorimeters. Boiler tests; engine tests. Two periods. Required of Seniors in Mechanical Engineering. One period. Required of Seniors in Electrical Engineering. One period, third term. Required of second-year Mechanic Arts and Applied Electrical students. Professor THOMAS and Mr. LAWRENCE.

169. Applied Mechanics.—Nature and measurement of forces, moments, conditions of equilibrium, moment of inertia, laws of motion, constraining and accelerating forces, dynamics of a rigid body, momentum and impact, work, power, friction, application of principles to various engineering problems. Three periods. Required of Juniors in Mechanical and Electrical Engineering. Mr. LAWRENCE.

171. Mechanical Drawing.—Sketching and drawing of machine parts and machines. Detail working drawings. Tracing and blue-printing. Two periods. Required of second-year Mechanic Arts students. Two periods, first term. Required of second-year students in Applied Electricity. Mr. LAWRENCE.

172. Mechanical Technology.—Classification and use of hand-tools and machines usually found in the pattern shop, foundry, and machine shop. Materials used and methods of carrying on work in these shops. Practical problems in estimating cost and material required to complete a piece of work; arrangements and sizes of belting, pulleys, and shafting. One period. Required of second-year students in Mechanic Arts and Applied Electricity. Professor THOMAS.

173. Steam and Steam Machinery.—Descriptive study of the machinery of steam power plants—engines, boilers, condensers, pumps, piping. Care and management. Combustion of fuels. Indicators; indicated, brake and boiler horse-power problems. Two periods. Required of second-year students in Mechanic Arts and Applied Electricity. Professor THOMAS.

COURSE IN ELECTRICAL ENGINEERING.

Object.—The four-year course is designed for those who wish a thorough and practical training in Electrical Engineering. Only a

most thorough training in the fundamental facts and principles of the science of electricity and magnetism will be satisfactory for a branch of engineering which is advancing so rapidly. A great deal of attention is, therefore, paid to good text-book work, and as soon as the first principles of the science are mastered by the student, he is given a series of experiments in which careful measurements with exact instruments are made.

The department, as can be seen from the list of apparatus, is well equipped with dynamos, electric motors, and testing instruments for experimental work and for investigation of problems in electrotechnics. During the Senior year a course in designing the various electrical machines is given.

A two-year course in Applied Electricity is offered to those who wish to fit themselves for positions as dynamo-tender, motorman, or electrician.

IV. The Four-year Course in Electrical Engineering, leading to the degree of Bachelor of Engineering.

Freshman Year.

PHYSICS.

Equipment.

The recitation-rooms and laboratories of the Department of Physics are situated in the basement of the principal building. They are spacious and well lighted.

The equipment consists of apparatus for illustrating the principles of physical science and for instruction and practice in experiments, measurements, and tests.

Subjects of Instruction.

176. **Elementary Physics.**—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Four periods. Required of Freshmen. Professor PAINE.

177. **Elementary Lessons in Electricity and Magnetism.**—Two periods. Required of Sophomores. Professor PAINE.

178. **Physical Laboratory.**—Fundamental measurements of length, mass, and time. Determination of laws and forces, velocities, friction, and periodic motion. Study of mechanical advantage and efficiency of simple machines. The strength of various metals and wood. One period. Required of Freshmen. Mr. SPRAGUE.

179. Physical Laboratory.—Continuation of Course 178. Expansion of metals, latent heat of steam. Elementary experiments in electricity and magnetism. One period. Required of Sophomores in Electrical and Mechanical Engineering. Mr. ADAMS.

180. Electrical Laboratory.—Use of laboratory instruments. Measurement of resistance, current, and electro-motive force. Use of condensers. Electrical testing of lines for insulation and grounds. Magnetic properties of iron. Two periods. Required of Juniors in Electrical Engineering. Mr. ADAMS.

ELECTRICAL ENGINEERING.

Equipment.

The electrical engineering laboratory is a small brick building 30 by 50. It contains the electric light plant, consisting of a 35-horse-power automatic Skinner engine, an 11.5 K. W. 110-volt Westinghouse dynamo, a 30 K. W. 3-phase 550-volt Westinghouse alternator, and a 20 K. W. 2-phase 110-volt Lincoln alternator. The laboratory contains in addition to this one 6-light T. H. arc machine, one 1-horse-power Sprague motor, one 8 K. W. 110-volt Siemens & Halske dynamo, connected in such a way as to give 3-phase currents, one 2-horse-power 3-phase 110-volt Gen. Elect. Co. motor, one 2 K. W. 110-volt LaRoche alternator. It also contains transformers, condensers, arc lamps, circuit breakers, etc.

The department possesses a small library of standard books on all branches of physics and electrical engineering.

183. Dynamo Machinery.—A study of direct current dynamos and motors. Efficiency. Characteristic curves. Required of Juniors in Mechanical and Electrical Engineering. Two periods. Professor PAINE.

184. Alternating Currents of Electricity.—Principles of alternating currents. Alternating current generators and motors. Static and rotary transformers. Three periods, first term. Required of Seniors in Electrical Engineering. Professor PAINE.

185. Electric Power Transmission.—Direct current systems. Power transmission by single and polyphase alternating currents. Long distance, high potential lines. Three periods, second term. Required of Seniors in Electrical Engineering. Professor PAINE.

186. Electric Light and Railway Systems.—The design and operation of lighting and railway plants. Estimates of costs. Three hours, third term. Required of Seniors in Electrical Engineering. Professor PAINE.

189. Electrical Engineering Laboratory.—Laboratory methods. Calibration of electrical measuring instruments. Study of direct current apparatus. Characteristic curves. Photometry. Efficiency of direct current generators and motors. Four periods, first term. Required of Seniors in Electrical Engineering. Mr. ADAMS.

190. Electrical Engineering Laboratory.—Characteristic curves of alternating current generators. Study of inductance and capacity. Efficiency of alternating current apparatus, including motors, generators and transformers. Four periods, second and third terms. Required of Seniors in Electrical Engineering. Mr. ADAMS.

191. Electrical Design.—The design of magnets, rheostats, dynamos, and transformers. Two periods. Required of Seniors in Electrical Engineering. Mr. ADAMS.

192. Electrical Engineering Practice.—The application of electricity for lighting and power. Electricity in cotton mills and machine shops. Two periods, third term. Required of Seniors in Electrical Engineering. Professor PAINE.

195. Physics.—The properties of matter. Mechanics. The principles of the simple machines. Five periods. Required of second-year students in Applied Electricity and in Mechanic Arts. Mr. SPRAGUE.

196. Electricity.—Principles of the electric circuit. Batteries. Electro-magnets. Dynamos. Motors. Electric bell, telephone, and telegraph systems. Five periods, second term. Required of second-year students in Applied Electricity and in Mechanic Arts. Mr. SPRAGUE.

197. Electrical Laboratory.—Management of dynamos and motors. Care of station equipment. Study of arc lamps. Transformers. Five periods, third term. Required of second-year students in Applied Electricity and in Mechanic Arts. Mr. SPRAGUE.

198. Electrical Construction.—Bell wiring. Electric light wiring. Coil winding for dynamo and motor fields. Armature winding. Repair of electrical apparatus. Two periods, second and third terms. Required of second-year students in Applied Electricity. Mr. ADAMS.

COURSE IN MINING ENGINEERING.

The course in Mining Engineering is intended to give the student the preliminary training necessary to enable him to enter upon a career in mining. To this end he is given instruction in English, History, Political Economy, and Mathematics, which are fundamental to the more technical studies and to the greatest usefulness as a citizen. Instruction in Physics and Chemistry, Mineralogy and

Geology, Surveying, Shop-work, Drawing, Machinery and Steam affords the scientific and engineering knowledge upon which the successful work of the miner must depend. The more technical portion of the instruction includes ore dressing, metal-working, ventilation, drainage, and illumination of mines.

V. The Four-year Course in Mining Engineering, leading to the degree of Bachelor of Engineering.

Freshman Year.

MINING AND METALLURGY.

206. Mining.—Lectures on methods of mining, including prospecting, sinking, sloping, hoisting, pumping, and ventilating; the location of mining claims, mine fires, fire-damp and dust explosions; inundations; rescue and relief of men. Four periods, second and third terms. Required of Seniors in Mining. Dr. WALKER.

207. Ore Dressing.—Furnishing products for metallurgical treatment. Lectures on concentrating machinery and concentrating and enriching ores by mechanical means. Four periods, first term. Required of Seniors in Mining. Dr. WALKER.

208. Metallurgy.—Introductory; combustion, calorific calculations, fuels, refractory materials, furnaces, etc. Iron and steel: the various iron and steel processes, metallography, heat-treatment, mechanical treatment, chemistry. Copper: roasting, smelting, refining, wet and electrolytic processes. Gold: stamp milling, amalgamation, cyanide and chlorination processes. The metallurgy of lead and the lesser metals. Two periods, second and third terms. Required of Seniors in Mining. Dr. WALKER.

209. Assaying.—Ricketts & Miller's *Notes on Assaying*. Lectures and laboratory practice in the crushing and sampling of ores; the assaying of gold, silver, lead, and other ores; corrected assays; bullion assays; extraction tests. Two periods, second and third terms. Required of Seniors in Mining. Dr. WALKER.

GEOLOGY AND MINERALOGY.

211. Geology.—Scott's *Introduction to Geology*. In the first part of the course the principles of Dynamical Geology, the forces which have modified and are still modifying the earth, are considered. The results of these forces are seen and studied in the structure of the earth and in the phenomena of volcanoes, earthquakes, faults and folds, crust movements, etc. In the latter part of the course the life history of the earth as recorded in the rocks is studied. Special attention is given to the commonly occurring rocks and ores, and the main features of the geology of North Carolina form an integral part of the course. The text is supplemented by lectures. Two periods. Required of Seniors in Civil Engineering, in Mining, and in Chemistry. Dr. WALKER.

212. Mineralogy.—Moses & Parsons' *Mineralogy*. Descriptive and determinative mineralogy; blowpipe analysis and the study of the more important minerals, their properties, uses, and methods of determination. Recitations and laboratory practice. Four periods, first term. Required of Seniors in Mining. Dr. WALKER.

COURSES IN INDUSTRIAL CHEMISTRY.

In harmony with the general purposes for which the College was founded, the course in chemistry is arranged to prepare young men for careers in the analytical or the operating departments of the various chemical industries. To this end the training given in general, organic, and analytical chemistry is supplemented by instruction in technical chemical analysis and in the applied chemical subjects bearing more directly on the course the student has selected. The fundamental principles of engineering, machinery, etc., which are almost indispensable to the successful management of chemical plants, are taught, together with the cultural studies included in the other courses.

Raleigh as a Chemical Center.

There are in the city of Raleigh and its vicinity several manufacturing plants to which, through the courtesy of the owners, the students in chemistry, in company with the teaching staff of the department, make visits each year. These include plants for the manufacture of illuminating gas, sulphuric acid, fertilizers, and ice; for the extraction of cotton-seed oil; and for the dyeing of cotton goods.

The chemical laboratories of the North Carolina Department of Agriculture and of the North Carolina Agricultural Experiment Station are located in Raleigh, and through the courtesy of the officials in charge of these departments our students are welcomed whenever they desire to visit them.

The State Museum is open to the public each day, and among other things contains a very excellent collection of the State's minerals, ores, and building stones.

Chemical Equipment.

The laboratories of general and of analytical chemistry are located in the main building of the College, and are well furnished. The tables are of yellow heart-pine, with oak tops. Each student is provided with water, gas, all necessary re-agents, ample working space, together with lockers for the storage of apparatus, etc. The quantitative laboratory is located on the first floor and will accommodate thirty-two students. The laboratory for introductory chemical work is in the basement and will accommodate one hundred and eighteen students.

The chemical library is well supplied with reference books. It receives the leading chemical journals and owns complete sets of many of the most important of them.

Graduates in Chemistry.

The chemical graduates of the College are engaged in the following lines of chemical work: Manufacture of illuminating gas, manufacture of sulphuric acid, manufacture of fertilizers, manufacture of tobacco products, refining and testing oils, metallurgy of iron, metallurgy of copper, dyeing of cotton goods, in agricultural experiment stations, in State departments of agriculture, and in teaching chemistry. These are employed in North Carolina and nine other States.

COURSES IN DYEING.

As the textile industries of the State increase, the need of young men who have been trained in the principles as well as the practice of the different factory operations becomes apparent. In the course in dyeing the student is taught the different practical methods of the dye-house; the chemistry of the dye-stuffs, some of each class of which he actually makes; the chemical changes brought about by mordants, assistants, etc. He also learns color matching, dye testing, and the methods for the analysis of the different chemicals used in the dye-house. He carries on the study of carding, spinning, weaving, designing, cloth analysis, etc., to the end of the Sophomore year, with the other textile students, and with them devotes attention to shop-work, drawing, engines, boilers, etc., together with the general studies of English, history, mathematics, physics and general chemistry, which are required in all the Four-year Courses.

VII. The Four-year Course in Dyeing, leading to the degree of Bachelor of Science.

Freshman Year.

CHEMISTRY.

216. Inorganic Chemistry.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS, Mr. BAGLEY, and Mr. HARPER.

217. Inorganic Chemistry.—Laboratory work. Remsen and Randall's *Chemical Experiments*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. WILSON.

218. Organic Chemistry.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Two periods. Required of Juniors in Chemistry. Professor WITHERS.

220. Analytical Chemistry.—Treadwell's *Qualitative Analysis*. A discussion of the principles involved in chemical analysis, together with laboratory work. The student is taught to detect the presence of the common metallic elements, as well as that of the acids, in unknown substances. Nine periods, first term. Required of Juniors in Chemistry and Dyeing. Dr. WALKER.

226. Analytical Chemistry.—Treadwell's *Quantitative Analysis*. Gravimetric and volumetric analysis, special attention being given to the analysis of substances of technical importance. Nine periods, second and third terms. Required of Juniors in Chemistry and Dyeing. Nine periods, first term. Required of Seniors in Chemistry and Dyeing. Dr. WALKER.

228. Synthetical Chemistry.—Laboratory work. Gattermann's *Practical Methods of Organic Chemistry*, translated by Shober. The typical transformations and syntheses of the aliphatic and aromatic groups are taken up. The student thus becomes familiar with the reactions and properties of the more important organic compounds. One of each of the more important classes of dye-stuffs is prepared and the properties studied. Nine periods, second and third terms. Required of Seniors in Chemistry and Dyeing. Dr. WALKER.

232. Agricultural Chemistry.—Ingle's *Agricultural Chemistry*. A study of the facts obtained by the application of chemistry and chemical methods of investigation to agriculture. The laws of plant and animal nutrition, the economical feeding of plants and animals, and the maintenance of the fertility of the soil are considered from the

chemical standpoint. Two periods. Required of Juniors in Chemistry. Professor WITHERS.

233. Industrial Chemistry.—Thorpe's *Outlines of Industrial Chemistry*. A discussion of the processes and principles involved in the more important chemical industries. A discussion of the materials of engineering. Two periods. Required of Seniors in Chemistry and Dyeing. Professor WITHERS.

BACTERIOLOGY.

251. General Bacteriology.—Lectures and laboratory work on the nature, physiology, morphology, and economy of bacteria, with especial reference to home sanitation, disinfection, and to the relation of bacteria to disease in plants and animals. The student becomes familiar in the laboratory with methods of culture and investigation in bacteriology. Two periods. Required of Juniors in Chemistry. Professor STEVENS and Mr. TEMPLE.

252. Bacteriology, Advanced.—A course designed to perfect the technique in bacteriology for those who desire to do original work in bacteriology. Work may be elected in sewage bacteriology, dairy bacteriology, bacterial plant diseases, bacteriology of manure, water, soil, or air. The course is flexible and will be made flexible to fit the requirements of those students taking it. Two periods. Required of Seniors in Chemistry. Professor STEVENS.

ENGLISH.

271. English Composition.—A drill on the forms of the language, the correct relation of words, the sentence, the paragraph. Daily written exercises. Three periods. Required of first-year students. Dr. SUMMEY and Mr. MASON.

272. Introductory Composition and Rhetoric.—This course in the fundamentals of Rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill upon grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods a week. Required of Freshmen. Professor HILL, Doctor SUMMEY, and Mr. MASON.

273. Rhetoric, Criticisms, Essays.—The student is taught the essentials of a good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Three periods, first term. Professor HILL, Doctor SUMMEY, and Mr. MASON.

274. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of many exercises. Required of Seniors. Two periods, third term. Professor HILL.

275. American Literature.—By means of an introductory text and by much reading, students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Three periods, second and third terms. Required of Sophomores. Professor HILL, Doctor SUMMEY, and Mr. MASON.

276. English Literature.—The development of English Literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two periods, third term. Required of Juniors. Two periods, first and second terms. Required of all Seniors. Professor HILL.

HISTORY.

281. American History.—By means of a text-book, supplemented by lectures and frequent assignment of topics for special study, students are in this course familiarized with the leading facts in the history of the United States. Two periods. Required of first-year students. Doctor SUMMEY and Mr. MASON.

283. English History.—The first term of the Junior year is devoted to a study of English history. The text is supplemented by lectures on important periods. Two periods, first and second terms. Required of Juniors. Professor HILL.

BUSINESS LAW AND CIVICS.

295. Business Law.—This course includes such subjects as contracts, agency, sales, negotiable paper, insurance, patent rights, etc. The purpose of the course is to teach the general principles of business law. Text-book: Parson's *Laws of Business*. One period, first half year. Required of Juniors. President WINSTON.

296. Civics.—This course includes instruction in the rights and duties of citizenship, with special reference to the Laws of North Carolina. One period, second half year. Required of Juniors. President WINSTON.

POLITICAL ECONOMY AND GOVERNMENT.

297. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The

leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. Required of Seniors. Two periods. President WINSTON.

298. Government.—The Constitutional History of the United States and North Carolina; relations between the State and Federal governments, etc. Lectures and texts. Required of Seniors. Two periods. President WINSTON.

MILITARY SCIENCE.

299. Drill.—Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours. Required of all classes except Seniors. Commandant and Officers of the Battalion.

300. Tactics.—Theoretical instruction in Infantry Drill. Field Service, Army Regulations, and Guard Duty. One period. Required of Juniors. Lieutenant HEATON.

TEXTILE COURSES.

VIII. The Four-year Course in Textile Industry.

VIIIa. The Two-year Course in Textile Industry.

VIIIb. Special Ten-weeks Course in Carding and Spinning.

VIIIc. Special Ten-weeks Course in Weaving and Designing.

THE TEXTILE DEPARTMENT.

The Textile Department is located in a new building recently erected for its use. The instruction given in this department is in the theory and practice of cotton manufacturing. The building, which is a typical cotton mill, is fully equipped with all the necessary machinery for manufacturing cotton yarns and fabrics from the bale to the finished product. The student is taught the theory of cotton spinning, weaving, designing, and dyeing. In connection with the theory, he learns the practical operation of the cotton machinery used in carrying on the different processes. Further, he learns such essential practical details as enable him to adjust and fix the machinery so as to produce the proper results. As a result of this training, each student produces for himself cotton yarns of different numbers, cotton fabrics of different kinds from his own designs and choice of colors.

TEXTILE INSTRUCTION.

In this department three courses of instruction are offered, the Four-year Course leading to the degree of Bachelor of Engineering, the Two-year Course and the Ten-weeks Winter Course in carding and spinning, weaving, and designing.

Four-year Course.

The Four-year Course offers complete facilities for full instruction in all branches of cotton-mill work. Practical training in textile work begins in the Freshman year and forms a part of the work in each of the following years. The combination of practical with theoretical training is begun in the Sophomore year and continues in the Junior and Senior years. The theoretical work is directly related to the practical work going on, and this combination offers the best means for studying cotton-mill work and its operations.

Two-year Course.

The Two-year Course is offered to mature students who cannot spend the time required for the Four-year Course, or who have had considerable practical experience in the mill and wish to avail themselves of our facilities for giving special instruction in textile work. Students twenty years of age or over are admitted to this course without any examination.

Special Ten-weeks Courses.

Special Ten-weeks Courses are offered to practical mill men in carding and spinning, weaving and designing. These courses are given during the winter of each year, beginning with the opening of College in January and lasting until the middle of March. They aim to meet a demand from cotton-mill superintendents, overseers, and practical men for special instruction in the subjects named.

The textile instruction given is of a practical nature and covers the entire ground of cotton manufacturing. Its object is to prepare the student for a useful career in this industry. There is a demand from the mills in this and other States for young men technically trained in the manufacture of cotton goods, especially of the finer grades. That the graduates are meeting with success in this industry is shown by the positions held by them. Among these are president, secretary and treasurer, manager, superintendent, designer, overseer of weaving, mill architect, machinery salesman. In fact, the graduates have gone into almost every branch of cotton manufacturing and have met with success. All have received the same training. The point to which each has advanced has depended upon the ability to deal with the general problems of manufacturing.

TEXTILE BUILDING AND EQUIPMENT.

The Textile Building is located on the west campus, just beyond the Horticultural Building. It is a two-story brick building 125 x 75 feet, with a basement. Throughout, its construction is similar to a cotton mill, being an illustration of standard construction in this class of buildings. The basement is fitted up with a laboratory and classroom for instruction in dyeing and with dyeing machinery. On the first floor are located the hand and power looms and the necessary warp-preparation machinery. The carding and spinning machinery is located on the second floor. Electricity is used as motive power, the machinery of each department in the building being driven by a separate motor. The machinery equipment consists of the latest types of cotton-mill machinery manufactured by American builders. The following is a list of the machines and their makers:

Carding Department.

Opening-room.—One combination opener and breaker lapper, made by Kitson Machine Co., Lowell, Mass. One 40-inch single beater finisher lapper, with patent carding beater, made by Kitson Machine Co., Lowell, Mass.

Carding-room.—One 40-inch revolving flat card, 112 flats, with coiler, made by Mason Machine Works, Taunton, Mass. One 40-inch revolving flat card, 110 flats, with coiler, made by Whitin Machine Works, Whitinsville, Mass. One 40-inch revolving flat card, 110 flats, with coiler, made by Saco and Pettie Machine Shops, Newton Upper Falls, Mass. One single railway head, with coiler, leather rolls, made by Whitin Machine Works, Whitinsville, Mass. One drawing frame, four deliveries, leather rolls, made by Whitin Machine Works, Whitinsville, Mass. One railway head, with coiler, metallic rolls, and improved evener motion, made by Saco and Pettie Machine Shops, Newton Upper Falls, Mass. One drawing frame, four deliveries, metallic rolls, made by Saco and Pettie Machine Shops, Newton Upper Falls, Mass. One sliver lap machine, one ribbon lap machine and one six-head combing machine, made by Whitin Machine Works, Whitinsville, Mass. One 36-spindle slubber for 11 x 5½-inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I. One 48-spindle intermediate roving frame for 9 x 4½-inch bobbin, made by Saco and Pettie Machine Shops, Biddeford, Me. One 64-spindle fine roving frame for 7 x 3½-inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I. One 80-spindle jack roving frame for 6 x 2½-inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I.

Spinning Department.

Spinning-room.—One 64-spindle spinning frame for warp; one 80-spindle spinning frame for filling, made by Whitin Machine Works, Whitinsville, Mass. One 80-spindle spinning frame for warp, one 80-spindle spinning frame for filling, made by Mason Machine Works, Taunton, Mass. One 80-spindle spinning frame for warp, one 80-spindle spinning frame for filling, made by Fales & Jenks Machine Co., Pawtucket, R. I. One 64-spindle spinning frame for warp, one 64-spindle spinning frame for filling, made by Saco and Pettie Machine Shops, Biddeford, Me. One 240-spindle mule spinning frame, 1½-inch gauge, made by Asa Lees & Co., Oldham, England.

Spooling, Twisting, and Winding.—One 40-spindle spooler, made by Draper Company, Hopedale, Mass. One 40-spindle spooler, made by

Whitin Machine Works, Whitinsville, Mass. One 32-spindle spooler, made by Easton & Burnham, Pawtucket, R. I. One 48-spindle twister, made by Whitin Machine Works, Whitinsville, Mass. One 72-spindle twister, one-half for wet, one-half for dry twisting, made by Draper Company, Hopedale, Mass. One 48-spindle twister, one-half for wet, one-half for dry twisting, made by Fales & Jenks Machine Co., Pawtucket, R. I. One 50-spindle reel, one-half live, one-half dead spindles, made by D. A. Tompkins Co., Charlotte, N. C. One 40-spindle reel, made by Draper Company, Hopedale, Mass. One 6-spindle universal winding machine, made by Universal Winding Co., Boston, Mass. One section warper, 400 ends, made by Draper Company, Hopedale, Mass.

Weaving Department.

Warp Preparation.—One 12-spindle bobbin winding machine, made by Jacob K. Altemus, Philadelphia, Pa. One beaming machine, made by Lewiston Machine Co., Lewiston, Me. One beaming machine, complete, made by The T. C. Entwistle Co., Lowell, Mass.

Looms.—One Northrop-Draper print-cloth loom; one Northrop-Draper sateen loom; one Northrop-Draper loom with 20-harness dobby, made by Draper Company, Hopedale, Mass. Two high-speed sheeting looms, made by Kilburn & Lincoln, Fall River, Mass. One sheeting loom, one 12-harness dobby loom and one 24-harness dobby loom, made by Whitin Machine Works, Whitinsville, Mass. One print-cloth loom, one 2 x 1 box loom, one 24-harness dobby loom, made by Mason Machine Works, Taunton, Mass. One Crompton 4 x 1 box gingham loom, one Crompton 4 x 1 box loom with 20-harness dobby, one Crompton single-box loom with 400-hook Jacquard machine, one Knowles Gem loom with 4 x 4 box, one Stafford single-box loom with 20-harness dobby, made by Crompton & Knowles Loom Works, Worcester, Mass. One 2 x 1 box loom with 600-hook Jacquard machine, made by Joseph Battles Manufacturing Co., Lawrenceville, Mass. One 4 x 1 box table cover loom with 624-hook Halton Jacquard machine, made by Crompton-Thayer Loom Co., Worcester, Mass. Ten 4 x 4 box hand looms with 30-harness witches, for narrow fabrics. Two 4 x 4 box hand looms with 400-hook and 600-hook Jacquard machines, from Thos. Halton's Sons, Philadelphia, Pa.

Dyeing Department.

The Dyeing Department is located in the basement of the Textile building, and consists of an experimental dyeing laboratory with desk room sufficient for thirty students, a lecture-room, a stock-room, an office, and a room 70 x 50 feet which is fitted up to give instruction in practical dye-house work.

The dyeing laboratory is well fitted up with appropriate work tables, and all the necessary apparatus for doing experimental dyeing, dye-testing, color-matching, the testing of dyed samples to light, acids, and alkalies, etc., as well as carrying out the various chemical operations necessary in dyeing. The dye-house is equipped with the proper dyeing machinery needed in the dyeing of larger quantities of material, and the giving of practical instruction in boiling out, bleaching, dyeing of raw stock, cops, skeins, warps, and piece goods.

The department has a large collection of dyestuffs and color cards. Through the kindness of the various dyestuff dealers and manufacturers the department is regularly supplied with all new dyestuffs and color cards as soon as they are put on the market, thus affording the student ample opportunity to become familiar with the latest methods and products for commercial work. The department is indebted to the following firms for donations of dyestuffs and chemicals:

Wm. J. Matheson & Co., Ltd., N. Y.
Farbenfabriken of Elberfeld Co., N. Y.
H. A. Metz & Co., N. Y. (successors to Victor Koechl & Co.).
Berlin Aniline Works, N. Y.
A. Klipstein & Co., N. Y.
C. Bischoff & Co., N. Y.
Kuttroff, Pickhardt & Co., N. Y.
New York and Boston Dyewood Co., N. Y.
Schoelkoff, Hartford & Hanna Co., Buffalo, N. Y.
F. E. Atteaux & Co., Boston, Mass.
Read, Holliday & Sons, Ltd., N. Y.
Société Anonyme des Matières Colorantes, Paris.
O. S. Janney & Co., Philadelphia.
Geisenheimer & Co., N. Y.
Roessler and Hasslacher Chemical Co., N. Y.
Jas. S. and Thos. Elkington, Philadelphia, Pa.
Arabol Mfg. Co., N. Y.
Kalle & Co., N. Y.
Geigy Aniline and Extract Co., N. Y.

Power and Power Transmission.

One 30-horse-power 3-phase 550-volt motor, made by General Electric Co., for driving carding and spinning machinery.

One 15-horse-power 3-phase 550-volt motor, made by General Electric Co., for driving weaving machinery.

Pulleys, shaftings, hangers, and couplings, made by Jones & Laughlins, Ltd., Pittsburg, Pa.

Belting, made by Faerweather & Ladew, New York City, and Maloney-Bennett Belting Co., Chicago, Ill.

Heating Plant.

Steam Coils and Blowing Fan, made by B. F. Sturtevant Co., Boston, Mass.

VIII. The Four-year Course in Textile Industry, leading to the degree of Bachelor of Engineering.

Description of Subjects.

301. Carding and Spinning.—Lectures and recitations: practice in operating card and spinning-room machinery. Cotton: classifying the plant, its growth; varieties: ginning; baling and marketing the raw staple. Cotton at the mill: selecting and mixing. Openers and lap-pers: card; sliver lap machines: ribbon lap machines: combers: rail-way-heads: drawing-frames: slubbers: intermediate: speeders: jacks. Ring spinning-frames and mules. Spoolers and warpers. Twisters: reels: cone-winders. Construction and functions of each machine: making the various calculations. Drafts: speed of parts: production. Producing yarns of different counts, single and ply. Testing yarns for breaking strength and elasticity. Required of Freshmen and

Sophomores, Juniors, and Seniors in the Four-year Course and of first and second-year students in the Two-year Course. Professor WILSON and Mr. STEED.

302. Weaving.—Lectures and practice in warp preparation, operating and fixing looms, cloth-finishing machinery. Warp preparation; pin frame warper; section warper; beam warper; construction of beam warper, stop motion, measuring motion, creel; pattern warp making; long and short chain beamers. Slashing; steam cylinder slasher; hot air slasher; construction of slasher; creel; cylinders; immersion roll; squeeze rolls; drying fan; separator rolls; winding yarn on beam; cone drive; slow motion; measuring and cut marking motion. Sizing; construction of size kettle; size mixing and boiling; division of sizing ingredients; values of ingredients; sizing receipts for light, medium, and heavy sizing. Loom-mounting; reels and harnesses; drawing in, and putting warps in loom. Looms; hand looms and power looms; construction of plain loom; principal movements in weaving; let-off and take-up motions; filling stop motion; warp stop motion. Cams and their construction. Magazine looms; construction and advantages. Drop box looms; chain building for box looms; changing boxes to have easy running loom; construction and value of multipliers; timing and fixing box motions. Pick and pick-looms. Box-chain, and multiplier-chain building, arrangement of colors in boxes to give easy running loom. Ball and shoe pick motion. Construction and fixing of head motion. Dobby; single and double action; construction and fixing of dobbie; extra appliances necessary for weaving leno, towel, and other pile fabrics. Value of easers; half-motion; and jumper attachment for leno. Springs and spring-boxes. Pattern chain building. Jacquard, single and double lift; construction and tie up. Weave-room calculations; speed and production calculations; relative speed of looms; counts of cotton harness. Finishing; inspection of cloth; singeing and brushing; calendaring; tentering; folding and packing for the market. Equipment necessary for warp preparation, weaving, finishing; approximate cost of production of fabrics in the different processes. Required of Freshmen, Sophomores, Juniors, and Seniors in the Four-year Course and of first and second-year students in the Short Course. Mr. NELSON.

303. Textile Designing.—Lectures and practice in designing; fabric structure and cloth analysis. Designing; method of representing weaves on design paper. Foundation weaves; plain; twill; satin. Ornamentation of plain weave; color effects on plain weave. Derivative weaves; plain and fancy basket weaves; warp and filling rib weaves. Broken twills; curved twills; corkscrew twills; entwining twills. Granite weaves; satin shading. Combination of weaves;

figured weaving on plain ground. Fancy satin and figured stripes on plain ground. Spots arranged in different orders on plain, twill, satin ground. Imitation leno; honey-comb weaves. Bedford cords and combinations with other weaves. Wave designs; pointed twills; diamond effects. Plain and fancy piqués. Double plain; figured double plain. Double cloths. Cloths backed with warp; cloths backed with filling. Cloths ornamented with extra warp; cloths ornamented with extra filling. Cotton velvet. Corduroy. Matelasse. Leno weaves with one, two, and more sets of doups. Principles of working both top and bottom doups. Combination of plain and fancy weaves with leno. Methods of obtaining leno patterns. Jacquards. Distribution and setting out of figures for geometrical and floral effects. Distributing figures to prevent lines. Areas of patterns. Preparation of sketches. Transfer of sketches to design paper. Painting in the design with different weaves according to sketch. Shading of patterns. Card cutting and lacing. Fabric structure; textile calculations. Determining the number of threads and picks per inch to make a perfect cloth. Calculations to determine the texture in an unequally reeded fabric. Diameter of threads. Balance of cloth. Texture for double cloth. Cloth analysis. Calculating particulars of cloth from data ascertained from samples. Shrinkages. Dents in patterns; patterns in warp. Drafting and pattern chain building. Reed and harness calculations. Calculations to obtain quantities of warp and filling in stripe and check fabrics. To find number of threads per inch, using a given weight of warp; also number of picks per inch, using a given weight of filling. Yarn calculations. System of numbering woolen; worsted; silk; linen, and cotton yarns. Determination of one system of yarn to that of another. Required of Sophomores, Juniors and Seniors in the Four-year Course, and of first and second-year students in the Short Course. Mr. NELSON and Mr. SHUFORD.

304. Mill Calculations.—Calculations for speed of machines and parts. Yarn calculations, draft twist and production on cotton machinery. One period. For Freshmen. Professor WILSON.

306. Dyeing.*—With the microscope and other testing apparatus the student makes a careful study of the various fibers used in the textile industry. He also studies the chemical and physical properties of these fibers; the action of acids, alkalies, heat, moisture, and the various other agencies to which fibers are liable to be subjected. He next takes up the study of the fundamental principles which underlie the acts of bleaching and dyeing, such as the boiling out and

*See also the Four-year course in Dyeing, page 75.

bleaching of cotton, and the chemical reactions involving each step. The adaptability of water for bleaching and dyeing, followed by the theories of dyeing. Substantive dyes and their application to cotton. After-treatment of direct colors, including diazotising and developing and the topping with basic colors. The application to cotton of basic colors, acid colors, mordant colors, including a study of the various mordants and their fixation with metallic salts. Dyeing with sulphur colors, indigo, natural and artificial, aniline black, turkey red, and other insoluble azo colors developed on the fiber. The methods of bleaching and dyeing of linen, jute, ramie, and other vegetable fibers. The scouring and bleaching of wool. The carbonization and chlorination of wool. The application of basic, acid, chrome, eosine, and direct colors to wool. Dyeing wool with logwood, fustic, and other natural dyewoods. Methods of the making and dyeing of artificial silk. The boiling off, bleaching and dyeing of natural silk. Study of the chemical and physical changes which take place during mercerization; also the methods of dyeing mercerized goods. The use of the various kinds of machines used in bleaching and dyeing. The dyeing of raw-stock, skeins, cops, warps, piece goods, hosiery, underwear, and unions. The science of color-mixing. Color-matching on textiles. The use of the tintometer and colorimeter. Calico printing, including the various methods of preparing the various pastes, thickening agents, mordants and assistants used in printing. Quantitative analysis of mixed yarns, and fabrics composed of cotton, wool, and silk. The testing of dyestuffs for their shade, tinctorial power, and leveling properties. Comparative dye trials to determine money value. Testing for mixtures. The reactions of acids, alkalies and reducing agents on several samples taken from the different classes of dyestuffs. The use of hyraldite and other stripping agents.

Fraps' Principles of Dyeing is used as a text in connection with a course of lectures which will include the consideration of many difficult problems that arise in the dye-house. Required of Juniors and Seniors in Textile Industry. Mr. SHUFORD.

307. Dyeing Laboratory.—A series of experiments are performed which cover all the subjects taken up in the lecture course, and includes a large amount of work done in the laboratory and dye-house. Special stress is put on the matching of colors, and the dyeing of sulphur colors. Each student is required to bleach and dye a large number of samples of yarn and cloth on a small scale, and is required to mount specimens of his work in a scrap-book. At the discretion of the instructor in charge, the class bleaches and dyes larger quantities of raw-stock, cloth, and yarn in the dye-house, as well as the printing of samples on the laboratory printing machine. This work

will be supplemented by visits to the mills which do dyeing in the city of Raleigh. Required of Juniors and Seniors in Textile Industry. Mr. SHUFORD.

CHEMISTRY.*

311. Inorganic Chemistry.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS, Mr. BAGLEY, and Mr. HARPER.

312. Inorganic Chemistry.—Laboratory work. Remsen and Randall's *Chemical Experiments*. The student performs, under the eye of the instructor, experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. WILSON.

MECHANICAL ENGINEERING.†

316. Free-hand Drawing.—Work in the use of the pencil: technical sketches of objects, usually parts of a machine. Two periods, first term. Required of Freshmen and first-year students. Mr. ST. AMANT.

317. Elementary Mechanical Drawing.—Use of instruments; geometric drawing; isometric and cabinet drawing; elementary projections; drawings made to scale from working sketches of pieces of a machine. Two periods, second term. Required of Freshmen and first-year students. Mr. ST. AMANT.

318. Descriptive Geometry Drawing.—Elementary principles: cylinders, cones, and prisms; intersection development of surfaces, miscellaneous problems. Two periods, third term. Required of Sophomores. Mr. ST. AMANT.

320. Wood-work.—Use of bench tools; working from drawings, lining, sawing, planing; practice in making simple exercises in wood-turning. Two periods. Required of Freshmen. Mr. CLAY and Mr. DEAL.

321. Forge-work.—Exercises in working with iron, welding; uses and care of forge-tools and fires. Two periods. Required of Freshmen. Mr. DEAL.

324. Machine-shop Work.—Bench and machine-work. Exercises in chipping and filing. Exercises in lathe-work, boring, reaming, drilling, planing, milling, and shaper work. Two periods. Required of Textile Juniors. Mr. PARK.

*For further information, see course in Chemistry.

†For full information, see course in Mechanical Engineering.

326. Boilers.—Steam generation; types, care and management; fittings and appliances; corrosion and incrustation; combustion of fuel; boiler power. Two periods, first term. Required of Seniors. Professor THOMAS.

327. Steam-engines.—Types—simple and compound and triple expansion, automatic, Corliss, rotary. Care and management. Indicators, indicated and brake horse-power, condensers. Two periods, second term. Required of Seniors. Professor THOMAS.

328. Valve Gears.—Plain slide valve, balanced valves, Corliss and other form valve gears. Link and radial reversing gears. Shaft governors. Bilgram and Zenner valve diagrams. Two periods, third term. Required of Seniors. Professor THOMAS.

PHYSICS.*

331. Elementary Physics.—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Two periods. Required of Freshmen. Mr. SPRAGUE.

MATHEMATICS.†

334. Arithmetic.—Milne's *Standard Arithmetic*. Begin with decimal fractions and complete the subject. Five periods, first term. Required of first-year students. Mr. MANN, Mr. LANG, and Mr. J. A. PARK.

335. Algebra.—Wells' *Higher Algebra*, up to quadratic equations. Five periods, second and third terms. Required of first-year students. Mr. MANN, Mr. LANG, and Mr. J. A. PARK.

336. Advanced Algebra.—Begins at quadratic equations; general theory of equations; solution of higher equations, etc. Wells' *Higher Algebra*. Five periods, first term. Required of Freshmen. Mr. YATES and Mr. J. A. PARK.

337. Geometry.—Plane and solid. Wentworth's *Plane and Solid Geometry*. Five periods, second and third terms. Required of Freshmen. Five periods, first term. Required of Sophomores. Mr. YATES and Mr. J. A. PARK.

338. Trigonometry.—Five periods, second and third terms. Required of Sophomores. Mr. YATES.

*For full information, see course in Electrical Engineering.

†For full information, see course in Civil Engineering.

ENGLISH.

341. Introductory Composition and Rhetoric.—This course in the fundamentals of Rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill upon grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods a week. Required of Freshmen. Professor HILL, Doctor SUMMEY, and Mr. MASON.

342. Rhetoric, Criticisms, Essays.—The student is taught the essentials of good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Three periods, second term. Professor HILL, Doctor SUMMEY, and Mr. MASON.

343. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of many exercises. Required of Seniors. Two periods, third term. Professor HILL.

344. American Literature.—By means of an introductory text and by much reading, students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Three periods, second and third terms. Required of Sophomores. Professor HILL, Doctor SUMMEY, and Mr. MASON.

345. English Literature.—The development of English Literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two periods, third term. Required of Juniors. Two periods, first and second terms. Required of Seniors. Professor HILL.

347. English History.—The first term of the Junior year is devoted to a study of English history. The text is supplemented by lectures on important periods. Two periods, first and second terms. Required of all Juniors. Professor HILL.

BUSINESS LAW AND CIVICS.

348. Business Law.—Parson's *Laws of Business*. This course includes such subjects as contracts, agency, sales, negotiable paper, insurance, patent rights, etc. The purpose of the course is to teach the general principles of business law. Text-book: Parson's *Laws of Business*. One period, first half year. Required of Juniors. President WINSTON.

349. Civics.—This course includes instruction in the rights and duties of citizenship, with special reference to the Laws of North Carolina. One period, second half year. Required of Juniors. President WINSTON.

POLITICAL ECONOMY AND GOVERNMENT.

351. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. Two periods, first half year. Required of Seniors. President WINSTON.

352. Government.—The Constitutional history of the United States and North Carolina; relations between the State and Federal governments, etc. Lectures and texts. Two periods, second half year. Required of Seniors. President WINSTON.

MILITARY SCIENCE.

359. Drill.—Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours first term, two periods second and third terms. Required of all classes except Seniors. Commandant and Officers of the Battalion.

360. Tactics.—Theoretical instruction in Infantry Drill, Field Service, Army Regulations, Guard Duty, and Target Practice. One period. Required of Juniors. Lieutenant HEATON.

NORMAL COURSES.

I. For Rural Teachers:

- (a) **Two-year Course.**
- (b) **One-year Course.**
- (c) **Summer Course.**

II. For City Teachers:

- (a) **Two-year Course.**
- (b) **One-year Course.**
- (c) **Summer Course.**

The Normal Courses are intended for the education of teachers, both men and women, chiefly along industrial lines. Industrial education is being introduced into our public schools, and the College has a constant demand for well-trained industrial teachers. It is hoped by means of the Normal Courses to help supply this demand. Our School Law already requires agriculture to be taught in the public schools, and manual work will doubtless be added.

The Courses for Rural Teachers are devoted largely to agriculture and nature study; the Courses for City Teachers, to drawing and manual training. Each of these courses also includes a review of other public-school studies.

Persons already engaged in teaching may, at slight expense of time and money, by means of the short courses or the Summer Courses, make themselves proficient in one or more industrial lines. Persons preparing to teach may take the full courses, and thus become proficient not only along industrial lines, but also in the other public-school branches and in one or more sciences, or in higher mathematics and English. The industrial training given is both practical and theoretical, and is arranged with reference to the present needs of the public schools in North Carolina. The exercises in the Normal Courses are the same as in the other courses of the colleges, except in the Summer Courses.

The Normal Courses are as follows:

I. Courses for Rural Teachers.

(a) TWO-YEAR COURSE.

First Year.

SUBJECTS.	PERIODS A WEEK.		
	1st Term.	2d Term.	3d Term.
Agriculture -----	3	3	3
Nature Study { Plants -----	3	3	3
{ Animals -----	3	3	3
English -----	3	3	3
Mathematics -----	5	5	5
Military Drill -----	3	2	2

Second Year.

Farm Equipment -----	4	--	--
Soils -----	--	4	--
Crops -----	--	--	4
Plant Diseases -----	3	--	--
Physics -----	--	3	--
Botany -----	--	--	3
Mathematics -----	4	4	4
English -----	3	3	3
Drawing -----	2	2	2
History -----	2	2	2
Military Drill -----	3	2	2

(b) ONE-YEAR COURSE.

SUBJECTS.	PERIODS A WEEK.		
	1st Term.	2d Term.	3d Term.
Agriculture-----	3	3	3
Farm Equipment, Soils, and Crops -----	4	4	4
Nature Study-----	3	3	3
Mathematics-----	4	4	4
English-----	3	3	3
Military Drill -----	3	3	3

II. Courses for City Teachers.

(d) TWO-YEAR COURSE.

First Year.

Drawing-----	2	2	2
Wood-work -----	1	1	1
Forge-work -----	1	1	1
Mechanical Technology-----	1	1	1
Algebra and Geometry-----	5	5	5
English-----	3	3	3
History-----	2	2	2
Drill-----	3	3	3

Elective, 3 periods required: Physics 2, Nature Study (Plants) 3, Nature Study (Animals) 3.

Second Year.

SUBJECTS.	PERIODS A WEEK.		
	1st Term.	2d Term.	3d Term.
Drawing -----	2	2	2
Wood-work -----	4	4	4
Forge-work -----	1	1	1
English -----	2	2	2
Architecture and Descriptive Geometry -----	2	2	2
Architectural Drawing -----	2	2	2
Geometry and Trigonometry -----	4	4	4
Military Drill -----	3	2	2
Elective, at least 2 periods required: Chemistry 3, Chemical Laboratory 2, Electricity and Magnetism 2, Descriptive Geometry 2, Plant Diseases, Human Physiology, Physiological Botany 3.			

(b) ONE-YEAR COURSE.

Drawing -----	3	4	4
Wood-work -----	4	5	5
Forge-work -----	2	2	2
Architecture -----	2	--	--
Architectural Drawing -----	2	2	2
Algebra and Geometry -----	5	5	5
Military Drill -----	3	2	2
Elective: Physics 2, English (132) 3, English (133 and 135) 2, History 2, Nature Study (Plants) 3, Nature Study (Animals) 3, Chemistry 3, Chemical Laboratory 2, Electricity and Magnetism 2, Plant Diseases 3, Human Physiology 3, Physiological Botany 3, Geometry and Trigonometry 4, Descriptive Geometry 2.			

DONATIONS.

The College makes thankful acknowledgment of the receipt of the following gifts during the year:

To the Textile Department.

Whitin Machine Works, Whitinsville, Mass.—Part value on 24-harness dobby loom; supplies for spinning and weaving machinery; part value on one set combing machinery; one sliver lap machine; one ribbon lap machine; one six-head combing machine.

Wm. Firth Co., Boston, Mass.—Part value on one 240-spindle mule. *Asa Lees & Co., makers, Oldham, Eng.*

Thomas Halton's Sons, Philadelphia, Pa.—One 400-hook Jacquard machine with harness; one 600-hook Jacquard machine with harness; one 624-hook table cover Jacquard machine with harness.

Crompton-Thayer Loom Co., Worcester, Mass.—Part value on one table-cover loom.

New England Butt Co., Providence, R. I.—Two braiding machines.

Berlin Aniline Works, N. Y.—Samples of dyestuff and color cards.

Continental Color and Chemical Co., N. Y.—Color cards.

H. A. Metz & Co., N. Y.—Samples of dyestuffs and color cards.

Kalle & Co., N. Y.—Five pounds Acme size; samples of dyestuffs; color cards.

Jas. S. and Thos. Elkington, Philadelphia, Pa.—Twenty pounds of bleachers' soap.

C. Bischoff & Co., N. Y.—Samples of dyestuffs and color cards.

Arabol Mfg. Co., N. Y.—Five pounds British gum, three pounds tragacanth, and one pound blood albumen.

A. Klipstein & Co., N. Y.—Samples of dyestuffs and color cards.

Roessler and Hasslacher Chemical Co., N. Y.—Pluride of sodium.

Cassella Color Co.—Samples of dyestuffs and color cards.

Courtesies Extended to Textile Department.

Textile Excelsior, Charlotte, N. C.

Textile Manufacturers' Journal, New York.

Fiber and Fabric, Boston, Mass.

Manufacturers' Record, Baltimore, Md.

Textile World, Boston, Mass.

Textile American, Boston, Mass.

The Manufacturer, Philadelphia, Pa.

The Tradesman, Chattanooga, Tenn.

American Industries, New York City.

Cotton, Atlanta, Ga.

Dixie, Atlanta, Ga.

American Cotton and Wool Reporter, Boston, Mass.

Mill News, Charlotte, N. C.

Dyers' Bulletin, Philadelphia, Pa.

The Dyer and Calico Printer, London, Eng.

The Chemical Trade Review and Dyers' Trade Journal, Phila., Pa.

Garment Dyers' Guide, Philadelphia, Pa.

Cassella Color Company, New York City.

Pilot Cotton Mills, Raleigh, N. C.

Caraleigh Cotton Mills, Raleigh, N. C.

Raleigh Cotton Mills, Raleigh, N. C.

To the Chemistry Department.

The Imperial Brush Company, Newark, N. J.—One scrubbing brush.

R. G. Mewborne, Louisville, Ky.—Sample of pure nicotine, and

Bolton's Bibliography of Chemistry, with two supplements.

Sulphur Mining and Railroad Company, Richmond, Va., through J. W. White.—Samples of the different ores from the mine.

CATALOGUE OF STUDENTS.

GRADUATES.

<i>Name.</i>	<i>Post-office.</i>	<i>Course.</i>
OSCAR LUTHER BAGLEY, B. S.,	Bagley,	Chem.
RICHARD HUGH HARPER, B. S.,	Patterson,	Chem.
WILLIAM KERR, B. S.,	Bryson City,	Agr.
JAMES OSCAR MORGAN,	Etowah,	Agr.
JOHN ALSEY PARK,	Raleigh,	C. E.
JAMES CLARENCE TEMPLE, B. S.,	Sanford,	Agr.

SENIOR CLASS.

DURANT STEWART ABERNETHY,	Hickory,	C. E.
GEORGE GILDEROY ALLEN,	Hiddenite,	Tex.
GEORGE PAGE ASBURY,	Burkmont,	C. E.
JAMES CLAUDIUS BEAVERS,	Morrisville,	Agr.
NEDHAM ERIC BELL,	Kinston,	Chem.
KENNETH LEON BLACK,	Mount Mourne,	C. E.
WILLIAM FRANCIS BROCK,	Farmington,	C. E.
WILLIAM ANDREWS BUYS,	Havelock,	C. E.
MARK HOPKINS CHESBRO.	Claremont, Va.,	Agr.
CONNOR CALHOUN CLARDY,	Concord,	E. E.
DAVID MACKENZIE CLARK,	Weldon,	C. E.
JOHN WASHINGTON CLARK,	Raleigh,	M. E.
JAMES DUNCAN CLARKE, JR.,	Tampa, Fla.,	Chem.
SAMUEL HERBERT CLARKE,	Statesville,	C. E.
WILEY THEODORE CLAY,	Hickory,	M. E.
DUNCAN ARCHIBALD COX,	Rowland,	Chem.
ALEXANDER DOANE CROMARTIE,	Garland,	Agr.
LATTA VANDERION EDWARDS,	Merry Oaks,	C. E.
BENJAMIN BALLARD EGERTON,	Ingleside,	C. E.
WELDON THOMPSON ELLIS,	Spencer,	M. E.
ALBERT EDWARD ESCOTT,	Charlotte,	Tex.
WILLIAM CARLYLE ETHERIDGE,	Manteo,	Agr.
JAMES BECKETT EWART,	Hendersonville,	E. E.
SHIRLY WATSON FOSTER,	Nance,	Agr.
ARTHUR WYNN GREGORY,	Halifax,	Chem.
HORACE LESTER HAMILTON,	Biltmore,	E. E.
JOHN FREDERICK HANSELMAN,	Manson,	M. E.
CLARENCE WILSON HEWLETT,	Wilson,	E. E.

SIXTEENTH ANNUAL COMMENCEMENT.

May 29, 1905.

Degrees Conferred.

BACHELORS OF AGRICULTURE.

LEREY FRANKLIN ABERNETHY,	MALCOLM ROLLAND MCGIRT,
ROBERT JAMES AVERY,	JAMES OSCAR MORGAN,
JOEL WATKINS BULLOCK,	PLEASANT H. POINDEXTER,
WILLIAM FRANKLIN KIRKPATRICK,	ROBERT WALTER SCOTT, JR.

BACHELORS OF ENGINEERING.

In Civil Engineering.

HENRY BROZIER CARTWRIGHT,	HENRY MARVIN LILLY,
JARVIS BENJAMIN HARDING, B.E.,	LINDSLEY ALEXANDER MURR,
JERE ISAAC HERRITAGE,	EDWARD GRIFFITH PORTER, JR.,
ARTHUR TEMPLETON KENYON,	GASTON WILDER ROGERS, B.E.,
STARR NEELY KNOX,	JONATHAN RHODES SMITH,
JAMES HERRITAGE KOONCE,	JOHN DAVIDSON SPINKS,
ARCHIE CARRAWAY WILKINSON.	

In Electrical Engineering.

WILLIAM MILLER CHAMBERS,	ERVIN BLAKENEY STACK,
LLOYD RAINEY HUNT,	SILVESTER MURRAY VIELE,
WALTER JENNINGS WALKER.	

In Mechanical Engineering.

BENJAMIN ALEXANDER BROOM,	GEORGE GREEN LYNCH,
WALTER GOSS FINCH,	JOHN ALSEY PARK,
STERLING GRAYDON,	STEPHEN DOCKERY WALL,

In Textile Industry.

LABAN MILES HOFFMAN, JR.,	WALTER WELLINGTON WATT, JR.
---------------------------	-----------------------------

In Mining Engineering.

LIPSCOMB GOODWIN LYKES.

BACHELORS OF SCIENCE.**In Industrial Chemistry.**

OSCAR LUTHER BAGLEY,
 RICHARD HUGH HARPER,

WALTER HOGE MCINTIRE,
 GARLAND PERRY MYATT,

JAMES HICKS PEIRCE.

Announcement of Honors.**HONORS IN SCHOLARSHIP FOR FOUR YEARS.**

J. RHODES SMITH.

HONORS IN SCHOLARSHIP FOR 1904-5.**Senior Class.**

O. L. BAGLEY,
 J. B. HARDING,
 J. I. HERRITAGE,

G. W. ROGERS,
 J. R. SMITH,
 S. D. WALL.

Junior Class.

M. H. CHESBRO,
 A. E. ESCOTT,

C. W. HEWLETT,
 J. P. LOVILL,

R. MAXWELL.

Sophomore Class.

S. ELDRIDGE,
 C. L. GARNER.

L. R. GILBERT,
 W. B. TRUITT.

Freshman Class.

W. P. ASHCRAFT,
 W. L. BLACK.

R. R. EAGLE,
 M. L. EARGLE.

Short-course Class.

P. L. GAINNEY,

L. G. WINSTEAD.

HONORS FOR PUNCTUALITY.

S. N. KNOX, '05.
 J. H. KOONCE, '05.
 J. E. OVERTON, '07.

N. C. BROOKS, '08.
 W. B. BURGESS, '08.
 H. W. KUEFFNER, '08.

FACULTY.

GEORGE TAYLOE WINSTON, A.M., LL.D., President, and Professor of Political Economy.

DANIEL HARVEY HILL, A.M., Lit.D., Professor of English, and Vice-President.

WILLIAM ALPHONSO WITHERS, A.M., Professor of Chemistry.

WALLACE CARL RIDDICK, A.B., C.E., Professor of Civil Engineering.

FRANK LINCOLN STEVENS, M.S., Ph.D., Professor of Botany and Vegetable Pathology.

CHARLES WALTER THOMAS, M.E., Professor of Mechanical Engineering.

ROBERT E. LEE YATES, A.M., Professor of Mathematics.

THOMAS NELSON, Professor of Textile Industry.

CHARLES M. CONNER, B.S.A., B.S., Professor of Agriculture.

JOHN SOMERVILLE EATON YOUNG, First Lieutenant U. S. A., Professor of Military Science and Tactics.

WILLIAM JAMES MOORE, M.E., Professor of Electrical Engineering and Physics.

GUY ALEXANDER ROBERTS, B.S., D.V.S., Associate Professor of Veterinary Science and Physiology.

JOHN MICHELS, B.S.A., M.S., Associate Professor of Dairying and Animal Husbandry.

FRANK C. REIMER, M.S., Assistant Professor of Horticulture.

BARTHOLOMEW MOORE PARKER, B.S., Assistant Professor of Textile Industry.

ROBERT SETH CURTIS, B.S.A., Assistant Professor of Animal Husbandry.

CHARLES BENJAMIN PARK, Instructor in Machine Shop and Assistant in Power Plant.

WILLIAM ANDERSON SYME, B.S., M.S., Ph.D., Instructor in Chemistry.

CARROLL LAMB MANN, B.S., C.E., Instructor in Civil Engineering.

THOMAS SIMEON LANG, B.S., C.E., Instructor in Civil Engineering.

GEORGE SUMMEY, JR., Ph.D., Instructor in English.

WINFRED MORSE ADAMS, B.S., Instructor in Electrical Engineering.

JOHN HOUSTON SHUFORD, B.S., Instructor in Dyeing.

CLARENCE ANDREW SPRAGUE, B.S., Instructor in Physics.

ALFRED HENRY THIESSEN, B.S., Section Director United States Weather Bureau, Instructor in Meteorology.

JOHN STRAUCHON JEFFREY, Instructor in Poultry Husbandry.

ABRAHAM RUDY, A.M., Pd.D., Instructor in Modern Languages.

RALPH INGRAM SMITH, B.S., Instructor in Zoology and Entomology.

WILEY THEODORE CLAY, B.E., Instructor in Wood-working and Pattern-making.

JOHN ALSEY PARK, B.E., Instructor in Mathematics.

MICHAEL RALPH RICHARDSON, A.M., Instructor in Mathematics.

LILLIAN LEE VAUGHAN, B.E., Instructor in Drawing and Mechanics.

CARL PHILIP BONN, B.A., Instructor in English.

CLARENCE WILSON HEWLETT, B.S., Instructor in Physics.

VANCE SYKES, B.E., Instructor in Mathematics and Civil Engineering.

WELDON THOMPSON ELLIS, B.E., Instructor in Machine Design and Steam Laboratory.

LEON FRANKLIN WILLIAMS, A.B., A.M., Ph.D., Instructor in Chemistry.

HERBERT NATHANIEL STEED, Instructor in Weaving and Designing.

JAMES CLARENCE TEMPLE, B.Agr., Instructor in Bacteriology.

ARTHUR JOHN WILSON, B.S., Instructor in Chemistry.

FRED. BARNET WHEELER, Instructor in Forge.

THOMAS DOTTERER EASON, B.S., Laboratory Assistant in Botany.

OTHER OFFICERS.

EDWIN BENTLEY OWEN, B.S., Registrar.

ARTHUR FINN BOWEN, Bursar.

BENJAMIN SMITH SKINNER, Farm Superintendent.

JAMES OLIVER LOFTIN, Steward.

Miss ELSIE LANIER STOCKARD, Librarian.

Mrs. DAISY LEWIS, Matron.

Miss KATHARINE FORT, Stenographer.

HENRY McKEE TUCKER, M.D., Physician.

NORTH CAROLINA AGRICULTURAL EXPERIMENT STATION.

GEORGE TAYLOE WINSTON, A.M., LL.D., President.
CHARLES BURGESS WILLIAMS, M.S., Director and Agronomist.
WILLIAM ALPHONSO WITHERS, A.M., Chemist.
FRANK LINCOLN STEVENS, Ph.D., Vegetable Pathologist.
CHARLES M. CONNER, B.S.A., B.S., Agronomist.
JOHN STRAUCHON JEFFREY, Poultryman.
FRANK CHARLES REIMER, M.S., Horticulturist.
ROBERT SETH CURTIS, B.S.A., Animal Husbandman.
JOHN MICHELS, M.S.A., Dairy Husbandman.
RALPH INGRAM SMITH, B.S., Entomologist.
WILLIAM KERR, B.Agr., Assistant in Field Experiments.
WILLIAM ANDERSON SYME, B.S., M.S., Ph.D., Assistant Chemist.
JOHN GALENTINE HALL, A.M., Assistant in Vegetable Pathology.
WILLIAM CARLYLE ETHERIDGE, B.Agr., Assistant in Farm Crops.
JAMES CLARENCE TEMPLE, B.Agr., Assistant Chemist and Assistant Bacteriologist.
ARTHUR FINN BOWEN, Bursar.
Miss MARY ELIZABETH DEW, Stenographer.

MILITARY ORGANIZATION.**Commandant of Cadets.**

FIRST LIEUTENANT JOHN S. E. YOUNG, U. S. Army.

Cadet Major.

R. R. EAGLE.

Battalion Staff.

J. L. VON GLAHN, Captain and Adjutant.

S. M. GIBBS, Captain and Quartermaster.

Non-Commissioned Staff.

H. N. SUMNER, Sergeant-Major.

W. F. MORRIS, Color Sergeant.

Band.

J. F. ZIGLAR, Captain.

R. R. FAISON, Drum-Major.

T. F. HAYWOOD, First Sergeant.

J. E. TOOMER, Sergeant.

I. N. TULL, Corporal.

J. S. BRAY, Corporal.

Company A.

D. LINDSAY, Captain.
T. M. POYNER, First Lieutenant.
W. B. BURGESS, Second Lieutenant.
G. HARRISON, First Sergeant.
W. M. MILNER, Sergeant.
J. B. CRAVEN, Sergeant.
A. H. GREEN, Sergeant.
J. S. WHITEHURST, Sergeant.
J. C. ALBRIGHT, Corporal.
C. G. ARMFIELD, Corporal.
W. P. HARDEE, Corporal.
C. W. HINSHAW, Corporal.
W. L. MANNING, Corporal.
H. P. MOSELEY, Corporal.
M. S. MAYES, Corporal.

Company B.

A. G. BOYNTON, Captain.
H. A. POWELL, First Lieutenant.
L. L. PITTMAN, Second Lieutenant.
J. W. HARRELSON, First Sergeant.
T. M. CLARK, Sergeant.
J. M. PARKER, Sergeant.
H. S. STEELE, Sergeant.
G. G. SIMPSON, Sergeant.
D. C. YOUNG, Corporal.
J. F. ROBINSON, Corporal.
T. D. HARRIS, Corporal.
T. B. SUMMERLIN, Corporal.
E. E. BUCK, Corporal.

Company C.

D. Y. HAGAN, Captain.
F. H. BROWN, First Lieutenant.
J. C. WILLIAMS, Second Lieutenant.
C. P. GRAY, First Sergeant.
J. G. PASCHAL, Sergeant.
S. F. STEPHENS, Sergeant.
W. A. HORNADAY, Sergeant.
J. E. LATHAM, Sergeant.

W. N. SLOAN, Sergeant.
R. L. HOLDER, Corporal.
L. L. HOOD, Corporal.
E. H. LEE, JR., Corporal.
F. N. McDOWELL, Corporal.
L. P. McLENDON, Corporal.
J. L. SPRINGS, Corporal.
R. T. BOYLAN, Corporal.

Company D.

E. E. SMITH, Captain.
M. L. EARGLE, First Lieutenant.
P. L. GAINES, Second Lieutenant.
R. A. SHOPE, First Sergeant.
B. F. MONTAGUE, Sergeant.
F. A. DUKE, Sergeant.
S. M. MALLISON, Sergeant.
M. H. TERRELL, Sergeant.
L. D. MOODY, Corporal.
J. B. PARKS, Corporal.
H. C. CLAY, Corporal.
S. H. McNEELY, Corporal.
V. P. BYRUM, Corporal.

Company E.

C. T. MARSH, Captain.
B. T. FERGUSON, First Lieutenant.
H. W. KUEFFNER, Second Lieutenant.
J. M. PRICE, First Sergeant.
W. S. DEAN, Sergeant.
F. L. FOARD, Sergeant.
F. J. JONES, Sergeant.
J. R. SUGG, Corporal.
W. R. PHILLIPS, Corporal.
J. W. IVEY, Corporal.
R. L. MORGAN, Corporal.
C. R. JORDAN, Corporal.
J. M. COUNCIL, Corporal.

NOTE.—On October 16, 1907, the Battalion held a competitive drill on the Fair Grounds track, during Fair Week. Company A was selected as the best drilled organization and awarded the College pennant.

GENERAL INFORMATION.

The North Carolina College of Agriculture and Mechanic Arts owes its existence to the combined liberality of the United States Government and of R. S. Pullen, of Raleigh, together with the patriotic efforts of a few far-sighted men who saw that in the industrial life of North Carolina the time had come when trained and educated leaders were necessary. The first act of the General Assembly of this State in relation to the College was ratified in 1885, the bill, which afterwards became a law, having been introduced by A. Leazar, Esq. The Congress of the United States in 1862 passed a bill, introduced by Senator Justin S. Morrill, of Vermont, giving to each State public lands "for the endowment, support, and maintenance of at least one college, whose leading object shall be, without excluding other scientific and classical studies and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life."

The income from this grant, amounting to \$7,500 annually, was appropriated in 1887 by the Legislature of the State for the establishment and yearly maintenance of this College. Sufficient land for the College site and farm was given by the late R. S. Pullen. The College was formally opened for students October 1, 1889.

Additional funds were provided afterwards by the National Congress by the "supplemental Morrill Act" of 1890, and the "Nelson Act" of 1907.

The College is beautifully located on the extension of Hillsboro Street in the western suburbs of Raleigh, a mile and a quarter from the State Capitol. The site is suitable in all respects.

There is an abundant supply of water from twelve deep wells. The water is analyzed, both chemically and bacteriologically, at regular periods.

The College now owns six hundred and eighty-five acres of land and sixteen buildings, and its teaching force consists of forty-two specialists. Its laboratories, drawing-rooms, and work-shops are well equipped. Its library contains five thousand and twenty-four volumes, and its reading-room is well supplied with literary and technical journals and newspapers.

BUILDINGS.

The Main Building is of brick, with brownstone trimmings, and is one hundred and seventy by sixty-four feet; part four stories in height and the remainder two. The lower floors contain the offices of the President, the Registrar, and the Bursar, several recitation-rooms and the chemical and physical laboratories. The upper stories are occupied by students.

In this, as in other buildings, every precaution has been taken to secure good sanitation. The rooms are well lighted, well ventilated and conveniently arranged.

The Mechanical Engineering Building is a plain, substantial two-story brick building, with large annex. It contains the drawing-rooms, recitation-rooms, and shops of the department.

Primrose Hall is a two-story brick building used for drawing-rooms and laboratories by the Department of Civil Engineering.

The Textile Building is a two-story brick building one hundred and twenty-five by seventy-five feet, with a basement. Its construction is similar to a cotton mill, being an illustration of standard construction in this class of buildings. The basement contains the dyeing department, the first floor the looms and warp preparation machinery, and the second floor the carding and spinning machinery.

Pullen Hall.—In honor of the late R. Stanhope Pullen, the greatest benefactor of the College, the large new building recently finished has been called Pullen Hall. The basement of this building is used as a dining-room and seats five hundred students. The first story is used for library, reading-room, and lecture-rooms. The second story serves as the College auditorium. This room is commodious, comfortable and well lighted.

The Agricultural Hall is a three-story buff press-brick building with granite trimmings and is two hundred and four by seventy-four feet. The lower or basement floor contains the class-rooms and laboratories for work in the Department of Animal Husbandry and Dairying. Ample provision is made for butter-making, stock judging, farm butchering, and cold-storage accommodations for the products.

The second floor contains the offices of the department, class-rooms for animal husbandry and agronomy, and laboratories for soil physics and agricultural machinery.

On the top floor are the rooms devoted to botany and vegetable pathology, zoology, physiology, and veterinary medicine. There are well-equipped class-rooms and large, well-lighted laboratories.

The building affords the best accommodations for education in agriculture and allied subjects, and is especially adapted to its needs.

Watauga Hall is a three-story brick building, trimmed with brown-stone and containing sixty rooms for dormitories. There is also a large dormitory in the attic, and in the basement are bath-rooms, which are free for students' use.

Dormitories.—In addition to Watauga Hall, one three-story and three two-story brick buildings are used exclusively for dormitories.

The Infirmary is a two-story brick building, containing a sitting-room, seven bed-rooms, three bath-rooms, a kitchen, linen-room, College Physician's office and medicine closet. The rooms are large, well ventilated, well lighted, and heated with open fire-places. Each room opens upon a large, pleasant portico. The furnishing and equipment of the rooms are such as are used in modern hospitals.

Foundry.—The old boiler house has been fitted up for foundry purposes. It contains a Griffin Oil Furnace for melting iron; another for brass, and a small crucible furnace for brass melting; benches and hand tools for moulding in the course of exercises, as well as for any repair work for the College.

The Barn is a frame building of modern design and carefully planned for the purposes to which it is devoted. The barn is fifty by seventy-two feet and three stories high.

The Fire Protection of the College consists of the following equipment: An Underwriter fire pump, stand-pipe and reservoir, hose and hose reels. Hydrants are conveniently located about the grounds, with attached hose nozzles, etc. The buildings are supplied with extinguishers.

The New Power Plant furnishes heat, light, and power for all the buildings. The boiler plant consists of two 75-horse-power Babcock and Wilcox Company and two 100-horse-power Atlas Water-Tube Boilers, with a working steam pressure of 150 pounds. The Engine Plant consists of a 100-horse-power Skinner Engine and Crocker-Wheeler Generator attached; a 100 K. W. De Laval Turbine Generator set with self-exciter; a 10 K. W. steam-driven Exciter; Set, Steam, and Vacuum Pumps for feeding the boilers and maintaining circulation in steam-heating apparatus. The buildings are equipped with Warren Webster system.

THE AGRICULTURAL EXPERIMENT STATION.

The North Carolina Agricultural Experiment Station is a department of the College. It was established originally as a division of the State Department of Agriculture, in accordance with an act of the General Assembly ratified March 12, 1877. Its work was greatly promoted by act of Congress of March 2, 1887, which made a liberal

donation to each State for the purpose of investigations in agriculture and for publishing the same. The bill, which subsequently became a law, was introduced by Representative William H. Hatch, of Missouri. The funds of the Experiment Station were supplemented by the act of Congress of March 16, 1906, known as the "Adams Act."

The Director's office is in the new Agricultural Building and the laboratories are in the main building at the College. The experimental work in agriculture, horticulture, stock and poultry raising, and dairying is conducted on the College farm, and the investigations in plant diseases and chemistry are made in the College laboratories.

The Station is always glad to welcome visitors and to show them the work in progress. The Station conducts a large correspondence with farmers and others concerning agricultural matters. It takes pleasure in receiving and answering questions.

Publications relating to general farming matters and embodying the results of experiments are published and sent free to all citizens of the State who request them. A request addressed to the Agricultural Experiment Station, West Raleigh, N. C., will bring these publications and answers to letters.

THE PURPOSE OF THE COLLEGE.

The College is an institution where young men of character, energy, and ambition may fit themselves for useful and honorable work in any line of industry in which training and skill are requisite to success. It is intended to train farmers, mechanics, engineers, architects, draughtsmen, machinists, electricians, miners, metallurgists, chemists, dyers, mill-workers, manufacturers, stock-raisers, fruit-growers, truckers, and dairymen, by giving them not only a liberal but also a special education, with such manual and technical training as will qualify them for their future work.

It offers practical and technical education in Agriculture, Horticulture, Animal Industry, Civil Engineering, Mechanical Engineering, Electrical Engineering, Mining Engineering, Metallurgy, Chemistry, Dyeing, Textile Industry, and Architecture. It also offers practical training in Carpentry, Wood-turning, Blacksmithing, Machinists' Work, Mill-work, Boiler-tending, Engine-tending, Dynamo-tending and Installation, Electric-light Wiring, Armature Winding and other subjects relating to practical electricity.

Although the leading purpose of the College is to furnish technical and practical instruction, yet other subjects essential to a liberal education are not omitted. Thorough instruction is given in English, Mathematics, History, Political Economy, Physics, Chemistry, Botany, Zoology, Physiology, and Geology.

The College is not a place for young men who desire merely a general education without manual or technical training, nor for lads lacking in physical development, mental capacity, or moral fiber, nor for those who are unable or unwilling to observe regularity, system, and order in their daily work.

WHAT THE COLLEGE EXPECTS OF ITS STUDENTS.

It is taken for granted that students in the College are here to get an education. They are expected, therefore, to attend classes, lectures, laboratories, shop-work, drills, inspections, etc., without being reminded of such duties each day, week or month.

Students cannot properly prepare for and perform these duties if they spend time in Raleigh or absent themselves from work and study. They are expected, therefore, to observe study hours in their rooms and refrain from visiting Raleigh, except when permitted by the rules of the College.

Students are also expected to keep their rooms neat and orderly; to refrain from noise during study hours, and from disorderly conduct at all times and places; in short, to live like gentlemen.

Hazing new students, cigarette-smoking, drinking, gambling, card-playing, visiting pool-rooms, loafing on the streets, and such like vicious, idle, unhealthy and unprofitable performances are prohibited by the College rules.

A record is kept of every student in College; his failures to perform duty and his infractions of the rules. When this record shows that the young man is not in College for the purpose of getting an education, and is not using his opportunities properly, he will be required to withdraw. For scandalous and vicious offenses students will be dismissed.

When absent from any duty a student should immediately file with the Commandant, Registrar, or Instructor concerned a statement of the reason for his absence. When no statement is filed it is presumed that every absence from duty is intentional and without excuse. The rules of the College are intended solely to promote manliness; to form habits of order, punctuality, promptness and fidelity to duty, as well as simplicity, economy and healthfulness of living; and to prevent habits of idleness, disorder, extravagance, and vice.

PRIZES.

A first prize of ten dollars and a second prize of five dollars are awarded annually to the students in the Freshman Class who earn the largest and the next largest amounts of money by labor on the College farm.

The North Carolina State Fair Association offers a prize of \$5 to the student preparing the best essay on the Live-stock Exhibit at the State Fair.

Mr. Frank E. Lowenstein, of Atlanta, Ga., a former student of the College, has donated a medal valued at \$25 to be awarded to the member of the Sophomore Class making the best grade in Chemistry.

To the Junior Mechanical Student who has made the most progress in Mechanical Drawing the Mechanical Department gives a set of high-grade drawing instruments.

DISCIPLINE.

The discipline is intended to secure studious habits, with punctuality, system, and order in the performance of all duties. Every effort is made to develop strong, intelligent, high-toned men; and proper patience, forbearance, and sympathy are used in this great work; but the College is in no sense a reform school, and it will not retain young men who are vicious, idle, or incompetent.

REPORTS AND SCHOLARSHIP.

Regular reports of scholarship and conduct are sent to parents and guardians at the end of each term. Special reports are made whenever necessary. Students who are persistently neglectful of duty, or manifestly unable to do the work required, will be discharged at any time. The Faculty will require any student to withdraw whenever it is plain that his stay in the institution is not profitable to himself or to the College.

RELIGIOUS INFLUENCES.

All students are required to attend chapel exercises in Pullen Auditorium each morning. These services are conducted by the President, by some member of the Faculty, or by some visiting minister.

Each student is expected to attend religious service in Raleigh on Sunday morning at the church of his choice.

YOUNG MEN'S CHRISTIAN ASSOCIATION.

The Young Men's Christian Association is a voluntary organization of the students, and is entirely under student management. A general secretary is employed by the association and devotes his entire time to the work. The members of the Faculty are interested in the work and give assistance, both financially and otherwise. Any student who is a member of an evangelical church may become an active member. Any student of good moral character or who desires to improve his moral life may become an associate member.

Two regular meetings of the association are held each week, on Sunday and Wednesday evenings, immediately after supper. These meetings are for the training of men to be leaders in religious work after leaving College.

The greatest work of the association is its Bible Study department. About one hundred men are enrolled in these classes. Six or ten men meet in each class and study together. The leaders of these classes are trained by members of the Faculty, and the entire work is under the supervision of the Bible Study Committee and the General Secretary. Every student, whether a member of the association or not, should take advantage of this opportunity and join one of these groups.

The following courses are offered :

Course I.—"Study in Old Testament Characters." A new course, dealing with the great men of the Old Testament, and serving as an introduction to the other courses.

Course II.—"Studies in the Life of Christ." A course intended to give the student an intelligent and sympathetic view of the life and character of Jesus Christ.

Course III.—"Studies in the Acts and Epistles." This course introduces men to the life and work of the early Christian Church, with especial emphasis on the life of Paul.

Course IV.—"The Teachings of Jesus and His Apostles." A scientific and systematic presentation of Christ's own view of His own life and its relation to men.

In addition to the above courses on Bible Study the following courses on missions are offered.

1. The New Era in the Philippines.
2. Effective Workers in Needy Fields.
3. The Call of the Home Land.
4. China and Her Problems.

ATHLETICS.

The College is provided with extensive grounds, which furnish ample facilities for military drill and athletic sports.

Outdoor sports are directly managed by the Athletic Association and are under the control of a committee of the Faculty.

The Athletic Association is organized by the student body to promote physical health and manly spirit through athletic sports. Under the direction of the Athletic Committee of the Faculty it promotes practice in base-ball, foot-ball, track athletics, etc.

LIBRARY AND READING-ROOMS.

The College Library occupies the first story of Pullen Hall. The reading-room is supplied regularly with about one hundred and fifty magazines and journals of various kinds, and yearly additions are being made to this number. The library contains about five thousand volumes. There are also reference libraries in the different departments. The library is kept open from 9 A. M. to 6 P. M. The Librarian is always present to assist students in finding desired information.

The Olivia Raney Library in Raleigh, containing now about seven thousand volumes, is free to the students and they have the privilege of borrowing books from it. Students also have the privilege of consulting books in the State Library.

STATE MUSEUM.

Students have free access to the large collections of the State Museum. These collections furnish most excellent opportunities for studies in Geology, Mineralogy, Mining, Forestry, and Natural History.

COLLEGE SOCIETIES.

Such college organizations are encouraged as tend to form good character, to develop manly physical vigor, and to promote literary, scientific, and technical research and training.

The **Biag Society** is composed of those students who have made the best record in biological and agricultural subjects. The membership is limited to ten. The Society meets monthly for the discussion of biological and agricultural questions.

Farmers' Institute.—The students in the Winter Course in Dairying and Agriculture meet every Wednesday night during the winter term for a discussion of practical agricultural problems. The meetings are conducted in the manner of a Farmers' Institute and give training in conducting farmers' meetings, *ex tempore* speaking on agricultural questions, and writing and reading of reports on various farm operations.

The **Rural Science Club** meets semi-monthly for the discussion of agricultural subjects, review of current agricultural publications, and reports on personal experiments and the work of the College farm and Experiment Station.

The **Biological Club** meets semi-monthly for the discussion of biological subjects in their relation to practical agriculture. Students here present results of their own investigations and observations

and reviews of the more important current publications, particularly those from the United States Department of Agriculture and the State Experiment Stations.

The Tompkins Textile Society meets every two weeks for the purpose of discussing subjects relating to the textile industry.

The Mechanical Society meets every two weeks for the discussion of mechanical subjects.

The Berzelius Chemical Society meets weekly for the discussion of chemical subjects and for review of the current chemical literature, with which the College is well supplied.

The Merriman Society of Civil Engineering meets fortnightly for the purpose of reading and discussing papers of interest to civil engineers.

The Pullen and Leazar Literary Societies afford excellent opportunities for practice in declamation, debate, composition, and parliamentary law, as well as opportunities for social pleasure and recreation.

The Glee Club is composed of about twenty young men, embracing the best musical talent of the College. It aims to give one concert each year, and afterwards to sing at various College entertainments and functions during the year.

The Alumni Association meets each year on Monday preceding Commencement Day, transacts its annual business, hears the Alumni oration and attends the annual Alumni banquet. This Association purposes raising funds to erect an Alumni building at the College.

REQUISITES FOR ADMISSION.

Each applicant for admission must be at least sixteen years of age and must bring a certificate of good moral character from the school last attended.

To the Four-year Courses.—Applicants for admission to the Freshman Class of all four-year courses will be examined on the following subjects: Arithmetic (complete), Algebra (to involution), English Grammar, Analysis and Composition, and American History. No student will be admitted to the Freshman Class whose examination papers are seriously faulty in spelling, grammar, punctuation, or division into paragraphs.

To the Two-year Courses.—Applicants for admission to the two-year courses in Mechanic Arts and Textile Industry will be examined on Arithmetic (through common and decimal fractions), English Grammar and Composition, and American History.

To the One-year Course in Agriculture.—Applicants for admission to the one-year course in agriculture will be required to pass the examination for entrance to the Freshman Class.

To the Winter Courses.—No entrance examination is required of candidates for admission to the winter courses. No one under eighteen years of age will be admitted to a winter course.

ENTRANCE EXAMINATIONS.

Entrance examinations will be held by the County Superintendents of Instruction in each court-house in the State at 10 o'clock A. M. the second Thursday in July of each year. The date for 1908 is July 9th. These examinations will save the expense of a trip to Raleigh in case the candidate should fail or if there should not be room enough for him in the College. Entrance examinations will be held also at the College at 9 o'clock A. M. on Wednesday preceding the opening day. The examinations begin with English at 9 A. M., in Room 21, Main Building, followed by Mathematics at 11, and History at 2, in the same room. The date for 1908 is September 2d.

ADMISSION WITHOUT EXAMINATION.

The following persons will be admitted without examination:

1. Applicants for admission to winter courses, over eighteen years of age.
2. School teachers holding teachers' certificates.
3. Graduates of those high schools and academies whose certificates are accepted by the Faculty of this College.

SESSION.

The College session lasts nine months, and opens annually the first Thursday in September and closes the last Wednesday in May, with a vacation of about two weeks at Christmas.

EXPENSE.

The total average college expense of a Freshman student is \$225.00.

The total average college expense of a Freshman student having a scholarship is \$180.00.

These amounts include cost of board, tuition, lodging, fuel and lights, fees and deposits, books, uniform and cap, drawing instruments, and laundry. They do not include allowance for clothing, other than for uniform and cap, nor for spending money and contingencies.

Allowance for clothing, spending money, and contingencies is a matter largely to be determined by the parent.

The amount of such allowance should be kept within reasonable bounds. From \$50.00 to \$100.00 per year are suggested as the minimum and maximum amounts.

This will make the total expense for all purposes of a Freshman student, without a scholarship, amount to from \$275.00 to \$325.00 for the entire session; or \$230.00 to \$280.00, if he has a scholarship.

The largest payment is made in September. A student on entering college should bring about \$80.00 to meet his various payments for the first month, or \$57.50, if he has a scholarship.

Students withdrawing from college within two weeks from date of entrance will be refunded all money paid by them to the College Bursar, except charges for board during the time here. Students withdrawing later than two weeks from date of entrance will be refunded no money except for board.

Board is \$10.00 per month and is payable on the first day of each month from September to May inclusive; board for less time than one month is charged for at the rate of fifty cents a day or \$3.00 per week.

The College Bursar is forbidden by the Trustees to give credit, and there is no deviation from this rule.

A more detailed statement of college fees is as follows:

Tuition	\$ 45.00
Room rent, fuel and lights.....	30.00
Library, lecture, and physical culture.....	4.00
Incidental	5.00
Medical attention and medicine.....	6.00
Registration	2.00
Board	90.00
Shop and Drawing (material and use of tools) or Botany	2.00
Uniform and cap.....	14.30
Books and drawing instruments (estimate).....	15.00
Laundry (estimated cost).....	10.00

Drawing instruments are not required in the Freshman Class nor in the first-year Mechanic Arts course until the beginning of the second term. These instruments are furnished by the College at cost to all students requiring them. New students are advised not to purchase instruments before consulting the drawing instructors.

The College rooms are supplied with necessary furniture. Each student should bring with him two pairs of blankets, two pairs of sheets, two pillow-cases, one pillow and two bed-spreads for single bed.

In addition to the fees enumerated above, students are required to pay fees as follows: A fee of \$1 from students taking work in biological (except bacteriological), physical, or electrical laboratory, for material furnished. The deposits for the Chemistry Department are as follows: Inorganic laboratory, \$3; analytical laboratory, \$6; organic laboratory, \$4; determinative mineralogy and assaying, \$3. A deposit of \$3 from Juniors and \$4 from Seniors taking dyeing or bacteriology, to cover cost of breakages. A deposit of \$5 from textile students, to cover cost of designing, supplies, tools, etc. Any unused portion of deposits to chemical, bacteriological or dyeing laboratories or to the Textile Department will be returned at the end of the year. If the deposit made is not sufficient to cover breakages and cost of material furnished, the students are required to make good the deficiency.

UNIFORM.

The College uniform must be worn while on military duty by all students. It must be purchased at the College from the contractor. The uniform is of a strong gray cloth, and with care it will last a year. Each student is required to wear an overcoat during cold weather. Overcoats may be brought from home, or purchased from the city.

FREE TUITION.

Scholarships, one hundred and twenty in number, conferring free tuition, are given to needy boys of talent and character. As far as possible, these scholarships are distributed among the counties of the State. Appointments are made only by the President of the College upon written recommendation of members of the Legislature. The scholarships are not intended for people who have property. Certificates of inability to pay must be made by the applicant and endorsed by the person recommending him.

SELF-HELP.

Many students pay their own expenses, either wholly or partly, by doing various kinds of work. There is regular employment for a limited number, enabling them to earn from \$4 to \$10 a month. There

is also occasional employment, paying from \$2.50 to \$5 a month. The work offered is mainly on the farm, in the barn, milking and feeding cattle, etc., and is for agricultural students only. There is very little work available for others, except serving in the dining-room. Young men should not rely upon material help from work the first year, as most of the work is given to students who have had a year's experience at the College. Application for work should be made before the student comes to college.

STUDENT LOAN FUND.

The Alumni Association of the College has established a small fund to be loaned to needy students of talent and character. The loans are made at six per cent., and good security is required. Sufficient time for repayment is given to enable the student to earn the money himself. The amount lent to each student is limited. The purpose is to help young men who are willing to help themselves and who cannot find sufficient employment while in college to meet all their necessary expenses.

Contributions are solicited for this fund from students, Alumni, and friends of education generally. The fund is administered by the College Bursar, under the direction of the President. At present the fund amounts to \$1,860.88.

BOARD AND LODGING.

All students are expected to board in the College mess-hall and to room in the College dormitories. An abundant supply of plain, nourishing food, with as large a variety as possible, is furnished absolutely at cost. The charge at present is \$10 per month, payable in advance.

Rooms in the College dormitories are supplied with electric lights, steam heat, and all necessary furniture, except sheets, blankets, pillow-cases, pillows, bed-spreads, and towels, which each student must furnish for himself. The charge for lodging is by the month, and there is no reduction in case of withdrawal.

CARE OF THE SICK.

Every effort is made to protect the health of young men in the College. Regular inspections of the entire institution are made once a year, or oftener, by the State Board of Health. Similar inspections are made monthly by the College physician. There is an abundant

supply of pure water from twelve deep wells. Each student has a regular routine of daily life, including abundant physical exercise in the shops and on the drill grounds.

In case of sickness a student is taken immediately to the College Infirmary, where he receives medical attention and careful nursing.

The College physician visits the Infirmary daily at 1:30 o'clock P. M., and in cases of serious illness as frequently as may be required.

A trained nurse has charge of the Infirmary at all times.

COURSES OF INSTRUCTION.

The College offers the following Courses of Instruction :

I. Four-year Courses:

- 1st. Agriculture** (including Agriculture, Horticulture, Veterinary Science, Biology, and Agricultural Chemistry).
- 2d. Engineering** (including Civil Engineering, Mechanical Engineering, Electrical Engineering, Mining Engineering, and Industrial Chemistry).
- 3d. Textile Industry or Cotton Manufacturing** (including Carding, Spinning, Weaving, Designing, and Dyeing).

These courses offer a combination of practical and theoretical work, about half of the time being devoted to lectures and recitations and the other half to work in the shops, laboratories, drawing-rooms, greenhouses, dairies, fields, and mills. They are intended to furnish both technical and liberal education. The degree of Bachelor of Agriculture is conferred upon a graduate in the four-year course in Agriculture. The degree of Bachelor of Science is conferred upon a graduate of the four-year course in Chemistry or Dyeing, and the degree of Bachelor of Engineering upon a graduate of either of the other four-year courses.

II. Short Courses of one year in Agriculture, and of two years in Textile Industry, in the Mechanic Arts (including Carpentry, Wood-turning, Blacksmithing, Machine-shop Work, Drawing, and Dynamo and Engine Tending, and in Applied Electricity).

The short courses include nearly all the practical work of the four-year courses, with less theoretical instruction. They are intended for students who desire chiefly manual training, and do not lead to a degree.

III. Winter Courses in Agriculture and Dairying and in Textile Industry, beginning at the opening of College in January and lasting seven weeks. A one week's course in Agriculture, beginning with the opening of the Winter Term.

IV. Normal Courses for the training of teachers along industrial lines.

V. Graduate Courses, extending over two years and leading to advanced degrees, are intended for students who have completed the Four-year Courses and who desire further instruction and training along special lines.

AGRICULTURAL COURSES.

I. The Four-year Course in Agriculture.

1a. The One-year Course in Agriculture.

1b. The Seven Weeks' Course in Agriculture and Dairying.

1c. The One Week's Course.

Aim and Scope.—The aim of the Agricultural Courses is to train young men in both the science and the practice of their vocation. It is believed that every young man preparing to farm needs a double education—one that is practical, to fit him for his profession: another that is cultural, to fit him to live.

In order to meet the necessities of all young men who desire instruction in Agriculture, the College offers four distinct courses:

The four-year course aims to give a training that is thoroughly practical as well as scientific in Agriculture and its various branches, such as Stock-raising, Dairying, and Horticulture. The strictly technical portion constitutes about one-third of the work. Of the remaining two-thirds of the course more than one-half is prescribed in the sciences. This is done for the training and information they give, and to prepare for the technical work of the course. Because of this, and because the subject-matter and the methods of the technical portion lie so fully within the domain of science, the course is essentially scientific rather than literary. Yet the College is mindful of the fundamental character of English Literature and of Political Economy as training studies, and reasonable attention to these studies is required.

The one-year course in Agriculture is designed to meet the needs of young men who are ambitious to excel in the vocation of farming, and who feel the need of better preparation for their life-work. The time which can be devoted to study is often limited, hence the topics in this course have been arranged in such a manner that the student is enabled to get the greatest amount of practical information in the time at his disposal.

Education and training pay on the farm as elsewhere. The young man who prepares himself for his life's work will make more rapid strides and will gain success much quicker than the one who does not.

The College has numerous calls for young men to manage farms and estates. It is able to fill only a limited number of them. Young men who have any talent along this line can fit themselves for this work by taking this course.

The seven weeks' winter course in Agriculture is established to meet the needs of those who can spend only the winter at the College.

The important and practical subjects of Agriculture and Horticulture and Stock-raising receive principal attention.

The seven weeks' dairy course is a course in practical butter-making in accordance with the most approved methods of the modern creamery.

The one week's course is described on page 32.

Methods of Instruction.—Instruction is by laboratory work, supplemented by text-books, lectures, and reference readings, which are almost constantly assigned from standard volumes and periodicals.

The equipment for the technical work of the course is rapidly increasing. The Department of Agriculture is fitting up laboratories for investigation in Soil Physics and in the mechanical analysis of soils. The Dairy Department is equipped with a modern creamery for pasteurizing, separating, creaming and churning, and for investigation in dairy bacteriology.

The department makes free use of the fields, orchards, and gardens, in which the Agricultural Experiment Station conducts experiments in methods of culture, in effects of several practices upon yield and upon fertility, in varieties of fruit, of vegetables and of forage crops. The methods employed and the results obtained are freely used for instruction.

I. Four-year Course in Agriculture, leading to the Degree of Bachelor of Agriculture.

SEVEN WEEKS' COURSE IN AGRICULTURE.

BEGINS JANUARY 11, 1909.

The Agricultural and Mechanical College offers, besides the four-year course and one-year course in Agriculture, a **seven weeks' course** and a **one week's course**, which are held during the winter months, when the farmers are not busy.

OBJECT.

These courses are designed to meet the needs of those who desire a knowledge of the **practical side of farming**, dairying, and poultry-raising, but who have not time to take the regular course in College. Our experience in the institute work of this State leads us to believe that the farmers are demanding more definite knowledge of their business. Since this can be acquired more easily and at less expense at an Agricultural College than by long experience on a farm, this course is offered.

Young men who have a desire to become farm managers can partially fit themselves for such work by taking this course. The College is called upon frequently to supply farm managers, which it is unable to do because the supply is not equal to the demand. There is a chance for any bright young man who has not money enough to equip a farm of his own to better his condition by fitting himself to accept a position as farm manager.

The demand for well-trained dairymen has also far exceeded the supply, and we have several vacancies now which we are unable to fill. The most imperative demand at present is not the filling of these places, but to find men who will receive proper training, return to the farm, and there engage in putting a stop to the importation of all kinds of dairy and farm products from other States.

Instruction in this course is given in such a manner that the students learn by actual contact and experience. Practical exercises in identifying varieties of farm crops, fruits, judging farm animals, butter-making, propagation of plants, and making and applying spraying mixtures are the means employed in illustrating and fixing in the minds of the students the instruction given in the class-room.

EQUIPMENT.

A new building devoted entirely to Agriculture has been completed. This building furnishes laboratories and class-rooms for all work in Agriculture. Equipment is being added constantly and the facilities for instruction will be much better this year than heretofore.

EXPENSES.

For the Seven Weeks' Course no tuition will be charged. There will be a small medical fee of \$1.50. Board may be had in the mess-hall at \$2.50 per week. Students who expect to room in dormitories should come provided with covers, sheets, pillow-cases, and towels.

Students will be required to wear white suits in the dairy laboratory. These suits can be had at \$1 each.

Books, papers, etc., need not cost over two or three dollars.

The total expense of the course need not exceed \$25 over and above railroad fare.

For the One Week's Course there will be no fees. The only expense will be that of board and lodging.

ADMISSION.

No examination is required for entrance to the **Seven Weeks' Course**. Any person over eighteen years of age may enter and enjoy the full privileges of the instruction. Since the greater part of the instruction is given in the form of lectures and laboratory work, the full time of the student is provided for. Some of the evenings will be taken up by lectures on important subjects. Meetings of the students will be held from time to time for their mutual improvement.

The lecture and laboratory work begins on Monday, January 11th, and those who expect to take the course should come on Saturday before, so that they can have their board and room arranged for and be ready for work Monday morning.

OUTLINE OF COURSES.

The one week's course will be given preceding the seven weeks' course. Those who wish to go into the subjects more fully may do so in the seven weeks following.

ONE WEEK'S COURSE.

This course will be given from January 4th to January 9th, inclusive.

During this course only three subjects will be treated, namely:

Corn, Cotton, and Stock-raising.

In studying corn and cotton much time will be given to *seed selection*. *Corn judging* will be a feature of the work with corn. Attention will be given to the best methods of preparing the seed-bed, use of fertilizers and cultivation of the crop.

Lectures on stock-raising and practical work in judging cattle, horses, sheep, and swine will be given.

In this course pupils get practical instruction which they put into use after going home, and thereby increase the profits of their farms.

During the evenings of this week special lectures will be given on other farm subjects.

SEVEN WEEKS' COURSE.

GENERAL AGRICULTURE.

21 periods.

Professor Conner.

Farm Crops.—Conditions of germination and growth of plants; seed selection; preparation and cultivation; studies of varieties of corn, cotton, and other crops; judging corn and cotton.

Soils.—Study of origin, formation, and distribution of soils, their physical properties as related to tillage and fertility; laboratory practice with different types of soils.

Farm Equipment.—Construction of farm buildings; the silo and its use; farm machinery; principles of draft, etc.

Fertilizers.—Kinds for different crops; home-mixing; time and method of application; value of stable manure and leguminous crops.

The department is well equipped with various makes of farm machinery for laboratory work. A large room in the Agricultural Building is used for this purpose.

AGRICULTURAL BOTANY.

21 periods.

Professor Stevens.

This course consists of lectures and laboratory work. Such subjects as the following will be considered: Cross-breeding of plants; The flower and its structure; Pollen and its use; Improvement of plants by seed selection; The diseases of plants, how to recognize them and how to prevent them; Bacteria in the home and on the farm, their role as disease-producers in man, domestic animals and plants, their function in the dairy, in the making of butter and cheese, in the soil, in rendering plant-food available, and in leguminous roots as nitrogen-gatherers.

HORTICULTURE.

21 periods.

Assistant Professor Reimer.

The course in Horticulture includes both lectures and laboratory work. It is made especially applicable to North Carolina conditions. The work includes the following subjects:

Fruit Culture.—This course includes a discussion of the fruit section of the State, and a discussion of the possibilities of fruit-

growing in each section. This is followed by lectures on the culture of the leading fruits. These deal with the kind of soil; preparation of soils for fruits; varieties; origination of new varieties; planting; cultivation; fertilizing; pruning; harvesting, and marketing. Emphasis is laid on the home fruit garden.

Vegetable Gardening.—This course discusses the great trucking industry in the State, and the possibilities of the industry. This is followed by lectures on the best methods of growing the leading vegetables.

A few lectures are also given on the improvement of home grounds.

Laboratory Work.—This includes practices in plant propagation, as budding, grafting, top-grafting, cutting; pruning of fruit and ornamental trees; fruit-bud studies; planting trees; transplanting, and construction of cold-frames and hot-beds.

FEEDS AND FEEDING AND STOCK-RAISING.

21 periods.

Assistant Professor Curtis.

Lectures on this study will consist of an elementary study of the digestive systems of the various classes of farm animals, indicative of the kinds of foods adapted to their particular digestive apparatus. This will be followed by the food constituents, the kind, amount and proportions best adapted to the various classes of live-stock. The student will be required to make tables of digestibility, calculate nutritive ratios, and arrange feeding rations for the several classes of stock relative to the work which they are to perform.

An outline will also be given on the feed, care, and management of the most prominent breeds of live-stock.

BREEDS OF LIVE-STOCK AND STOCK JUDGING.

21 periods.

Assistant Professor Curtis.

Lectures are given on this subject relating to the origin, history, and characteristics of the different breeds of live-stock.

The practical part of the work will be given in the judging-room, where the student is required to score the animals, after which a comparative study will be taken up relative to the merits of each animal in the class.

DAIRY FARMING.

{ Lectures, 12 periods.

Associate Professor Michels.

{ Laboratory, 21 periods.

Lectures are given on the nature, composition, and secretion of milk, its uses and values as a food, the production and care of sanitary milk, management of dairy herd, details in the production of high-grade cream and butter, the marketing of dairy products, and their value when sold as milk, cream, butter, and cheese.

The dairy laboratory course given in connection with the farm dairy lecture course consists of twenty-one periods of two hours each and comprises every detail of dairy work, butter-making, retailing milk, pasteurizing milk and cream, making and using starters, and making tests of all sorts of dairy products, and standardizing milk and cream.

DAIRY EQUIPMENT.

The dairy laboratories occupy about four thousand square feet of floor space on the ground floor of the new Agricultural Building, besides the locker-rooms, toilet and bath-rooms on same floor, and the dairy lecture-room on first floor, used by the dairy students.

The main dairy laboratory is thirty-six by fifty-seven feet and is fitted throughout with modern equipment, suited to giving up-to-date instruction in farm dairying, retailing milk, and creamery practice. The equipment for farm dairying consists in the main of De Laval, Sharples, Empire, National, and Simplex hand separators, swing and barrel hand churns of different sizes, cream vats, hand and power butter-workers, aerators and coolers, milk-testers, and other articles useful in doing farm dairy work.

DISEASES OF LIVE-STOCK.

21 periods.

Dr. Roberts.

The lectures on this subject will deal principally with the care and management of live-stock with a view to the prevention of diseases, but the nature, causes, and treatment of the more common diseases and injuries will also be given attention. One period each week will be devoted to a clinic, and a practical demonstration of the tuberculin test upon the dairy herd will be given during the course.

ENTOMOLOGY.

21 periods.

Mr. Smith.

This is a short course in which the more important noxious insects are studied, with special reference to methods of preventing their injuries. The various insecticides and methods of spraying are also included in this course.

FARM CHEMISTRY.

21 periods.

Professor Withers.

Lectures on chemistry of fertilizers and animal feeding will be given.

POULTRY-RAISING.*21 periods.***Mr. Jeffrey.**

The subject of Poultry-raising will be considered from the farm standpoint and will include poultry-house construction, the breeds of fowls most suited to the farm, and their breeding, feeding, and management, egg-production, market poultry, including capons and caponizing, incubation and brooding, both natural and artificial.

Those wanting more poultry work than is provided in the regular course can in the last half of the course have additional work of this kind, taking care of a pen of fowls, running an incubator, raising chickens in a brooder, and keeping all the records necessary in our poultry work.

The poultry department is equipped with twenty-five houses, a good incubator cellar with several different makes of incubators, a brooder house and both indoor and outdoor brooders, a feed-room with steam engine and grist and bone mills. Good specimens of ten varieties of poultry best suited to farm requirements are kept, so that students can get familiar with the requirements of the different breeds.

AGRICULTURE.**Equipment.**

The College possesses the following equipment for instruction in Agriculture:

The farm includes six hundred and twenty-five acres, with two hundred and fifty acres under cultivation; a large three-story and basement barn fifty by seventy-two feet. The first floor is occupied by farm implements and machinery; the second story is occupied by horses, grain-bins, cutting implements, etc.; the third story, by hay, which is elevated by a Ricker and Montgomery hay-carrier. Just outside the barn are two 70-ton silos and one 125-ton silo. These are connected with a No. 18 Ohio feed and ensilage cutter. Power for cutting is supplied by an eight-horse-power Skinner engine. The farm is supplied with all necessary machinery for the most successful and up-to-date farming.

The live-stock consists of necessary horses and mules, a herd of dairy cattle, and a herd of swine. The Poland China and Berkshire swine are pure bred, and from high-class specimens. Breeding-stock is sold as a part of the farm products.

The poultry-yard is divided into sixteen lots. The buildings consist of incubator cellar, brooder-house, and hen-houses. Several different incubators are used. The poultry-yards contain the following

breeds: White Wyandotte, White and Barred Plymouth Rock, Black Minorca, Brown Leghorn, Light Brahmas, and Pekin Ducks.

The class and laboratory work is done in Agricultural Hall.

AGRONOMY.

Subjects of Instruction.

1. Farm Equipment.—Lectures and recitations upon selecting, planning, and equipping farms; planning and erecting farm buildings, farm vehicles, and machinery; power, water, and drainage; practical exercises in drawing plans of farms and farm buildings; leveling and laying drains, dynamometer tests of wagons and farm implements, etc. Five periods, first term; two periods, third term. For Juniors. Professor CONNER.

2. Soils.—Lectures and recitations upon composition, formation, kinds and physical properties of soils and their improvement by cultivation, natural and artificial fertilizers, drainage and irrigation. Practical exercises in testing physical properties of several soils, determining the relation of soils to heat, moisture, air, fertilizers, and mechanical analysis. Three periods, second term. For Juniors. Professor CONNER.

3. Farm Crops.—Lectures and recitations upon the history, production, harvesting, and marketing of farm crops. Practical exercises with growing and dried specimens of farm crops. Two periods, second and third terms. For Sophomores. Professor CONNER.

4. Special Crops.—This course is designed for advanced work in farm crops. Corn and cotton are taken up in detail and studied in all their relation to farm economy. Other crops of importance are taken up as time permits. Five periods, first term; three periods, second term. For Seniors. Professor CONNER.

5. Soil Physics.—This course is for more advanced work in soils, and consists of laboratory practice and lectures on origin, formation, and classification of soils; soil moisture and methods of conserving it; soil temperature; soil texture; mechanical analysis of soils, etc. The soils of the State will be studied. Free use of soil maps will be made. Three periods, third term. For Seniors. Professor CONNER.

6. Farm Management.—Lectures upon history of agriculture; present agricultural methods in various countries, cost and relation; profits of various farm operations and systems. Two periods, second and third terms. For Seniors. Professor CONNER.

7. Agriculture (Elementary).—The course in Elementary Agriculture will consist of lectures and recitations from text-book on soils, crops, fertilizers, farm equipment, and farm machinery. One period

per week will be devoted to practical exercises, taking up the analysis and classification of soils; identification and habit of growth of farm crops; drawing plans of farms and farm buildings. The work will be made practical and will be suited to the needs of the student. Five periods. Required of one-year students. Professor CONNER.

ANIMAL HUSBANDRY.

10. Breeds of Live-stock.—The origin, history, and characteristics of the several breeds of live-stock are studied by the students. Where possible actual specimens are used to show the breed characteristics, and where representative animals can be found within a reasonable distance, the student is permitted to visit such places. This enables the student to determine the breeds best adapted to the different conditions and environments. Two periods, first term. Required of Freshmen. Assistant Professor CURTIS.

11. Stock Judging.—Practical exercises are given in live-stock judging. The student is required, after familiarizing himself with the points of the score-card, to study the various classes of farm animals in relation to the purposes for which they are designed. The animals are compared and placed according to their relative merits, after which the reasons for so doing are written on blank forms furnished the student. Two periods, first term. Required of Sophomores. Assistant Professor CURTIS.

12. Animal Breeding.—Upon the proper methods of breeding and management depends the success or failure in raising improved types of farm animals. To this end the student is taught the underlying principles or laws which govern the successful breeding and improvement of the various classes of live-stock. The experience and observation of our more successful husbandmen will constitute the foundation of this work. Lectures and recitations. Three periods, second term. Required of Sophomores. Assistant Professor CURTIS.

13. Herd Books.—In the study of herd books the student is taught the essential things which constitute a good pedigree. The breeding of pure-bred live-stock has advanced to such a degree that a record of the ancestry must be kept to preserve the purity and trace the performance of the breed. The foundation of the work will be based on the laws which govern breeding, together with the records issued by the various live-stock associations. The student is required to trace the ancestry of animals in their respective herd books. One period, second term. Required of Sophomores. Assistant Professor CURTIS.

14. Stock Feeding.—The course in stock feeding includes a study of the physiology of the digestive system, also the best methods involved in raising and maturing farm animals for their respect-

ive uses. The feeding of the various classes of animals will be studied, and most profitable methods of feeding and management during the different periods of growth. The chief object of the course is to acquaint the student with the fundamental principles of stock feeding, after which the practical side of the question will be considered, enabling him to compound rations and calculate the nutritive ratios of same. Lectures and recitations. Four periods, third term. Required of Sophomores. Assistant Professor CURTIS.

15. Advanced Live-stock Judging.—This course will include advanced work in judging of live-stock. Particular stress will be laid on breed types of the different classes of farm animals. Heretofore only the dairy and beef types of cattle, fat and bacon types of swine, mutton and wool types of sheep have been considered. This advanced work will include judging of the particular breed types, classing under these general types, and will be a valuable attribute in fixing breed characteristics. Two periods, first term. Elective for Seniors. Assistant Professor CURTIS.

16. Live-stock Management, Beef and Dairy Cattle.—In this course the student will be taught the proper care and management of beef and dairy cattle. Lectures on the results obtained from the most prominent breeders and fitters of beef and dairy cattle will be given. Two periods, second term. Elective for Seniors. Assistant Professor CURTIS.

17. Live-stock Management, Horses, Sheep, and Swine.—This course includes lectures and recitations on the feed, care, and management of horses, sheep, and swine in relation to the respective uses for which they are grown. Two periods, third term. Elective for Seniors. Assistant Professor CURTIS.

18. Animal Husbandry.—Study of breeds, live-stock judging and their management, animal breeding, herd books, and stock feeding. Lectures will begin on all the above subjects, which will be supplemented with practical work as far as possible. Three periods. Required of one-year students. Assistant Professor CURTIS.

DAIRYING.

Dairy Equipment.—The dairy laboratory occupies about four thousand square feet of floor space on the floor of the new Agricultural Building, besides the locker-rooms and the toilet and bath-rooms on the same floor and the dairy lecture-room on the second floor used by the dairy students.

The main dairy laboratory is thirty-six by fifty-seven feet and is fitted throughout with modern equipment suited to giving up-to-date instruction in farm dairying, retailing milk, and creamery practice. The equipment for the farm dairying consists, in the main, of

De Laval, Sharples, Empire, National, and Simplex hand separators, swing and barrel hand churns of different sizes; cream vats; hand and power butter-workers; aerators and coolers; milk-testers; and other articles useful in doing farm dairy work.

Milk testing, which plays such an important part in all phases of dairy work, receives a great deal of attention. Several sizes of hand machines and a twenty-four bottle power tester are used in this work, together with all equipment necessary for testing milk, cream, butter, cheese, skim-milk, whey, and also the lactometer.

The equipment for giving instruction in commercial dairying consists of milk pump, receiving vat, tempering vat, turbine separator, continuous pasteurizer, combined churn and butter-worker, bottling outfit, and bottle washing and sterilizing outfit.

Subjects of Instruction.

22. **Dairying.**—Text-book and lecture course covering the fundamental principles of modern dairying. Two periods, third term. For Freshmen. Laboratory course consists of practice in the use of modern dairy equipment. Each student is required to become familiar with the construction and operation of the leading makes of separators. Proficiency is required of the students in milk testing, standardizing milk and cream, cream ripening, churning, working, packing and scoring butter. Five periods, third term. For Freshmen. Associate Professor MICHELS.

23. **Dairy Bacteriology.**—Lecture and text-book course covering the more important facts in the relation of bacteria to dairying. Two periods, first term. For Seniors. Laboratory course consists in demonstrating and supplementing the lecture course. Practice is given in pasteurizing milk and cream for market; making and using starters in butter and cheese-making. Three periods, first term. For Seniors. Associate Professor MICHELS.

24. **Cheese-making.**—This is a lecture and laboratory course on the manufacture of the leading brands of cheese. Three periods, second term. For Seniors. Associate Professor MICHELS.

25. **Experimental Dairying.**—Lecture and laboratory practice in making butter and cheese of special commercial importance, and a critical study of dairy literature. Three periods, third term. For Seniors. Associate Professor MICHELS.

26. **Dairying.**—This course is designed to give a good working knowledge of farm dairy operations.

The student while in the dairy laboratory uses the leading makes of separators, churns, butter-workers, Babcock testers, etc., until he

is familiar with their construction and until he becomes proficient in operating them.

The laboratory course is supplemented with lectures of a practical nature, covering the most important features of dairying. It is a course of study which should meet the requirements of the farmer and dairyman who handle dairy products, whether for home use or for commercial purposes. Five periods, first term. For one-year students. Associate Professor MICHELS.

POULTRY HUSBANDRY.

The poultry plant has nineteen breeding pens with necessary yards, the houses being of several different types best suited to poultry keeping in North Carolina, an incubator cellar with several different makes of incubators, and a brooder house, which is heated by hot water. Both indoor and outdoor brooders of several different makes are used.

There is also a feed-room equipped with steam engine, grist and bone mills.

The following varieties of poultry are kept: Barred, Buff and White Plymouth Rock; White and Buff Wyandotte; White and Brown Leghorn; Buff Dopington, Light Brahma, Black Minorca, and Pekin Ducks.

29. Poultry Husbandry.—Classification and study of the breeds of domestic poultry; breeding, feeding, and management; construction and location of poultry houses; production and marketing of eggs; production, killing, and marketing of poultry; capons and caponizing; incubation and brooding. Three periods, third term. For Sophomores. Three periods, second and third terms. For one-year students. Mr. JEFFREY.

30. Poultry Husbandry.—Theory and practice of judging fowls by comparison and score-card; special poultry keeping for special markets; comparison of different systems of poultry keeping; a discussion of articles by best writers in poultry press. Three periods, third term. For Seniors. Mr. JEFFREY.

VETERINARY SCIENCE.

The object of the teaching in this department is not to turn out veterinarians, but to more thoroughly equip the agricultural student for the breeding and management of live-stock. In addition to the work required of all students in the agricultural courses, as outlined below, the Senior students in the four-year course in Agriculture may elect to do three periods a week during the entire year. When so elected, this work will be of a more advanced nature, but supplementary to that required of all students in the agricultural courses.

33. Animal Physiology.—The first term's work will deal largely with the structure of the body, whose uses are to be considered later. The second and third terms' work will deal with a comparative study of the bodily functions of man and of the domestic animals. The subject will be covered by lectures and recitations, with laboratory exercises illustrating principles of physiology. Two periods, first term; four periods, second and third terms. Required of Freshmen. Doctor ROBERTS.

34. Veterinary Anatomy.—Lectures, illustrated by charts, models, skeletons, sketches, and by dissections.

Special attention will be given to the organs of digestion and locomotion and such other parts as are of particular interest to the stock farmer. Four periods, first term. Required of Juniors. Doctor ROBERTS.

35. Veterinary Medicine.—Lectures on the actions, uses, and doses of the most common veterinary medicines, and the nature and cause of disease, with special reference to its prevention. Four periods, second term. Required of Juniors. Doctor ROBERTS.

36. Veterinary Practice.—Lectures on the most common diseases and injuries of domestic animals, with appropriate treatment for the same. When practicable, these lectures will be illustrated by clinics, which will enable the student to become more familiar with the different diseases and perform minor surgical operations under the direction of the instructor. Two periods, third term. Required of Juniors. Doctor ROBERTS.

37. Veterinary Medicine.—Advanced course in veterinary medicine and surgery. A continuation of the subject as outlined for Juniors, special attention being given to infectious diseases communicable to man, and their significance in meat and milk inspection. Three periods. For Seniors. Doctor ROBERTS.

38. Diseases of Live-stock.—The lectures on this subject treat of elementary veterinary anatomy and physiology, the care of live-stock to prevent diseases, and the treatment of some of the most common diseases. Five periods, second term. Required of one-year students. Doctor ROBERTS.

HORTICULTURE.

The Horticultural Department occupies rooms in the Agricultural Building, including class-rooms, laboratory, vegetable and fruit cold-storage rooms. It also has a large laboratory connected with the greenhouses. The laboratories are used for such work as seed selection, bud studies, propagation work, budding, grafting, transplanting, study of varieties of fruits, nuts, and vegetable seeds.

The greenhouses consist of three glass structures heated by hot water. They are used for the growing of ornamentals, vegetables, and many exotic plants: a large amount of laboratory work is also carried on in these houses. The student learns the use, importance, and culture of these plants. Many of them are also used to illustrate interesting and instructive characteristics of plant life.

The department is well supplied with apparatus for laboratory work, such as apparatus for seed testing, budding knives, grafting tools, pruning shears and saws, spray pumps, seed drills, and wheel hoes.

The College campus is used in teaching ornamental gardening and a study of economic trees and shrubs. The experimental orchards are freely used for illustrative purposes.

Laboratory work accompanies every subject, always supplementing the class work given at the same time.

Subjects of Instruction.

42. Fruit Culture.—A course treating of the location of orchards, soil for fruits, varieties, planting, cultivation, fertilizing, pruning, harvesting, and marketing of North Carolina fruits. The laboratory work will include practices in budding, grafting, making cuttings, and a discussion of the principles underlying such practices. Also a study of varieties of fruits, fruit buds, and exercises in pruning. Five periods, first term. Required of Freshmen. Assistant Professor REIMER.

43. Vegetable Gardening.—This course deals with the selection and preparation of soil for vegetables, construction of hot-beds and cold-frames, fertilizing, handling of seeds, irrigation, transplanting, storing, and culture of all important vegetables. Special stress is laid on the trucking industry in North Carolina. Five periods, second term. Required of Freshmen. Assistant Professor REIMER.

44. Landscape Gardening.—This course deals with the planning, arrangement, and care of home grounds, parks, and cemeteries. Special stress is laid on home grounds. It treats especially of lawns, trees and shrubs, flowers and flower-beds, and the arrangement and grouping of these. The campus, city parks, and many beautiful home grounds give exceptional opportunities for this. Three periods, third term. Required of Juniors. Assistant Professor REIMER.

45. Advanced Pomology.—This is an advanced course in the study of fruits. It deals especially with the classification of fruits, as the botany, description, identification, and judging of fruits. It also treats the subject of harvesting and marketing of fruits, as picking,

grading, packing, and shipping. Also selling, fruit unions, and markets. Text-book and lectures. Three periods, first term. Elective for Seniors. Assistant Professor REIMER.

46. Forestry.—This course consists of a study of the fundamentals of forestry. It deals especially with the need, influence, formation, care, and improvement of forests. Also the cutting, use, and handling of forest products. A study is made of the forest trees of greatest importance in America. Three periods, first term. Elective for Seniors. Assistant Professor REIMER.

47. Floriculture.—In this course the important subject of forcing flowers and vegetables is taken up. It deals with the construction, heating, and ventilation of forcing-houses. Also the culture of the leading flowers and vegetables in such houses. Lectures and text-book. Three periods, second term. Elective for Seniors. Assistant Professor REIMER.

48. Plant Breeding.—This course includes a brief review of what has been accomplished in plant breeding and a discussion of the most important problems at the present time. It deals with the principles of plant breeding, as laws of breeding, variation and mutation, heredity, mendelian laws, crossing, selection, origination, and improvement of varieties. The subject is treated from the horticulturist's viewpoint, dealing with fruits, vegetables, and flowers. Lectures, text-book and laboratory work. Three periods, second term. More work can be taken by special arrangement if desired. Elective for Seniors. Assistant Professor REIMER.

49. Horticultural Research.—The last term of the Senior year the student makes a thorough study of modern experimental Horticulture. The leading horticultural investigations of the past and present are studied. A study is also made of all important literature of some horticultural subject. The latter will be chosen with reference to the student's future work. Six periods, third term. Elective for Seniors. Assistant Professor REIMER.

50. General Horticulture.—The course in Horticulture for the short-course students will be just as practical as it is possible to make it. The fall term will be devoted to fruit culture. Instruction will be given in budding, grafting, planting, varieties, preparation of soil, best methods of cultivation, cover crops, fertilizers, manures, pruning, and methods of harvesting and marketing. The instruction will apply especially to North Carolina.

During the winter term the subject of vegetable gardening will be taken up. This includes a discussion of the great trucking industry in North Carolina, possibilities in trucking in the State;

soil for vegetables and how to prepare different soils for vegetables; fertilizers and manures for vegetables; the home fruit and vegetable garden; how to get early and late crops; planting and transplanting; hot-beds and cold-frames; best methods of cultivating these crops; varieties, harvesting, and marketing.

The work during the spring term will be a continuation of the work given during the winter term. A few lectures will also be given on the improvement of home grounds and on forestry. Three periods. Required of one-year students. Assistant Professor REIMER.

BOTANY AND VEGETABLE PATHOLOGY.

Equipment.

Three commodious laboratories and a large recitation and lecture-room are devoted to Botany, Bacteriology, and Vegetable Pathology. A research-room is provided for the use of advanced students. There are also offices for the professor and instructors; a store-room, a dark-room, an incubator-room, and a cold-room. All rooms are supplied with electricity, gas, hot and cold water, and the bacteriological laboratory is, in addition, provided with steam under 80 pounds pressure for purposes of sterilizing. The laboratories are supplied with wall-cases, shelves, herbarium cases, specimen boxes, sterilizers, incubators, microscopes, microtomes, a liberal supply of glassware, and such small utensils as are needed in the prosecution of the work. The incubator-room is fire-proof and is provided with a Weisnegg regulator capable of keeping the temperature of the room practically invariable. The excellent herbarium has been mounted and is now accessible for class use. There is an extensive collection of seeds, both of weeds and cultivated plants, and the most important plant diseases are represented by herbarium and alcoholic specimens. The greenhouse is of great utility as a source of material for seed-testing and for conducting experiments in plant physiology and pathology.

Subjects of Instruction.

55. Elementary Botany.—Weekly lectures, accompanied by laboratory work and reference reading regarding the algæ, fungi, ferns, and seed plants. Morphology is emphasized, and the broad principles of nutrition, reproduction, growth, sex, adaptation, and evolution are illustrated. Particular consideration is given to the fungi and seed plants. The principles of plant-breeding, crossing, pollination, budding, and grafting are taught. The student's knowledge is made his

own through field-work and simple independent investigations. Three periods. Required of Freshmen. Three periods, third term. Required of one-year students. Professor STEVENS and Mr. EASON.

56. Systematic Botany.—The student becomes acquainted with the principal orders and families of plants of North Carolina, as well as with the general problems of plant classification. Attention is given to the grouping of plants into societies and to the study of plant variation and adaptation. Three periods, third term. Required of Sophomores. Professor STEVENS.

57. Plant Diseases.—Lectures and laboratory study of the principal types of plant diseases produced by bacteria, fungi, or physiological derangement, with specific consideration of the methods of treatment. This course emphasizes the principles of plant disease and places the student in a position to employ prophylactic and remedial methods rationally. Three periods, first term. Required of Sophomores. Two periods, third term. Required of one-year students. Professor STEVENS.

58. Plant Diseases (Advanced).—Methods of culture and investigation of plant diseases. This course is intended to prepare the student for original investigation in plant diseases. Two periods. Elective for Seniors. Professor STEVENS.

59. General Bacteriology.—Lectures and laboratory work on the physiology, morphology, and economy of bacteria, with especial reference to home sanitation, disinfection, and to the relation of bacteria to disease in plants and animals. The student becomes familiar in the laboratory with methods of culture and investigation in bacteriology. Two periods. Required of Juniors. Professor STEVENS and Mr. TEMPLE.

60. Bacteriology (Advanced).—A course designed to perfect the technique in bacteriology for those who desire to do original work in bacteriology. Work may be elected in sewage bacteriology, dairy bacteriology, bacterial plant diseases, bacteriology of manure, water, soil, or air. The course is flexible and will be made to fit the requirements of those students electing it. Two periods. For Seniors. Professor STEVENS and Mr. TEMPLE.

ZOOLOGY.

64. Zoology.—The fundamental principles of animal life, together with a knowledge of the structure and classification of animals, are developed by lectures, laboratory work, and text-book. One term is devoted to vertebrates and invertebrates, with only a very brief study

of insects, but including some of the common parasites infecting man and the domestic animals. This course is intended to present a general view of the animal kingdom, and to lay a foundation for the more special subjects that are to follow. Four periods, first term. Required of Sophomores. Mr. SMITH.

ENTOMOLOGY.

65. Economic Entomology.—Elements of insect structure and classification. Injurious insects and remedies: *a.* of orchards; *b.* of small fruits; *c.* of truck and garden crops; *d.* of cotton, corn, tobacco, grains, and grasses; *e.* of forest, shade and ornamental plants; *f.* of barn, mill, and household. Lectures and demonstrations. Three periods, second term. Required of Sophomores. Mr. SMITH.

66. Systematic Entomology.—Systematic study of orders and families of insects, with special reference to structure, classification, life history, and habits. Lecture and laboratory practice. Two periods, first and second terms. For Seniors. Mr. SMITH.

68. Entomology.—This is a short course in which the more noxious insects are studied, with special reference to methods of preventing their injuries. The various insecticides and methods of spraying are also included in this course. Three periods, third term. Required of one-year students. Mr. SMITH.

GEOLOGY.

69. Geology.—Scott's *Introduction to Geology*. In the first part of the course the principles of Dynamical Geology, the forces which have modified and are still modifying the earth, are considered. The results of those forces are seen and studied in the structure of the earth and in the phenomena of volcanoes, earthquakes, faults and folds, crust movements, etc. In the latter part of the course the life-history of the earth as recorded in the rocks is studied. Special attention is given to the commonly occurring rocks and ores, and the main features of the geology of North Carolina form an integral part of the course. The text is supplemented by lectures. Two periods. Required of Seniors.

CHEMISTRY.*

70. Inorganic Chemistry.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the

*For further information, see course in Chemistry.

science. The lectures are illustrated with experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and Doctor WILLIAMS.

71. Inorganic Chemistry.—Laboratory work. Remsen's *Chemical Experiments*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. WILSON.

72. Organic Chemistry.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Three periods. Elective for Seniors. Professor WITHERS.

73. Analytical Chemistry.—Treadwell's *Qualitative Analysis*. A discussion of the principles involved in chemical analysis, together with laboratory work in qualitative analysis. The student is taught to detect the presence of the common metallic elements, as well as of the acids in unknown substances. A considerable portion of the time is given to lectures and recitations upon the principles involved in the different tests, writing reactions, etc. Seven periods, first term. Elective for Seniors. Doctor WILLIAMS.

74. Analytical Chemistry.—Treadwell's *Quantitative Analysis*. Introductory work in gravimetric and volumetric analysis, followed by analyses of the substances most closely related to agriculture, as fertilizers, feeding stuffs, milk, butter, etc. A considerable portion of the time is given to the discussion of the principles involved in the different analytical methods. Seven periods, second and third terms. Elective for Seniors who have taken Course 73. Doctor WILLIAMS.

75. Agricultural Chemistry.—Snyder's *Soils and Fertilizers*, and Jordan's *Feeding of Animals*. A study of the facts obtained by the application of chemistry and chemical methods of investigation to agriculture. The laws of plant and animal nutrition, the economical feeding of plants and animals, and the maintenance of the fertility of the soil are considered from the chemical standpoint. Two periods. Required of Juniors. Professor WITHERS.

76. Industrial Chemistry.—Thorpe's *Outlines of Industrial Chemistry*. A discussion of the processes and principles involved in the more important chemical industries, particularly those whose raw materials are supplied by agriculture or whose products are utilized in agriculture. Three periods. Elective for Seniors. Professor WITHERS.

PHYSICS.*

78. Elementary Physics.—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat, sound; introduction to the study of light. Two periods. Required of Sophomores. Mr. HEWLETT.

METEOROLOGY.

79. Meteorology and Climatology.—This course consists of twenty-six or more lectures and deals with the fundamental principles of the sciences. Instruction is given in the practical as well as the theoretical branches of the subjects. There will be exercises in map-making and forecasting the weather. The class will visit the local office of the United States Weather Bureau at Raleigh, N. C., and considerable time will be devoted to the study of weather instruments, map-making and recording of data. Special emphasis is given the subjects in their relation to agriculture. Some lectures are illustrated with lantern slides. Two periods, second term. For Seniors. Mr. THIESSEN.

DRAWING.†

80. Elementary Mechanical Drawing.—Use of instruments; geometric drawing; elementary projection; isometric and cabinet drawing; drawings made to scale from working sketches of pieces of a machine. Two periods, first term. Required of Juniors. Mr. VAUGHAN.

SHOP-WORK.‡

82. Wood-work.—Use of bench tools; working from drawings, lining, sawing, planing; practice in making simple exercises in wood; elementary exercises in wood-turning. Two periods, second and third terms. Required of Juniors. Mr. CLAY.

83. Forge-work.—Exercises in forging and welding; making exercises of iron; care of forge tools and fires. Two periods, third term. For Juniors. Mr. WHEELER.

MATHEMATICS.

84. Algebra.—Wells' *New Higher Algebra*. Begin with quadratic equations and complete logarithms, embracing ratio and proportion, variation, the progressions, the binomial theorem, series and partial

*For full information in regard to the Department of Physics, see course in Electrical Engineering.

†For full information in regard to shop-work, drawing, and other Mechanical Engineering subjects, see course in Mechanical Engineering.

fractions. Five periods, first term; two periods, second term. Required of Freshmen. Mr. RICHARDSON and Mr. J. A. PARK.

85. Geometry.—Wentworth's *Plane and Solid Geometry*. *Plane Geometry*. Three periods, second term; five periods, third term. Required of Freshmen. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

ENGLISH.

87. Introductory Composition and Rhetoric.—This course in the fundamentals of rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill on grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods. Required of Freshmen. Professor HILL, Doctor SUMMEY, and Mr. BONN.

88. Rhetoric, Criticism, Essays.—The student is taught the essentials of a good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Three periods, first term. Required of Sophomores. Professor HILL, Doctor SUMMEY, and Mr. BONN.

89. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of exercises. Required of Seniors. Two periods, third term. Professor HILL.

90. American Literature.—By means of an introductory text and by much reading, students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Three periods, second and third terms. Required of Sophomores. Professor HILL, Doctor SUMMEY, and Mr. BONN.

91. English Literature.—The development of English literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two hours, second and third terms. Required of Juniors. Two periods, first and second terms. Required of Seniors. Professor HILL.

MODERN LANGUAGES.

The aim of the department is to enable one to use a limited vocabulary for practical purposes in speaking and writing fluently simple sentences, without idiomatic expressions or difficult constructions, and to read scientific works, and to know the meaning of difficult constructions and idiomatic expressions of the foreign language.

A unilingual method is used, based on conversation, humoristic anecdotes, interesting short stories, and scientific articles. The student is taught to think in the foreign language by a direct association of thoughts with foreign expressions, without the medium of English.

The meaning and fluent use of foreign expressions are taught by a direct appeal to real objects, gestures, pictorial illustrations, cognates, context, comparisons, contrasts, and associations, beginning with leading simple questions, and gradually progressing to more advanced ones, frequent repetitions, and a strict adherence to the rule that answers be always given in complete short sentences of the foreign language, and never by "yes," "no," or some other short word alone.

Grammatical and lexical details for the thorough understanding of the lesson are given. The rules are deduced from the examples, and the student is trained in their correct use by interesting connected matter.

Written examinations consist of translations from English into the foreign language, and of questions and answers in the foreign language. No English appears in an examination paper. No time is allowed for hesitancy. Answers are spoken fluently and written rapidly.

Instruction is given three or four hours per week, according to the size and convenience of the classes. When four hours are given, the class receives its instruction twice a week, and each time two hours in succession.

Students may take any one or all of the modern languages during the Junior or Senior year. The work is optional, but credit towards a degree is allowed for the successful completion of the work. Work begun and continued a month may not be dropped without consent of the Faculty.

The languages taught are German, French, and Spanish.

92. German.—Worman's *Modern Languages*, first and second German books; *Studien und Plaudereien*, first and second books; Fischer's *Practical Lessons in German*; *Practical German Grammar*, by Calvin Thomas; *German Reader*, by Fischer; *Scientific Reader*. Doctor RUDY.

93. French.—Worman's *Modern Languages*, first and second French books; Worman's *Grammaire Francaise*; selected short stories of French literature, and scientific readers. Doctor RUDY.

94. Spanish.—Worman's *Modern Languages*, first and second Spanish books; a Spanish grammar to be selected; Fontaine's *Flores de Espana*, and other short stories of Spanish literature; *Modelos para Cartas*. Doctor RUDY.

HISTORY.

95. **English History.**—The text is supplemented by lectures on important periods. Two periods, first term. Required of Juniors. Professor HILL.

BUSINESS LAW AND CIVICS.

96. **Business Law.**—This course includes such subjects as contracts, agency, sales, negotiable paper, insurance, patent rights, etc. The purpose of the course is to teach the general principles of business law. Text-book, Parsons' *Laws of Business*. One period. Required of Seniors. President WINSTON.

POLITICAL ECONOMY AND GOVERNMENT.

97. **Political Economy.**—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. One period. Required of Juniors. President WINSTON.

98. **Advanced Political Economy and Government.**—Two periods. Elective for Seniors. President WINSTON.

MILITARY SCIENCE.

99. **Drill.**—School of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three periods, first term. Two periods, second and third terms. Required of all classes except Seniors. Seniors are to either take drill or two extra hours in some other subject instead. Commandant and Officers of the Battalion.

100. **Tactics.**—Theoretical instruction in Infantry Drill, Field Service, Army Regulations, Guard Duty, and Target Practice. One period. Required of Juniors. Lieutenant YOUNG.

ENGINEERING COURSES.

Four-year Courses in

- II. Civil Engineering.
- III. Mechanical Engineering.
- IV. Electrical Engineering.
- V. Mining Engineering.
- VI. Industrial Chemistry.

Two-year Course in

- IIIa. Mechanic Arts.

COURSE IN CIVIL ENGINEERING.

The aim of the course in Civil Engineering is to give such training as will enable our young men to take an active part in the work of advancing our State along material lines—developing its water-power, building railroads and public highways, constructing water supply and sewerage systems for our towns, etc. The student is given a large amount of practical work in the field and draughting-room, and acquires a fair degree of efficiency in the use of the various surveying instruments, and in draughting. At the same time it is recognized that a successful engineer requires a well-trained mind—one that reasons logically, accurately, and quickly. Therefore a thorough course is given in all those branches of Applied Mathematics which are involved in the solution of engineering problems.

The aim has been to make this pre-eminently a technical course, yet subjects of general culture are included in order to give the student a broader mental training and better preparation for social and business life.

II. The Four-year Course in Civil Engineering, leading to the degree of Bachelor of Engineering.

CIVIL ENGINEERING.

Equipment.

There is a complete equipment of all instruments necessary to civil engineering field-work.

Subjects of Instruction.

101. Descriptive Geometry, Stereotomy.—Text-book, lectures, problems, and completed drawings. Two periods, second and third terms. Required of Sophomores in Civil Engineering. Two periods. Required of Juniors in Civil and in Mining Engineering. Mr. LANG.

102. Graphic Statics.—Determination of stresses in frame structures by graphical methods. Lectures and original problems. Two periods, second and third terms. Required of Juniors in Civil and in Mining Engineering. Professor RIDDICK and Mr. MANN.

103. Surveying.—Land surveying, leveling, elements of triangulation, topographical surveying, road-making. Merriman's *Land Surveying*. Two periods, first term. Required of Juniors in Civil and in Mining Engineering. Mr. LANG and Mr. MANN.

104. Mechanics.—Nature and measurement of forces, moments, conditions of equilibrium, moment of inertia, laws of motion, constraining and accelerating forces, dynamics of a rigid body, momentum and impact, work, power, friction, application of principles to various engineering problems. Three periods. Required of Juniors in Civil and Mining Engineering. Mr. LANG and Mr. MANN.

105. Construction.—Masonry, foundations, railroads, dams, retaining walls, arches, etc. Baker's *Masonry Construction*. Lectures. Two periods, first term. Required of Juniors in Civil and in Mining Engineering. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

106. Railroad Engineering.—Reconnaissance, preliminary and location surveys, cross-sections, compound curves, spirals, etc. Searles' *Field Engineering*. Two periods, second and third terms. Required of Juniors in Civil and in Mining Engineering. Two periods, first term. Required of Seniors in Civil Engineering. Mr. LANG and Mr. MANN.

107. Surveying.—Field-work. Use of instruments, compass, level, transit, and plane table. Practical work in land surveying, topography, leveling, railroad surveying, working up notes, and platting. Two periods. Required of Juniors in Civil and in Mining Engineering. Mr. MANN and Mr. SYKES.

108. Surveying.—Field-work. Triangulation and topography, surveys for sewers, water-works, etc. Two periods, first term. Required of Seniors in Civil Engineering. Mr. MANN and Mr. SYKES.

109. Roofs and Bridges.—Determination of stresses in roof and bridge trusses by the analytical method. Merriman's *Roofs and Bridges*. Original problems. Three periods, first term. Required of Seniors in Civil Engineering. Professor RIDDICK.

110. Bridge Design.—Calculation of stresses, design, specifications, and estimate of cost of a wooden roof truss and a steel highway bridge. Four periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

111. Municipal Engineering.—Text-books, lectures. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

112. Road-building.—Text-book on construction of roads, streets, and pavements. Lectures on practical road-making in North Carolina. Two periods, first term. Required of Seniors in Civil Engineering. Professor RIDDICK.

113. Astronomy.—Determination of Azimuth, Latitude and Longitude, Time. Comstock's *Astronomy for Civil Engineers*. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

114. Reinforced Concrete.—Turneaure & Maurer's *General Theory of Concrete and Steel Construction*. Problems in beams, columns, retaining walls, etc. Two periods, second and third terms. Required of Seniors in Civil Engineering. Mr. MANN and Mr. LANG.

115. Mechanics of Materials.—Study of stresses in beams, columns, etc. Merriman's *Mechanics of Materials*. Three periods, first term. Required of Seniors in Civil and in Mechanical Engineering. Professor RIDDICK.

116. Hydraulics.—Methods of measuring flow of streams, laws governing flow in pipes and conduits, determination of water-power in streams, testing of hydraulic motors. Text-book, Merriman's *Hydraulics*. Three periods, second and third terms. Required of Seniors in Engineering. Professor RIDDICK.

ARCHITECTURE.

125. Architecture.—Building materials, methods of constructing buildings, plans, specifications, bill of materials, estimate of cost, design of buildings. Lectures. Two periods, first term. Required of Sophomores in Civil Engineering. Mr. MANN.

126. **Architectural Drawing.**—Drawings from a building already constructed, design of a dwelling, detail and perspective drawings. Two periods. Required of Sophomores in Civil Engineering. Mr. MANN.

COURSES IN MECHANICAL ENGINEERING AND MECHANIC ARTS.

The regular four-year course in Mechanical Engineering is intended to fit the student for positions of responsibility in engineering work, and also to furnish him with a basis to carry on more advanced engineering studies. It treats of the development and transmission of power, the design and construction of machines, and the calibration and efficiency tests of machinery, boilers, and engines.

The two-year course is offered to students who wish to become machinists, draughtsmen, stationary engineers, or dynamo tenders.

The courses follow closely the methods adopted by the large manufacturing companies, both in drawing-room system and shop methods.

MECHANICAL ENGINEERING.

Equipment.

The drawing and recitation rooms and shops of the Department of Mechanical Engineering are in the Engineering Building. They are of ample size and well lighted, and are arranged to be heated either by the exhaust steam from the engine or by live steam. On the first floor are the steam laboratory, machine shop, forge shop, wood-turning and carpenter shop, office, and library. On the second floor are the recitation-room, two drawing-rooms, and a wood-finishing room. In the office are kept on file various scientific and technical journals, the trade circulars of prominent engineering firms, drawings and photographs of machinery, and tabulated data, as well as a large number of engineering books, the use of which is required.

The department is provided with the necessary apparatus for making boiler and engine tests and for other work of an experimental character. The equipment consists of a two-horse-power engine, a ten-horse-power engine, a one-horse-power gasoline engine (all of which were built by students), a twenty-five-horse-power Woodbury engine, a Wheeler surface condenser, connected with a 4½x6x6 Blake air-pump, an Ericsson hot-air pumping engine, apparatus for making analyses of flue gases, a fuel calorimeter, a water-motor, a

Worthington water-meter, a complete Westinghouse air-brake equipment, a New York air-brake equipment in section, friction brakes, weirs, indicators, planimeters, slide rules, thermometers, calorimeters, gauges, tanks, scales, a Crosby gauge tester, two hydraulic rams, a 15,000-pound Olsen testing machine, and other apparatus for making tests.

The shops are equipped as follows:

The wood-working equipment consists of fifteen double carpenters' benches, which accommodate thirty students, and all necessary tools for each bench: thirty 12-inch turning lathes, each lathe being fully equipped with turning tools: a rip and a cut-off saw bench, foot-feed, with dado attachment: a double revolving rip and cut-off saw bench, with dado attachment: a 20-inch surface planer: a 12-inch hand-jointer or buzz planer: a universal boring machine: a 6 $\frac{1}{2}$ -inch tenoning machine with cope heads: a 6-inch sash and blind sticker: a 34-inch band-saw: a jig-saw: a shaper or edge-moulding machine, with a very complete set of moulding cutters: a chain-mortiser: a dovetailing machine: a 38-inch grindstone: a wood trimmer: an adjustable miter-box: a steam glue-heater, and a large assortment of screw and bar clamps, both iron and wooden.

The forge shop is a well-lighted and ventilated, neatly-paved room, thirty by forty feet. It is equipped with twenty-eight forges, blast being furnished from a Sturtevant blower: two emery and two buffing wheels: a Buffalo Forge Company's hand drill: an overhead exhaust system, operated by a 60-inch Sturtevant exhaust fan, for removing smoke from the fires: anvils and all necessary hand tools.

The machine shop contains a 16-inch Davis and Egan lathe with 10-foot bed, 14-inch Windsor lathe with 5-foot bed, a 13-inch Barnes lathe with 5-foot bed, a 14-inch Putnam lathe with a 4-foot bed, a 14-inch Flather lathe with 6-foot bed, three 14-inch lathes with 6-foot bed (built in the College shops by students), a 26-inch by 44-inch by 12-foot bed McCabe double-spindle lathe, an 18-inch Prentiss shaper, a 24-inch upright Bickford drill press, 32-inch American drill press, a Brown & Sharp universal milling machine with all attachments, a 20-inch by 5-foot Pease planer, one large and one small emery tool-grinding machine, a 6-inch Curtis & Curtis pipe-threading and cutting machine, a Greenwich arbor press and an electric center grinder, a Whiton centering machine, and a Twist drill grinder. The machines have full equipment of chucks, rests, and tools. The benches are well provided with vises.

The tool-room is well equipped with the necessary hand and pipe tools.

The power for the shops is furnished by electric motors.

Subjects of Instruction.

135. Free-hand Drawing.—Work in the use of the pencil: technical sketches of objects, usually parts of a machine: use of instruments, and tracing. Two periods, first term. Required of Freshmen. Four periods, first term. Required of first-year students in Mechanic Arts. **Mr. VAUGHAN.**

136. Elementary Mechanical Drawing.—Geometric drawing, isometric and cabinet drawing, elementary projections, drawings made to scale from working sketches of pieces of a machine. Two periods, second term. Required of Freshmen. Four periods, second term. Required of first-year students in Mechanic Arts. **Mr. VAUGHAN.**

137. Descriptive Geometry Drawing.—Elementary principles; cylinders, cones, and prisms, intersections, development of surfaces. Miscellaneous problems. Two periods, third term. Required of Freshmen. Four periods, third term. Required of first-year students in Mechanic Arts. **Mr. VAUGHAN.**

139. Mechanical Drawing.—Working sketches and drawings of machine parts from the model. Tracing and blue-printing. Elementary machine design. Two periods. Required of Sophomores in Mechanical, Electrical, and Mining Engineering. **Mr. ELLIS.**

140. Machine Design.—Study of the communication of motion by gear wheels, cams, belts, and link-work; automatic feed, parallel and quick return motions. Epicyclic trains. Calculations and working drawings of machine parts, such as fastenings, hangers, couplings, and bearings. Estimating and checking of working drawings. Two periods. Required of Juniors in Mechanical and Electrical Engineering. **Mr. ELLIS.**

141. Machine Design.—Estimating, checking of working drawing, original design. Calculations and working drawings of types of engines, boilers, pumps, condensers, shafting, etc. Two periods, first term. Three periods, second and third terms. Required of Seniors in Mechanical Engineering. **Mr. ELLIS.**

Students are required to stamp their drawings with the College stamp, similar to the practice in the drawing-rooms of the large manufacturing companies. Encouragement is given to original design, especially when carried through the shops to a complete working machine.

146. Wood-work.—Use of bench tools, working from drawings, lining, sawing, planing. Practice in making simple exercises in wood. Elementary exercises in wood-turning. Two periods. Required of Freshmen. Three periods. Required of first-year students in Mechanic Arts. **Mr. CLAY.**

147. Forge-work.—Exercises in working with iron. Welding. Uses and care of forge tools and fires. Two periods. Required of Freshmen. Three periods. Required of first-year students in Mechanic Arts. Mr. WHEELER.

148. Forge-work.—Exercises in working with steel. Tempering. Case-hardening. Two periods, first term. Required of Sophomores in Mechanical, Electrical, and Mining Engineering. Mr. WHEELER.

149. Pattern-making.—Exercises in making patterns and moulds of machine parts. Two periods, second and third terms. Required of Sophomores in Mechanical, Electrical, and Mining Engineering. Mr. CLAY.

150. Machine-shop Work.—Bench and machine work. Exercises in chipping and filing. Exercises in lathe-work, boring, reaming, drilling, planing, milling, and shaper-work. Two periods. Required of Juniors in Mechanical and Electrical Engineering. Three periods. Required of second-year students in Mechanic Arts. Mr. PARK.

151. Machine-shop Work.—Making the parts of some machine, or of an engine. Making tools, such as taps and reamers. Laying out work. Working from drawings, duplicate and interchangeable parts. Working to standard gauges. Three periods. Required of Seniors in Mechanical Engineering. Mr. PARK.

In all practical courses the student's attention is directed to cost of production and its principal elements—time and method.

152. Mechanical Technology.—Classification and uses of wood-working and forging tools and machines. Methods of wood-working and forging. Care of belting and shafting. One period. Required of first-year students in Mechanic Arts. Mr. CLAY.

157. Boilers.—Steam generation: types, care and management: fittings and appliances, corrosion and incrustation: combustion of fuel: boiler power. Two periods, first term. Required of Juniors in Mechanical Engineering, and of Seniors in Electrical and in Mining Engineering. Professor THOMAS.

158. Steam Engines.—Types—simple and compound, and triple expansion, automatic, Corliss, rotary, turbines. Care and management. Indicators, indicated and brake horse-power. Condensers. Two periods, second term. Required of Juniors in Mechanical Engineering, and of Seniors in Electrical and Mining Engineering. Professor THOMAS.

159. Valve Gears.—Plain slide valve, balance valve, Corliss and other form valve gears, link and radial reversing gears. Shaft governors. Bilgram and Zeuner valve diagrams. Two periods, third term. Required of Juniors in Mechanical Engineering, and of Seniors in Mining Engineering. Professor THOMAS.

161. Power Plants.—Mechanical Engineering of power plants. Selection and arrangement of machinery, appliances, piping. Four periods, third term. Required of Seniors in Mechanical Engineering. Professor THOMAS.

162. Gas Engines.—Theory of the gas engine. Various types of gas, gasoline, and oil engines. Brake and indicated horse-power; efficiency. Gas producers. Five periods, first term. Required of Seniors in Mechanical Engineering. Professor THOMAS.

163. Refrigeration.—Various types of ice-making machinery. Compression and absorption systems. Carbon dioxide and compressed-air machines. Three periods, second term. Required of Seniors in Mechanical Engineering. Professor THOMAS.

165. Pumping Machinery.—Direct acting, fly-wheel and duplex and centrifugal pumps. Pumping engines. Water-works machinery. Duty and efficiency. Hydraulic engines. One period, second term. Required of Seniors in Mechanical Engineering. Professor THOMAS.

166. Heating and Ventilation.—Steam, hot water, furnace and blower systems of heating. Heating boilers. Ventilation. Design of heating and ventilating system. One period, second and third terms. Required of Seniors in Mechanical Engineering. Professor THOMAS.

167. Structural Engineering.—The manufacture and uses of different metals—rolled sections used in bridge, structural work, and general engineering. Two periods, second and third terms. Required of Seniors in Mechanical Engineering. Mr. ELLIS.

168. Steam Engineering Laboratory.—Practice in engine running; valve-setting; calibration of instruments; testing gauges and lubricants. Use of indicators and calorimeters. Boiler tests; engine tests. Two periods; required of Seniors in Mechanical Engineering. One period; required of Seniors in Electrical Engineering. A brief course in Surveying is given, so as to enable a student to locate buildings, foundations, line up shafting, engines, and machinery by the use of transit and level. Professor THOMAS and Mr. ELLIS and Mr. VAUGHAN.

169. Applied Mechanics.—Nature and measurement of forces, moments, conditions of equilibrium, moment of inertia, laws of motion, constraining and accelerating forces, dynamics of a rigid body, momentum and impact, work, power, friction, application of principles to various engineering problems. Three periods. Required of Juniors in Mechanical and Electrical Engineering. Mr. VAUGHAN.

171. Mechanical Drawing.—Sketching and drawing of machine parts and machines. Detail working drawings. Tracing and blue-

printing. Two periods. Required of second-year Mechanic Arts students. Mr. VAUGHAN.

172. Mechanical Technology.—Classification and use of hand-tools and machines usually found in the pattern shop, foundry, and machine shop. Materials used and methods of carrying on work in these shops. Practical problems in estimating cost and material required to complete a piece of work; arrangement and sizes of belting, pulleys, and shafting. One period. Required of second-year students in Mechanic Arts. Professor THOMAS.

173. Steam and Steam Machinery.—Descriptive study of the machinery of steam power plants—engines, boilers, condensers, pumps, piping. Care and management. Combustion of fuels. Indicators; indicated, brake and boiler horse-power problems. Two periods. Required of second-year students in Mechanic Arts. Professor THOMAS.

COURSE IN ELECTRICAL ENGINEERING.

Object.—The four-year course is designed for those who wish a thorough and practical training in Electrical Engineering. Only a most thorough training in the fundamental facts and principles of the science of electricity and magnetism will be satisfactory for a branch of engineering which is advancing so rapidly. A great deal of attention is, therefore, paid to good text-book work, and as soon as the first principles of the science are mastered by the student he is given a series of experiments in which careful measurements with exact instruments are made.

The department, as can be seen from the list of apparatus, is well equipped with dynamos, electric motors, and testing instruments for experimental work and for investigation of problems in electrotechnics. During the Senior year a course in designing the various electrical machines is given.

PHYSICS.**Equipment.**

The recitation-rooms and laboratories of the Department of Physics are situated in the basement of the principal building. They are spacious and well lighted.

The equipment consists of apparatus for illustrating the principles of physical science and for instruction and practice in experiments, measurements, and tests.

Subjects of Instruction.

176. Elementary Physics.—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound, and light. Text-book used: Carhart & Chute's *High School Physics*. Four periods. Required of Freshmen in Engineering courses. Mr. HEWLETT.

177. Elementary Lessons in Electricity and Magnetism.—Text-book used: *Elementary Electricity and Magnetism*, by D. C. & J. P. Jackson. Two periods. Required of Sophomores. Professor MOORE.

178. Physical Laboratory.—Practice in handling units in British and metric systems. Experiments in mechanics, illustrating addition and composition of forces, the lever, the inclined plane, the pendulum, density, and specific gravity, and Boyle's law. Experiments in heat, sound, and light, covering the following subjects: Thermometer calibration, calorimetry, hygrometry, expansion, wave lengths of sounds, laws of strings, laws of lenses and mirrors, refraction, photometry, and spectroscopy. Text-book used: Cheston-Dean-Timmerman's *Laboratory Course in Physics*. One period. Mr. SPRAGUE.

179. Physical Laboratory.—Continuation of Course 178. Elementary experiments in magnetism. The electric circuit. Primary batteries. Measurement of electro-motive force, current, and resistance. Telegraph and telephone circuits. Required of Sophomores in Electrical, Mining, and Mechanical Engineering, and in Chemistry. Mr. HEWLETT.

ELECTRICAL ENGINEERING.**Equipment.**

For this course two laboratories are equipped: one known as the instrument laboratory, in which measuring instruments and apparatus are kept, and the other as the dynamo laboratory, containing generators, motors, transformers, switchboards, etc. The instrument

laboratory is provided with direct and alternating current voltmeters, ammeters, and wattmeters, Wheatstone bridges, galvanometers, condensers, etc. It is supplied from the central power-house with direct and alternating currents of any voltage, phase, or frequency for use in checking instruments and making measurements. The dynamo laboratory is a small one-story brick building 30 x 50 feet, and is equipped with a 3-phase synchronous motor coupled directly to a line shaft arranged to drive small generators, an 11.5 K. W. 110-volt Westinghouse D. C. generator, 20 K. W. 2-phase 110-volt Lincoln alternator, one 6-light T. H. arc-lighting generator, one 1-horse-power Sprague motor, one 8 K. W. 110-volt Siemens & Halske generator, one 2-horse-power 3-phase 110-volt G. E. induction motor, one 2 K. W. 110-volt LaRoche single-phase alternator, two $2\frac{1}{2}$ K. W. 110-volt 3-phase generators, two $2\frac{1}{2}$ K. W. 125-volt compound wound D. C. generators with series coils for use as series motors or generators, one $2\frac{1}{2}$ K. W. 110-volt A. C. rotary converter, one 30-ampere Hewitt mercury rectifier. The laboratory also contains constant potential and constant current transformers, condensers, circuit-breakers, etc., and a switchboard well equipped with voltmeters, ammeters, frequency indicators, etc.

The central power station is also available for student use, the equipment consisting in a 75 K. W. 600-volt 3-phase Crocker-Wheeler generator coupled to a Skinner engine, two 50 K. W. 300-volt 3-phase Crocker-Wheeler generators coupled to a 150-horse-power De Laval steam turbine, one 9.5 K. W. 125-volt Westinghouse D. C. exciting generator, and switchboard provided with meters, instrument transformers, oil circuit-breakers, wattmeters, synchroscope, etc.

The department possesses a small library of standard books on all branches of Physics and Electrical Engineering.

183. Electrical Engineering.—The magnetic circuit. Electrical measurements. Electro-magnetic induction. Storage batteries. Arc-lighting. Incandescent lighting. Interior wiring. Dynamos and dynamo design. Direct current motors. Management and operation of dynamos and motors. Text-books used: *International Correspondence School Pamphlets* and *Crocker-Wheeler's Management of Electrical Machinery*. Five periods. Required of Juniors in Electrical Engineering. Two periods. Required of Juniors in Mechanical Engineering. Professor MOORE.

184. Electrical Engineering.—Practice in calculating circuits containing resistance, inductance, and capacity. Alternators. Design of alternating current apparatus. Power transformation and measurement. Line construction. Switchboards and appliances. Electric

power stations. Electric car equipment. Motors and controllers. Line and track. Line calculations. Multiple unit systems. Theory of operation and design of transformers, induction motors, A. C. series motors, and repulsion motors. Text-books used: Hay's *Alternating Currents* and *International Correspondence School Pamphlets*. Five periods. Required of Seniors in Electrical Engineering. Professor MOORE.

186. Electrical Engineering Laboratory.—Practice in varying the ranges of ammeters and voltmeters. Various methods of measuring resistance. Permeability and hysteresis tests. Practice with direct current generators and motors. Characteristic curves. Efficiency tests. Two periods. Required of Juniors in Electrical Engineering. Mr. ADAMS.

190. Electrical Engineering Laboratory.—Senior year. Coupling D. C. generators for parallel, series and three-wire operation. Stray power tests. Kapp's pumping back method. Heat test of a D. C. dynamo. Series and parallel A. C. circuits. Plating vector diagrams. Experiments with A. C. generators, induction and synchronous motors, transformers, etc. Text-book used: Sever & Townsend's *Laboratory and Factory Tests*. Two periods. Required of Seniors in Electrical Engineering. Mr. ADAMS.

191. Electrical Design.—Design of magnets, dynamos, alternators, induction motors, and transformers. Two periods. Required of Seniors in Electrical Engineering.

COURSE IN MINING ENGINEERING.

The course in Mining Engineering is intended to give the student the preliminary training necessary to enable him to enter upon a career in mining. To this end he is given instruction in English, History, Political Economy, and Mathematics, which are fundamental to the more technical studies and to the greatest usefulness as a citizen. Instruction in Physics and Chemistry, Mineralogy and Geology, Surveying, Shop-work, Drawing, Machinery, and Steam affords the scientific and engineering knowledge upon which the successful work of the miner must depend. The more technical portion of the instruction includes ore dressing, metal-working, ventilation, drainage, and illumination of mines.

MINING AND METALLURGY.

206. **Mining.**—Lectures on methods of mining, including prospecting, sinking, sloping, hoisting, pumping, and ventilating; the location of mining claims, mine fires, fire-damp and dust explosions; inundations; rescue and relief of men. Four periods, second and third terms. Required of Seniors in Mining.

207. **Ore Dressing.**—Furnishing products for metallurgical treatment. Lectures on concentrating machinery and concentrating and enriching ores by mechanical means. Four periods, first term. Required of Seniors in Mining.

208. **Metallurgy.**—Introductory: combustion, calorific calculations, fuels, refractory materials, furnaces, etc. Iron and steel: the various iron and steel processes, metallography, heat treatment, mechanical treatment, chemistry. Copper: roasting, smelting, refining, wet and electrolytic processes. Gold: stamp milling, amalgamation, cyanide and chlorination processes. The metallurgy of lead and the lesser metals. Two periods, second and third terms. Required of Seniors in Mining.

209. **Assaying.**—Ricketts & Miller's *Notes on Assaying*. Lectures and laboratory practice in the crushing and sampling of ores; the assaying of gold, silver, lead, and other ores; corrected assays; bullion assays; extraction tests. Two periods, second and third terms. Required of Seniors in Mining.

GEOLOGY AND MINERALOGY.

211. **Geology.**—Scott's *Introduction to Geology*. In the first part of the course the principles of Dynamical Geology, the forces which have modified and are still modifying the earth, are considered. The results of these forces are seen and studied in the structure of the earth and in the phenomena of volcanoes, earthquakes, faults and folds, crust movements, etc. In the latter part of the course the life-history of the earth as recorded in the rocks is studied. Special attention is given to the commonly occurring rocks and ores, and the main features of the geology of North Carolina form an integral part of the course. The text is supplemented by lectures. Two periods. Required of Seniors in Mining.

212. **Mineralogy.**—Moses & Parsons' *Mineralogy*. Descriptive and determinative mineralogy: blowpipe analysis and the study of the more important minerals, their properties, uses, and methods of determination. Recitations and laboratory practice. Four periods, first term. Required of Seniors in Mining.

COURSES IN INDUSTRIAL CHEMISTRY.

In harmony with the general purposes for which the College was founded, the course in Chemistry is arranged to prepare young men for careers in the analytical or the operating departments of the various chemical industries. To this end the training given in general, organic, and analytical chemistry is supplemented by instruction in technical chemical analysis and in the applied chemical subjects bearing more directly on the course the student has selected. The fundamental principles of engineering, machinery, etc., which are almost indispensable to the successful management of chemical plants, are taught, together with the cultural studies included in the other courses.

Raleigh as a Chemical Center.

There are in the city of Raleigh and its vicinity several manufacturing plants to which, through the courtesy of the owners, the students in chemistry, in company with the teaching staff of the department, make visits each year. These include plants for the manufacture of illuminating gas, sulphuric acid, fertilizers, and ice; for the extraction of cotton-seed oil; and for the dyeing of cotton goods.

The chemical laboratories of the North Carolina Department of Agriculture and of the North Carolina Agricultural Experiment Station afford the student an opportunity to keep in touch with the methods of research in this department of agricultural science.

The State Museum is open to the public each day, and among other things contains a very excellent collection of the State's minerals, ores, and building stones.

Chemical Equipment.

The laboratories of general and analytical chemistry are located in the main building of the College, and are well furnished. The tables are of yellow heart-pine with oak tops. Each student is provided with water, gas, all necessary reagents, ample working space, together with lockers for the storage of apparatus, etc. The quantitative laboratory is located on the first floor and will accommodate thirty-two students. The laboratory for introductory chemical work is in the basement and will accommodate one hundred and eighteen students.

The chemical library is well supplied with reference books. It receives the leading chemical journals and owns complete sets of many of the most important of them.

Graduates in Chemistry.

The chemical graduates of the College are engaged in the following lines of chemical work: Manufacture of illuminating gas, manufacture of sulphuric acid, manufacture of fertilizers, manufacture of tobacco products, refining and testing of oils, metallurgy of iron, metallurgy of copper, dyeing of cotton goods, in seven agricultural experiment stations, in State departments of agriculture, and in teaching chemistry. These are employed in North Carolina and eleven other States.

VI. The Four-year Course in Industrial Chemistry, leading to the degree of Bachelor of Science.

Freshman Year.

CHEMISTRY.

216. **Inorganic Chemistry.**—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and Doctor WILLIAMS.

217. **Inorganic Chemistry.**—Laboratory work. Remsen's *Chemical Experiments*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. WILSON.

218. **Organic Chemistry.**—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Three periods. Required of Juniors in Chemistry. Professor WITHERS.

220. **Analytical Chemistry.**—Treadwell's *Qualitative Analysis*. A discussion of the principles involved in chemical analysis, together with laboratory work. The student is taught to detect the presence of the common metallic elements, as well as that of the acids, in unknown substances. Seven periods, first term. Required of Juniors in Chemistry. Doctor WILLIAMS.

226. **Analytical Chemistry.**—Treadwell's *Quantitative Analysis*. Gravimetric and volumetric analysis, special attention being given to the analysis of substances of technical importance. Seven periods, second and third terms. Required of Juniors in Chemistry. Seven periods. Required of Seniors in Chemistry. Doctor WILLIAMS.

228. **Organic Chemistry.**—Laboratory work. Gattermann's *Practical Methods of Organic Chemistry*, translated by Shober. The typical transformations and syntheses of the aliphatic and aromatic groups are taken up. The student thus becomes familiar with the reactions and properties of the more important organic compounds. One of each of the more important classes of dye-stuffs is prepared and the properties studied. Four periods. Required of Seniors in Chemistry. Doctor SYME.

233. **Industrial Chemistry.**—Thorpe's *Outlines of Industrial Chemistry*. A discussion of the processes and principles involved in the more important chemical industries. A discussion of the materials of engineering. Three periods. Required of Seniors in Chemistry. Professor WITHERS.

BOTANY.

241. Elementary Botany.—Weekly lectures, accompanied by laboratory work and reference reading, regarding the algæ, fungi, ferns, and seed plants. Morphology is emphasized, and the broad principles of nutrition, reproduction, growth, sex, adaptation, and evolution are illustrated. Particular consideration is given to the fungi and seed-plants. The principles of plant-breeding, crossing, pollination, budding, and grafting are taught. The student's knowledge is made his own through field work and simple independent investigations. Three periods. Required of Sophomores in Chemistry. Professor STEVENS and Mr. EASON.

BACTERIOLOGY.

251. General Bacteriology.—Lectures and laboratory work on the nature, physiology, morphology, and economy of bacteria, with especial reference to home sanitation, disinfection, and to the relation of bacteria to disease in plants and animals. The student becomes familiar in the laboratory with methods of culture and investigation in bacteriology. Two periods. Required of Juniors in Chemistry. Professor STEVENS and Mr. TEMPLE.

252. Bacteriology, Advanced.—A course designed to perfect the technique in bacteriology for those who desire to do original work in bacteriology. Work may be elected in sewage bacteriology, dairy bacteriology, bacterial plant diseases, bacteriology of manure, water, soil, or air. The course is flexible and will be made flexible to fit the requirements of those students taking it. Two periods. Required of Seniors in Chemistry. Professor STEVENS and Mr. TEMPLE.

MATHEMATICS.

While the subject of Mathematics is presented in such a manner that the student obtains a thorough working knowledge of those principles which he needs in his Engineering Courses, yet, at the same time, it is not the purpose to subordinate the general theory of Mathematics to the practical side. The work consists of recitations, written exercises and lectures, the scope being quite sufficient for the needs of the institution.

261. Arithmetic.—Milne's *Standard Arithmetic*. Begin with decimal fractions and complete the subject. Five periods, first term. Required of first-year students in Mechanic Arts. Mr. RICHARDSON and Mr. SYKES.

262. Algebra.—Wells's *New Higher Algebra* up to quadratic equations. Five periods, second and third terms. Required of first-year students in Mechanic Arts. Mr. RICHARDSON and Mr. SYKES.

263. Algebra.—Wells's *New Higher Algebra*. Begin with quadratic equations and complete logarithms, embracing ratio and proportion, variation, the progressions, the binomial theorem, series and partial fractions. Five periods, first term; two periods, second term. Required of Freshmen and second-year students in Mechanic Arts. Mr. RICHARDSON and Mr. J. A. PARK.

264. Geometry.—Wentworth's *Plane and Solid Geometry*. Plane Geometry. Three periods, second term; five periods, third term. Required of all Freshmen and second-year students in Mechanic Arts. Professor YATES, Mr. RICHARDSON, and Mr. J. A. PARK.

265. Solid Geometry.—Required of Sophomores. Five periods, first term. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

266. Advanced Algebra.—Wells's *New Higher Algebra*. Compound interest and annuities, permutations, combinations, continued fractions, general theory of equations, and the solution of higher equations, etc. Required of Sophomores. Three periods, second term. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

267. Trigonometry.—Wells's *Plane and Spherical Trigonometry*. Plane Trigonometry. Solution of plane triangles, triangulation, etc. Spherical Trigonometry. Solution of spherical triangles. Required of Sophomores. Two periods, second term; five periods, third term. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

268. Analytical Geometry.—Nichols's *Analytical Geometry*. Loci of equations, straight line, circle, parabola, ellipse, hyperbola, a discussion of the general equation of the second degree, higher plane curves and geometry of three dimensions. Four periods, first and second terms. Required of Juniors in Engineering. Professor YATES.

269. Differential and Integral Calculus.—Osborne's *Elements of Calculus*. A thorough treatment of the fundamental principles and derivation of formulæ: applications to various problems, such as expansion into series, evaluation of undeterminate forms, maxima and minima, radius of curvature, lengths of curves, areas, volumes, etc. Four periods, third term. Required of Juniors. Three periods, first term. Required of Seniors. Professor YATES.

ENGLISH.

271. English Composition.—A drill on the forms of the language, the correct relation of words, the sentence, the paragraph. Daily written exercises. Three periods. Required of first-year students in Mechanic Arts. Doctor SUMMEY and Mr. BONN.

272. Introductory Composition and Rhetoric.—This course in the fundamentals of Rhetoric is made thoroughly practical. Students

write instead of studying about how to write. The written work is accompanied by a steady drill on grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods a week. Required of Freshmen. Professor HILL, Doctor SUMMEY, and Mr. BONN.

273. Rhetoric, Criticisms, Essays.—The student is taught the essentials of a good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Three periods, first term. Professor HILL, Doctor SUMMEY, and Mr. BONN.

274. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of exercises. Required of Seniors. Two periods, third term. Professor HILL.

275. American Literature.—By means of an introductory text and by much reading, students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Three periods, second and third terms. Required of Sophomores. Professor HILL, Doctor SUMMEY, and Mr. BONN.

276. English Literature.—The development of English Literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two periods, third term. Required of Juniors. Two periods, first and second terms. Required of all Seniors. Professor HILL.

MODERN LANGUAGES.

The aim of the department is to enable one (*a*) to use a limited vocabulary for practical purposes in speaking and writing fluently simple sentences without idiomatic expressions or difficult constructions, and (*b*) to read scientific works and to know the meaning of difficult constructions and idiomatic expressions of the foreign language.

A unilingual method is used, based on conversation, humoristic anecdotes, interesting short stories, and scientific articles. The student is taught to think in the foreign language by a direct association of thoughts with foreign expressions without the medium of English.

The meaning and fluent use of foreign expressions are taught by a direct appeal to real objects, gestures, pictorial illustrations, cognates, context, comparisons, contrasts, and associations, beginning with leading simple questions and gradually progressing to more ad-

vanced ones, frequent repetitions, and a strict adherence to the rule that answers be always given in complete short sentences of the foreign language and never by "yes," "no," or some other short word alone.

Grammatical and lexical details for the thorough understanding of the lesson are given. The rules are deduced from the examples, and the student is trained in their correct use by interesting connected matter.

Written examinations consist of translations from English into the foreign language and of questions and answers in the foreign language. No English appears in an examination paper. No time is allowed for hesitancy. Answers are spoken fluently and written rapidly.

Instruction is given three or four hours per week, according to the size and convenience of the classes. When four hours are given, the class receives its instruction twice a week and each time two hours in succession.

Students may take any one or all of the modern languages during the Junior or Senior year. The work is optional, but credit towards a degree is allowed for the successful completion of the work. Work begun and continued a month may not be dropped without consent of the Faculty.

The languages taught are German, French and Spanish.

277. German.—Worman's *Modern Languages*, first and second German books; *Studien und Plaudereien*, first and second books; Fischer's *Practical Lessons in German*; *Practical German Grammar*, by Calvin Thomas; *German Reader*, by Fischer; *Scientific Reader*. Doctor RUDY.

278. French.—Worman's *Modern Languages*, first and second French books; Worman's *Grammaire Francaise*; selected short stories of French literature, and scientific readers. Doctor RUDY.

279. Spanish.—Worman's *Modern Languages*, first and second Spanish books; a *Spanish Grammar* to be selected; *Fontaine's Flores de Espana*, and other short stories of Spanish literature; *Modelos para Cartas*. Doctor RUDY.

HISTORY.

283. English History.—The first term of the Junior year is devoted to a study of English history. The text is supplemented by lectures on important periods. Two periods, first and second terms. Required of Juniors. Professor HILL.

BUSINESS LAW AND CIVICS.

295. Business Law.—This course includes such subjects as contracts, agency, sales, negotiable paper, insurance, patent rights, etc. The purpose of the course is to teach the general principles of business law. Text-book: *Parsons' Laws of Business*. One period. Required of Seniors. President WINSTON.

POLITICAL ECONOMY AND GOVERNMENT.

297. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. Required of Juniors. One period. President WINSTON.

298. Advanced Political Economy and Government.—Two periods. Elective for Seniors. President WINSTON.

MILITARY SCIENCE.

299. Drill.—School of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours. Required of all classes except Seniors. Elective for Seniors. Commandant and Officers of the Battalion.

300. Tactics.—Theoretical instruction in Infantry Drill, Field Service, Army Regulations, and Guard Duty. One period. Required of Juniors. Lieutenant YOUNG.

TEXTILE COURSES.

- VIII. The Four-year Course in Textile Industry.
- VIIIa. The Two-year Course in Textile Industry.
- VIIIb. Special Ten Weeks' Course in Carding and Spinning.
- VIIIc. Special Ten Weeks' Course in Weaving and Designing.

THE TEXTILE DEPARTMENT.

The Textile Department is located in a new building recently erected for its use. The instruction given in this department is in the theory and practice of cotton manufacturing. The building, which is a typical cotton mill, is fully equipped with all the necessary machinery for manufacturing cotton yarns and fabrics from the bale to the finished product. The student is taught the theory of cotton spinning, weaving, designing, and dyeing. In connection with the theory, he learns the practical operation of the cotton machinery used in carrying on the different processes. Further, he learns such essential practical details as enable him to adjust and fix the machinery so as to produce the proper results. As a result of this training, each student produces for himself cotton yarns of different numbers, cotton fabrics of different kinds from his own designs and choice of colors.

TEXTILE INSTRUCTION.

In this department three courses of instruction are offered, the four-year course leading to the degree of Bachelor of Engineering, the two-year course and the ten-weeks' winter course in carding and spinning, weaving, and designing.

Four-year Course.

The four-year course offers complete facilities for full instruction in all branches of cotton-mill work. Practical training in textile work begins in the Freshman year and forms a part of the work in each of the following years. The combination of practical with theoretical training is begun in the Sophomore year and continues in the Junior and Senior years. The theoretical work is directly related to the practical work going on, and this combination offers the best means for studying cotton-mill work and its operations.

Two-year Course.

The two-year course is offered to mature students who cannot spend the time required for the four-year course, or who have had considerable practical experience in the mill and wish to avail themselves of our facilities for giving special instruction in textile work.

Special Ten Weeks' Courses.

Special ten weeks' courses are offered to practical mill men in carding and spinning, weaving and designing. These courses are given during the winter of each year, beginning with the opening of College in January and lasting until the middle of March. They aim to meet a demand from cotton-mill superintendents, overseers, and practical men for special instruction in the subjects named.

The textile instruction given is of a practical nature and covers the entire ground of cotton manufacturing. Its object is to prepare the student for a useful career in this industry. There is a demand from the mills in this and other States for young men technically trained in the manufacture of cotton goods, especially of the finer grades. That the graduates are meeting with success in this industry is shown by the positions held by them. Among these are president, secretary and treasurer, manager, superintendent, designer, overseer of weaving, mill architect, machinery salesman. In fact, the graduates have gone into almost every branch of cotton manufacturing and have met with success. All have received the same training. The point to which each has advanced has depended upon the ability to deal with the general problems of manufacturing.

TEXTILE BUILDING AND EQUIPMENT.

The Textile Building is located on the west campus. It is a two-story brick building one hundred and twenty-five by seventy-five feet, with a basement. Throughout, its construction is similar to a cotton mill, being an illustration of standard construction in this class of buildings. The basement is fitted up with a laboratory and classroom for instruction in dyeing and with dyeing machinery. On the first floor are located the hand and power looms and the necessary warp-preparation machinery. The carding and spinning machinery is located on the second floor. Electricity is used as motive power, the machinery of each department in the building being driven by a separate motor. The machinery equipment consists of the latest types of cotton-mill machinery manufactured by American builders. The following is a list of the machines and their makers:

Carding Department.

Opening-room.—One combination opener and breaker lapper, made by Kitson Machine Co., Lowell, Mass. One 40-inch single beater finisher lapper, with patent carding beater, made by Kitson Machine Co., Lowell, Mass.

Carding-room.—One 40-inch revolving flat card, 112 flats, with coiler, made by Mason Machine Works, Taunton, Mass. One 40-inch revolving flat card, 110 flats, with coiler, made by Whitin Machine Works, Whitinsville, Mass. One 40-inch revolving flat card, 110 flats, with coiler, made by Saco and Pettie Machine Shops, Newton Upper Falls, Mass. One single railway head, with coiler, leather rolls, made by Whitin Machine Works, Whitinsville, Mass. One drawing frame, four deliveries, leather rolls, made by Whitin Machine Works, Whitinsville, Mass. One railway head, with coiler, metallic rolls, and improved evener motion, made by Saco and Pettie Machine Shops, Newton Upper Falls, Mass. One drawing frame, four deliveries, metallic rolls, made by Saco and Pettie Machine Shops, Newton Upper Falls, Mass. One sliver lap machine, one ribbon lap machine and one six-head combing machine, made by Whitin Machine Works, Whitinsville, Mass. One 36-spindle slubber for $11 \times 5\frac{1}{2}$ -inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I. One 48-spindle intermediate roving frame for $9 \times 4\frac{1}{2}$ -inch bobbin, made by Saco and Pettie Machine Shops, Biddeford, Me. One 64-spindle fine roving frame for $7 \times 3\frac{1}{2}$ -inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I. One 80-spindle jack roving frame for $6 \times 2\frac{1}{2}$ -inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I.

Spinning Department.

Spinning-room.—One 64-spindle spinning frame for warp; one 80-spindle spinning frame for filling, made by Whitin Machine Works, Whitinsville, Mass. One 80-spindle spinning frame for warp, one 80-spindle spinning frame for filling, made by Mason Machine Works, Taunton, Mass. One 80-spindle spinning frame for warp, one 80-spindle spinning frame for filling, made by Fales & Jenks Machine Co., Pawtucket, R. I. One 64-spindle spinning frame for warp, one 64-spindle spinning frame for filling, made by Saco and Pettie Machine Shops, Biddeford, Me. One 48-spindle spinning frame, combination build, made by D. A. Tompkins Co., Charlotte, N. C. One 240-spindle mule spinning frame, $1\frac{1}{2}$ -inch gauge, made by Asa Lees & Co., Oldham, England.

Spooling, Twisting, and Winding.—One 40-spindle spooler, made by Draper Company, Hopedale, Mass. One 40-spindle spooler, made by Whitin Machine Works, Whitinsville, Mass. One 32-spindle spooler, made by Easton & Burnham, Pawtucket, R. I. One 40-spindle spooler, made by D. A. Tompkins Co., Charlotte, N. C. One 48-spindle twister, made by Whitin Machine Works, Whitinsville, Mass. One 100-spindle wet twister, made by Draper Company, Hopedale, Mass. One 48-spindle twister, one-half for wet, one-half for dry twisting, made by Fales & Jenks Machine Co., Pawtucket, R. I. One 50-spindle reel, one-half live, one-half dead spindles, made by D. A. Tompkins Co., Charlotte, N. C. One 40-spindle reel, made by Draper Company, Hopedale, Mass. One 6-spindle universal winding machine, made by Universal Winding Co., Boston, Mass. One section warper, 400 ends, made by Draper Company, Hopedale, Mass.

Weaving Department.

Warp Preparation.—One 12-spindle bobbin-winding machine, made by Jacob K. Altemus, Philadelphia, Pa. One beaming machine, made by Lewiston Machine Co., Lewiston, Me. One beaming machine, complete, made by The T. C. Entwistle Co., Lowell, Mass.

Looms.—One Northrop-Draper print-cloth loom; two Northrop-Draper sateen loom; one Northrop-Draper loom with 20-harness dobby, made by Draper Company, Hopedale, Mass. Three high-speed sheeting looms, made by Kilburn & Lincoln, Fall River, Mass. One sheeting loom, one 12-harness dobby loom and one 24-harness dobby loom, made by Whitin Machine Works, Whitinsville, Mass. One print-cloth loom, one 2 x 1 box loom, one 24-harness dobby loom, made by Mason Machine Works, Taunton, Mass. One 4-harness twill loom, made by Lowell Machine Shop, Lowell, Mass. One Crompton 4 x 1 box gingham loom, one Crompton 4 x 1 box loom with 20-harness dobby, one Crompton single-box loom with 400-hook Jacquard machine, one Knowles Gem loom with 4 x 4 box, one Stafford single-box loom with 20-harness dobby, made by Crompton & Knowles Loom Works, Worcester, Mass. One 2 x 1 box loom with 600-hook Jacquard machine, made by Joseph Battles Manufacturing Co., Lawrence, Mass. One 4 x 1 box table-cover loom with 624-hook Halton Jacquard Machine, made by Crompton-Thayer Loom Co., Worcester, Mass. Ten 4 x 4 box hand looms with 30-harness witch-heads for narrow fabrics. Two 4 x 4 box hand looms with 400-hook and 600-hook Jacquard machines, from Thos. Halton's Sons, Philadelphia, Pa.

Dyeing Department.

The Dyeing Department is located in the basement of the Textile Building, and consists of an experimental dyeing laboratory with desk room sufficient for thirty students, a lecture-room, a stock-room, an office, and a room seventy by fifty feet which is fitted up to give instruction in practical dye-house work.

The dyeing laboratory is well fitted up with appropriate work tables, and all the necessary apparatus for doing experimental dyeing, dye-testing, color-matching, the testing of dyed samples to light, acids, and alkalies, etc., as well as carrying out the various chemical operations necessary in dyeing. The dye-house is equipped with the proper dyeing machinery needed in the dyeing of large quantities of material, and the giving of practical instruction in boiling out, bleaching, dyeing of raw stock, cops, skeins, warps, and piece goods.

The department has a large collection of dyestuffs and color cards. Through the kindness of the various dyestuff dealers and manufacturers the department is regularly supplied with all new dyestuffs and color cards as soon as they are put on the market, thus affording the student ample opportunity to become familiar with the latest methods and products for commercial work. The department is indebted to the following firms for donations of dyestuffs and chemicals:

Badische Company, 128 Duane St., New York, samples Indanthrene dyestuffs and color cards.

A. Klipstein & Co., 122 Pearl St., New York, 2 pounds aniline oil, 2 pounds aniline salt.

Farbenfabriken of Elberfeld Co., 66 Lafayette St., New York, 5 pounds Malapale soap, large collection of dyestuffs and color cards.

Berlin Aniline Works, New York, samples of dyestuffs and color cards.

Power and Power Transmission.

One 20-horse-power 3-phase 550-volt motor, made by General Electric Co., for driving carding and spinning machinery.

One 15-horse-power 3-phase 550-volt motor, made by General Electric Co., for driving weaving machinery.

One 10-horse-power 3-phase 550-volt motor, made by Fairbanks, Morse Co., for driving dyeing machinery.

Pulleys, shaftings, hangers, and couplings, made by Jones & Laughlin Co., Ltd., Pittsburg, Pa.

Belting, made by Fayerweather & Ladew, New York City, and Maloney-Bennett Belting Co., Chicago, Ill.

Heating Plant.

Steam Coils and Blowing Fan, made by B. F. Sturtevant Co., Boston, Mass.

Description of Subjects.

301. Carding and Spinning.—Lectures and recitations: practice in operating card and spinning room machinery. Cotton: classifying the plant; its growth; varieties: ginning; baling and marketing the raw staple. Cotton at the mill: selecting and mixing. Openers and lap-pers: cards; sliver lap machines; ribbon lap machines; combers; railway-heads; drawing-frames; slubbers; intermediate; speeders; jacks. Ring spinning-frames and mules. Spoolers. Twisters; reels; cone-winders. Construction and functions of each machine: making the various calculations. Drafts: speed of parts; production. Producing yarns of different counts, single and ply. Testing yarns for breaking strength and elasticity. Text-books: *Cotton Mill Processes and Calculations*, by Tompkins; *Cotton Spinning*, by Nasmith. Required of Freshmen, Sophomores, Juniors, and Seniors, and of first and second year students. Assistant Professor PARKER.

302. Weaving.—Lectures and practice in warp preparation, operating and fixing looms, cloth-finishing machinery. Warp preparation: pin frame warper; section warper; beam warper; construction of beam warper, stop motion, measuring motion, creel; pattern warp making; long and short chain beamers. Slashing; steam cylinder slasher; hot-air slasher; construction of slasher; creel; cylinder; immersion roll; squeeze rolls; drying fan; separator rolls; winding yarn on beam; cone drive; slow motion; measuring and cut marking motion. Sizing; construction of size kettle; size mixing and boiling; division of sizing; ingredients; value of ingredients; sizing receipts for light, medium, and heavy sizing. Loom-mounting: reeds and harnesses; drawing in, and putting warps in loom. Looms: hand looms

and power looms; construction of plain loom; principal movements in weaving; let-off and take-up motions; filling stop motion; warp stop motion. Cams and their construction. Magazine looms, construction and advantages. Drop box looms: chain building for box looms; changing boxes to have easy-running looms; construction and value of multipliers; timing and fixing box motions. Pick and pick-looms. Box-chain, and multiplier-chain building, arrangement of colors in boxes to give easy-running loom. Ball and shoe-pick motion. Construction and fixing of head motion. Dobby, single and double index; construction and fixing of dobbie; extra appliances necessary for weaving leno, towel, and other pile fabrics. Value of easers; half motion; and jumper attachment for leno. Springs and spring-boxes. Pattern chain building. Jacquard: single and double lift; construction and tie-up. Weave-room calculations; speed and production calculations; relative speed of looms; counts of cotton harness. Finishing: inspection of cloth; singeing and brushing; calendering, tentering; folding and packing for the market. Equipment necessary for warp preparation, weaving, finishing; approximate cost of production of fabrics in the different processes. Text-book: *Weaving, Plain and Fancy*, by Nelson. Required of Freshmen, Sophomores, Juniors, and Seniors, and of first and second year students. Professor NELSON and Mr. STEED.

303. Textile Designing.—Lectures and practice in designing. Method of representing weaves on design paper. Foundation weaves: plain; twill; satin. Ornamentation of plain weave; color effects on plain weave. Derivative weaves; plain and fancy basket weaves; warp and filling rib weaves. Broken twills; curved twills; corkscrew twills; entwining twills. Granite weaves; satin shading. Combination of weaves; figured weaving on plain ground. Fancy satin and figured stripes on plain ground. Spots arranged in different orders on plain, twill, satin ground. Imitation leno; honey-comb weaves. Bedford cords and combination with other weaves. Wave designs; pointed twills; diamond effects. Plain and fancy piques. Double plain; figured double plain. Double cloths. Cloths backed with warp; cloths backed with filling. Cloths ornamented with extra warp; cloths ornamented with extra filling. Cotton velvet. Corduroy. Matelasse. Leno weaves with one, two, and more sets of doups. Principles of working both top and bottom doups. Combination of plain and fancy weaves with leno. Methods of obtaining leno patterns. Jacquards. Distribution and setting out of figures for geometrical and floral effects. Distributing figures to prevent lines. Areas of patterns. Preparation of sketches. Transfer of sketches to

design paper. Painting in the design with different weaves according to sketch. Shading of patterns. Card cutting and lacing. Required of Sophomores, Juniors, and Seniors, and of first and second year students. Professor NELSON, Mr. SHUFORD, and Mr. STEED.

304. Cloth Analysis and Fabric Structure.—Calculating particulars of cloth from data ascertained from samples. Shrinkages. Dents in patterns; patterns in warp. Draughting and pattern chain building. Reed and harness calculations. Calculations to obtain quantities of warp and filling in stripe and check fabrics. To find number of threads per inch, using a given weight of warp; also number of picks per inch, using a given weight of filling. Yarn calculations. System of numbering woolen, worsted, silk, linen, and cotton yarns. Determination of one system of yarn to that of another. Textile calculations. Determining the number of threads and picks per inch to make a perfect cloth. Calculations to determine the texture in an unequally reeded fabric. Diameter of threads. Balance of cloth. Texture for double cloth. Required of Sophomores, Juniors, and Seniors, and of first and second year students. Professor NELSON, Mr. SHUFORD, and Mr. STEED.

DYEING COURSE.

As the textile industries of the State increase, the need of young men who have been trained in the principles as well as the practice of the different factory operations becomes apparent. In the course in dyeing the student is taught the different practical methods of the dye-house; the chemistry of the dyestuffs, some of each class of which he actually makes; the chemical changes brought about by mordants, assistants, etc. He also learns color matching, dye testing, and the methods for the analysis of the different chemicals used in the dye-house. He carries on the study of carding, spinning, weaving, designing, cloth analysis, etc., to the end of the Sophomore year, with the other textile students, and with them devotes attention to shop-work, drawing, engines, boilers, etc., together with the general studies of English, History, Mathematics, Physics, and General Chemistry, which are required in all the Four-year Courses.

VII. The Four-year Course in Dyeing, leading to the degree of Bachelor of Science.

Freshman Year.

Description of Subjects.

306. Dyeing.—With the microscope and other testing apparatus the student makes a careful study of the various fibers used in the textile industry. He also studies the chemical and physical properties of these fibers: the action of acids, alkalies, heat, moisture, and the various other agencies to which fibers are liable to be subjected. He next takes up the study of the fundamental principles which underlie the arts of bleaching and dyeing, such as the boiling out and bleaching of cotton, and the chemical reactions involving each step. The adaptability of water for bleaching and dyeing, followed by the theories of dyeing. Substantive dyes and their application to cotton.

After-treatment of direct colors, including diazotising and developing and the topping with basic colors. The application to cotton of basic colors, acid colors, mordant colors, including a study of the various mordants and their fixation with metallic salts. Dyeing with sulphur colors, indigo, natural and artificial, aniline black, turkey red, and other insoluble azo colors developed on the fiber. The methods of bleaching and dyeing of linen, jute, ramie, and other vegetable fibers. The scouring and bleaching of wool. The carbonization and chlorination of wool. The application of basic, acid, chrome, eosine, and direct colors to wool. Dyeing wool with logwood, fustic, and other natural dyewoods. Methods of the making and dyeing of artificial silk. The boiling off, bleaching and dyeing of natural silk. Study of the chemical and physical changes which take place during mercerization; also the methods of dyeing mercerized goods. The use of the various kinds of machines used in bleaching and dyeing. The dyeing of raw-stock, skeins, cops, warps, piece goods, hosiery, underwear, and unions. The science of color-mixing. Color-matching on textiles. The use of the tintometer and colorimeter. Calico printing, including the various methods of preparing the various pastes, thickening agents, mordants and assistants used in printing. Quantitative analysis of mixed yarns, and fabric composed of cotton, wool, and silk. The testing of dyestuffs for their shade, tinctorial power, and leveling properties. Comparative dye trials to determine money value. Testing for mixtures. The reactions of acids, alkalies and reducing agents on several samples taken from the different classes of dyestuffs. The use of hyraldite and other stripping agents.

Olney's Textile Chemistry and Dyeing is used as a text in connection with a course of lectures, which will include the consideration of many difficult problems that arise in the dye-house. Required of Juniors and Seniors in Textile Industry. Mr. SHUFORD.

307. Dyeing Laboratory.—A series of experiments is performed which covers all the subjects taken up in the lecture course, and includes a large amount of work done in the laboratory and dye-house. Special stress is put on the matching of colors and the dyeing of sulphur colors. Each student is required to bleach and dye a large number of samples of yarn and cloth on a small scale, and is required to mount specimens of his work in a scrap-book. At the discretion of the instructor in charge, the class bleaches and dyes larger quantities of raw-stock, cloth, and yarn in the dye-house, as well as prints samples on the laboratory printing machine. This work will be supplemented by visits to the mills which do dyeing in the city of Raleigh. Required of Juniors and Seniors in Textile Industry. Mr. SHUFORD.

CHEMISTRY.*

309. Inorganic Chemistry.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and Doctor WILLIAMS.

310. Inorganic Chemistry.—Laboratory work. Remsen's *Chemical Experiments*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. WILSON.

311. Organic Chemistry.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Three periods. Required of Juniors in Dyeing and elective for Seniors in Textile Industry. Professor WITHERS.

312. Analytical Chemistry.—Treadwell's *Qualitative Analysis*. A discussion of the principles involved in chemical analysis, together with laboratory work. The student is taught to detect the presence of the common metallic elements, as well as that of the acids, in unknown substances. Seven periods, first term. Required of Juniors in Dyeing. Doctor WILLIAMS.

313. Analytical Chemistry.—Treadwell's *Quantitative Analysis*. Gravimetric and volumetric analysis, special attention being given to the analysis of substances of technical importance. Seven periods, second and third terms. Required of Juniors in Dyeing. Seven periods. Required of Seniors in Dyeing. Doctor WILLIAMS.

314. Organic Chemistry.—Laboratory work. Gattermann's *Practical Methods of Organic Chemistry*, translated by Shober. The typical transformations and syntheses of the aliphatic and aromatic groups are taken up. The student thus becomes familiar with the reactions and properties of the more important organic compounds. One of each of the more important classes of dyestuffs is prepared and the properties studied. Four periods. Required of Seniors in Dyeing. Doctor SYME.

315. Industrial Chemistry.—Thorpe's *Outlines of Industrial Chemistry*. A discussion of the processes and principles involved in the more important chemical industries. A discussion of the materials of

*For further information, see course in Chemistry.

engineering. Three periods. Required of Seniors in Dyeing. Professor WITHERS.

MECHANICAL ENGINEERING.*

316. Free-hand Drawing.—Work in the use of the pencil; technical sketches of objects, usually parts of a machine. Two periods, first term. Required of Freshmen and first-year students. Mr. VAUGHAN.

317. Elementary Mechanical Drawing.—Use of instruments; geometric drawing; isometric and cabinet drawing; elementary projections; drawings made to scale from working sketches of pieces of a machine. Two periods, second term. Required of Freshmen and first-year students. Mr. VAUGHAN.

318. Descriptive Geometry Drawing.—Elementary principles; cylinders, cones, and prisms; intersection development of surfaces; miscellaneous problems. Two periods, third term. Required of Freshmen. Mr. VAUGHAN.

320. Wood-work.—Use of bench tools; working from drawings, lining, sawing, planing; practice in making simple exercises in wood-turning. Two periods. Required of Freshmen. Mr. CLAY.

321. Forge-work.—Exercises in working with iron, welding; use and care of forge-tools and fires. Two periods. Required of Freshmen. Mr. WHEELER.

324. Machine-shop Work.—Bench and machine work. Exercises in chipping and filing. Exercises in lathe work, boring, reaming, drilling, planing, milling, and shaper work. Two periods. Required of Textile Seniors. Mr. PARK.

326. Boilers.—Steam generation; types, care and management; fittings and appliances; corrosion and incrustation; combustion of fuel; boiler power. Two periods, first term. Required of Juniors. Professor THOMAS.

327. Steam-engines.—Types—simple and compound and triple expansion, automatic, Corliss, rotary. Care and management. Indicators, indicated and brake horse-power, condensers. Two periods, second term. Required of Juniors. Professor THOMAS.

PHYSICS.†

331. Elementary Physics.—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Two periods. Required of Freshmen. Mr. HEWLETT.

*For full information, see course in Mechanical Engineering.

†For full information, see course in Electrical Engineering.

MATHEMATICS.*

333. **Arithmetic.**—Milne's *Standard Arithmetic*. Begin with decimal fractions and complete the subject. Five periods, first term. Required of first-year students. Mr. RICHARDSON and Mr. SYKES.

334. **Algebra.**—Wells's *New Higher Algebra*. Up to quadratic equations. Five periods, second and third terms. Required of first-year students. Mr. RICHARDSON and Mr. SYKES.

335. **Algebra (Continued).**—Wells's *New Higher Algebra*. Begin with quadratic equations and complete logarithms, embracing ratio and proportion, variation, the progressions, the binomial theorem, series and partial fractions. Five periods, first term; two periods, second term. Required of Freshmen. Mr. RICHARDSON and Mr. J. A. PARK.

336. **Geometry.**—Wentworth's *Plane and Solid Geometry*. Plane Geometry. Three periods, second term; five periods, third term. Required of Freshmen. Professor YATES, Mr. RICHARDSON, and Mr. J. A. PARK.

337. **Solid Geometry.**—Required of Sophomores. Five periods, first term. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

338. **Advanced Algebra.**—Wells's *New Higher Algebra*. Compound interest and annuities, permutations, combinations, continued fractions, general theory of equations, and the solution of higher equations, etc. Required of Sophomores. Three periods, second term. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

339. **Trigonometry.**—Wells's *Plane and Spherical Trigonometry*. Plane Trigonometry. Solution of plane triangles, triangulations, etc. Spherical Trigonometry. Solution of spherical triangles. Required of Sophomores. Two periods, second term; five periods, third term. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

ENGLISH.

340. A drill on the forms of the language; the correct relation of words; the sentence; the paragraph. Daily written exercise. Three periods. Required of first-year students. Doctor SUMMEY and Mr. BONN.

341. **Introductory Composition and Rhetoric.**—This course in the fundamentals of Rhetoric is made thoroughly practical. Students

*For full information, see course in Engineering.

write instead of studying about how to write. The written work is accompanied by a steady drill on grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods a week. Required of Freshmen. Professor HILL, Doctor SUMMEY, and Mr. BONN.

342. *Rhetoric, Criticisms, Essays.*—The student is taught the essentials of good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Three periods, first term. Professor HILL, Doctor SUMMEY, and Mr. BONN.

343. *Argumentation.*—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of exercises. Required of Seniors. Two periods, third term. Professor HILL.

344. *American Literature.*—By means of an introductory text and by much reading, students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Three periods, second and third terms. Required of Sophomores. Professor HILL, Doctor SUMMEY, and Mr. BONN.

345. *English Literature.*—The development of English Literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two periods, third term. Required of Juniors. Two periods, first and second terms. Required of Seniors. Professor HILL.

347. *English History.*—The first term of the Junior year is devoted to a study of English history. The text is supplemented by lectures on important periods. Two periods, first and second terms. Required of all Juniors. Professor HILL.

MODERN LANGUAGES.

The aim of the department is to enable one to use a limited vocabulary for practical purposes in speaking and writing fluently simple sentences without idiomatic expressions or difficult constructions, and to read scientific works, and to know the meaning of difficult constructions and idiomatic expressions of the foreign language.

A unilingual method is used, based on conversation, humorous anecdotes, interesting short stories and scientific articles. The student is taught to think in the foreign language by a direct association of thoughts with foreign expressions without the medium of English.

The meaning and fluent use of foreign expressions are taught by a direct appeal to real objects, gestures, pictorial illustrations, cognates.

context, comparisons, contrasts, and associations, beginning with leading simple questions, and gradually progressing to more advanced ones, frequent repetitions and a strict adherence to the rule that answers be always given in complete short sentences of the foreign language, and never by "yes," "no," or some other short word alone.

Grammatical and lexical details for the thorough understanding of the lessons are given. The rules are deduced from the examples, and the student is trained in their correct use by interesting connected matter.

Written examinations consist of translations from English into the foreign language and of questions and answers in the foreign language. No English appears in an examination paper. No time is allowed for hesitancy. Answers are spoken fluently and written rapidly.

Instruction is given three or four hours per week, according to the size and convenience of the classes. When four hours are given, the class receives its instruction twice a week, and each time two hours in succession.

Students may take any one or all of the Modern Languages during the Junior or Senior year. The work is optional, but credit towards a degree is allowed for the successful completion of the work. Work begun and continued a month may not be dropped without consent of the Faculty.

The languages taught are German, French and Spanish.

348. German.—Worman's *Modern Languages*, first and second German books: *Studien und Plaudereien*, first and second books: Fischer's *Practical Lessons in German: Practical German Grammar*, by Calvin Thomas: *German Reader*, by Fischer: *Scientific Reader*. Doctor RUDY.

349. French.—Worman's *Modern Languages*, first and second French books: Worman's *Grammaire Française*: selected short stories of French literature, and scientific readers. Doctor RUDY.

350. Spanish.—Worman's *Modern Languages*, first and second Spanish books: a Spanish grammar to be selected: Fontaine's *Flores de Espana*, and other short stories of Spanish literature; *Modelos para Cartas*. Doctor RUDY.

BUSINESS LAW AND CIVICS.

352. Business Law.—This course includes such subjects as contracts, agency, sales, negotiable paper, insurance, patent rights, etc. The purpose of the course is to teach the general principles of business law. Text-book: *Parsons' Laws of Business*. One period. Required of Seniors. President WINSTON.

POLITICAL ECONOMY AND GOVERNMENT.

353. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. One period. Required of Juniors. President WINSTON.

354. Advanced Political Economy and Government.—Two periods. Elective for Seniors. President WINSTON.

MILITARY SCIENCE.

359. Drill.—School of the Soldier: Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours, first term. Two periods, second and third terms. Required of all classes except Seniors. Seniors are to either take drill or two extra hours in some other subject instead. Commandant and Officers of the Battalion.

360. Tactics.—Theoretical instruction in Infantry Drill, Field Service, Army Regulations, Guard Duty, and Target Practice. One period. Required of Juniors. Lieutenant YOUNG.

NORMAL COURSES.

I. For Rural Teachers:

- (a) Two-year Course.
- (b) One-year Course.
- (c) A Two Weeks' Spring Course.

II. For City Teachers:

- (a) Two-year Course.
- (b) One-year Course.
- (c) A Two Weeks' Spring Course.

The Normal Courses are intended for the education of teachers, both men and women, chiefly along industrial lines. Industrial education, particularly in agriculture, is being introduced into our public schools, and the College has a constant demand for teachers well trained in these subjects. It is hoped by means of the Normal Courses to help supply this demand. Our School Law already requires agriculture to be taught in the public schools, and manual work will doubtless be added.

The Courses for Rural Teachers are devoted largely to agriculture and nature study; the Courses for City Teachers, to drawing and manual training. Each of these courses also includes a review of other public-school studies.

Persons already engaged in teaching may, at slight expense of time and money, by means of the short course, or May School, make themselves proficient in one or more industrial lines. Persons preparing to teach may take the full courses, and thus become proficient not only along industrial lines, but also in the other public-school branches and in one or more sciences, or in higher mathematics and English. The industrial training given is both practical and theoretical, and is arranged with reference to the present needs of the public schools in North Carolina. The exercises in the Normal Courses are the same as in the other courses of the College, except in the May School.

The Normal Courses are as follows:

I. Courses for Rural Teachers.

Poultry.....	..	3	3
Entomology.....	3
Diseases of Plants.....	2
Agricultural Literature.....	1	1	1

Elective in any College department; *e. g.*, Agricultural Chemistry, Land Surveying, Physics and Physical Laboratory, Drawing and others.

II. Courses for City Teachers.

(a) TWO-YEAR COURSE.

First Year.

Drawing.....	2	2	2
Wood-work.....	1	1	1
Forge-work.....	1	1	1
Mechanical Technology.....	1	1	1
Algebra and Geometry.....	5	5	5
English.....	3	3	3
History.....	2	2	2
Drill.....	3	3	3

Elective, 3 periods required: Physics 2, Nature Study (Plants) 3, Nature Study (Animals) 3.

Second Year.

SUBJECTS.	PERIODS A WEEK.		
	1st Term.	2d Term.	3d Term.
Drawing.....	2	2	2
Wood-work.....	4	4	4
Forge-work.....	1	1	1
English.....	2	2	2
Architecture and Descriptive Geometry.....	2	2	2
Architectural Drawing.....	2	2	2
Geometry and Trigonometry.....	4	4	4
Military Drill.....	3	2	2

Elective, at least 2 periods required: Chemistry 3, Chemical Laboratory 2, Electricity and Magnetism 2, Descriptive Geometry 2, Plant Diseases, Human Physiology 3, Physiological Botany 3.

(b) ONE-YEAR COURSE.

Drawing.....	3	4	4
Wood-work.....	4	5	5
Forge-work.....	2	2	2
Architecture.....	2
Architectural Drawing.....	2	2	2
Algebra and Geometry.....	5	5	5
Military Drill.....	3	2	2

Elective: Physics 2, English (132) 3, English (133 and 135) 2, History 2, Nature Study (Plants) 3, Nature Study (Animals) 3, Chemistry 3, Chemical Laboratory 2, Electricity and Magnetism 2, Plant Diseases 3, Human Physiology 3, Physiological Botany 3, Geometry and Trigonometry 4, Descriptive Geometry 2.

The May School for Teachers.

MAY 3 TO 15, 1909.

The chief subjects of instruction in this course are Agriculture and Nature Study. Attention is also given to school gardens and the common branches are reviewed, meeting the legal requirement that teachers attend an institute once in each two years.

No fees are charged to this course. Board is supplied at \$2.50 a week, and lodging at \$1 a week.

DONATIONS.

The College makes thankful acknowledgment of the receipt of the following gifts during the year:

To the Electrical Engineering Department.

General Electric Company, Harrison, N. J.—Samples of Tungsten Tantalum and general incandescent lamps.

To the Mechanical Department.

The John-Manville Co.—A full set of insulating materials for steam and refrigeration.

To the Animal Husbandry Department.

American Saddle Horse Register.—Five volumes.
Dutch Belted Cattle Breeders' Record.—Nine volumes.
American Chester White Record.—Seven volumes.
Merino Sheep Breeders' Record.—Three volumes.
American Oxford Down Record.—Two volumes.
American Leicester Sheep Breeders' Record.—Two volumes.
National DeLaine Sheep Breeders' Record.—Three volumes.
Standard Poland China Breeders' Record.—Twenty-one volumes.

To the Textile Department.

Lahue & Co., Lowell, Mass.—Two pair iron lug straps.
Emmons Loom Harness Company, Lawrence, Mass.—Loom harness and reeds.
Hampton Company, Easthampton, Mass.—Mercerized yarns.
Draper Company, Hopedale, Mass.—One sateen loom, ball warper, and loom supplies.
American Enamel Company, Providence, R. I.—Lease rods.
Lowell Machine Shop, Lowell, Mass.—Loom.
American Moistening Company, Boston, Mass.—Complete humidifying system.
Woonsocket Machine and Brass Company, Woonsocket, R. I.—Balls for top rolls.
Kilburn-Lincoln Company, Fall River, Mass.—Loom supplies.
Corn Products Refining Company, Chicago, Ill.—One barrel corn starch.

- Fairpoint Corporation, New Bedford, Mass.*—Tubes and cones.
Tolhurst Machine Works, Troy, N. Y.—Hydro extractor.
Jones & Laughlin Steel Company, Pittsburg.—Shafting, hangers, and pulleys for dye-house.
Edward R. Ladew, New York.—Reduction on belting.
The Robert Schaelibaum Company, Providence, R. I.—Two sets patent grids.

Courtesies Extended to the Textile Department.

- American Textile Manufacturer, Charlotte, N. C.*
Textile Manufacturers' Journal, New York.
Fiber and Fabric, Boston, Mass.
Textile World Record, Boston, Mass.
The Tradesman, Chattanooga, Tenn.
American Industries, New York City.
Cotton, Atlanta, Ga.
American Cotton and Wool Reporter, Boston, Mass.
Mill News, Charlotte, N. C.
The Dyer and Calico Printer, London, Eng.
Cassella Color Company, New York City.
Pilot Cotton Mills, Raleigh, N. C.
Caraleigh Cotton Mills, Raleigh, N. C.
Raleigh Cotton Mills, Raleigh, N. C.

To the Rural Science Club.

- International Harvester Company, Chicago, Ill.*—New reversible extension head disc harrow.

EIGHTEENTH ANNUAL COMMENCEMENT.

MAY 29, 1907.

Degrees Conferred.

BACHELORS OF AGRICULTURE.

JACOB TATUM EATON.	JAMES ELWOOD OVERTON.
BENJAMIN BRYAN EVERETT.	THOMAS FRANKLIN PARKER.
LAWRENCE JAMES HERRING.	ARTHUR LEE PASCHALL.
ALBERT CARL JONES.	JOHN ED. TURLINGTON.
LAFAYETTE FRANK KOONCE.	EDMUND FARRISS WARD.
DAVID LYNDON WHITE.	

BACHELORS OF SCIENCE.

In Industrial Chemistry.

LEWIS EDGAR LOUGHE.	HENRY STARRUCK MONTAGUE.
HENRY KREIGER MCCONNELL.	JAMES KEMP PLUMMER.
ARTHUR JOHN WILSON.	

BACHELORS OF ENGINEERING.

In Civil Engineering.

HERBERT SCANNELLIN BATTIE.	OSCAR FRANKLIN MCNAIRY.
SERA ELBRIDGE.	JOHN LIGHTFOOT MORSON.
CLEMENT LEINSTER GAENER.	GUY PINNER.
ROY JOSEPH GILL.	LEON JACOB SCHWAB.
PHILIP WILLIAM HADDIE.	VANCE SYKES.
GUY FRANCIS HINSHAW.	LUTHER RUSSELL TILLET.
JOHN JACKSON WELLS.	

In Electrical Engineering.

JOE PITTMAN RIVENS.	GEORGE ROM HARDESTY.
CARNEY JOHN BRYAN.	JOKTAN LAFAYETTE HEMPHILL.
LINDSAY FERGUSON CARLETON.	WILLIAM WHITMORE JONES.
ROBERT HILL CARTER.	FRANK CURTIS MICHAEL.
JOHN LINDSAY FERGUSON.	FRED MAYNARD PARKS.
EMAS VAN BUREN FOWLER.	JOHN OSCAR SHUFORD.
ROBERT STRICKLER GRAVES.	CECIL BERNARD WHITEHURST.

In Mechanical Engineering.

EUGENE FRANKLIN MEADOR,
 BENNETT TAYLOR MIAL.
 JOHN MAPLE MILLS,

WINSLOW GERALD PITMAN,
 WILLIAM BROOKS TRUITT,
 LINDSAY MARADE WEAVER.

In Textile Industry.

JOHN WASHINGTON CLARK, B.E., LOVIC RODGERS GILBERT.
 WILLIAM NORMAN HOLT,

CIVIL ENGINEER.

GEORGE FREDERICK SYME, B.S.

FACULTY.

DANIEL HARVEY HILL, A.M., Lit.D., President.

WALLACE CARL RIDDICK, A.B., C.E., Professor of Civil Engineering and Vice President.

WILLIAM ALPHONSO WITHERS, A.M., Professor of Chemistry.

FRANK LINCOLN STEVENS, M.S., Ph.D., Professor of Botany and Vegetable Pathology.

ROBERT E. LEE YATES, A.M., Professor of Mathematics.

THOMAS NELSON, Professor of Textile Industry.

JOHN SOMERVILLE EATON YOUNG, First Lieutenant U. S. A., Professor of Military Science and Tactics.

CLIFFORD LEWIS NEWMAN, M.S., Professor of Agriculture.

JOHN MICHELS, B.S.A., M.S., Professor of Dairying and Animal Husbandry.

WILLIAM HAND BROWNE, Jr., A.B., Professor of Physics and Electrical Engineering.

HOWARD ERNEST SATTERFIELD, B.S. in M.E., Professor of Mechanical Engineering.

THOMAS PERRIN HARRISON, Ph.D., Professor of English. ✓

GUY ALEXANDER ROBERTS, B.S., D.V.S., Professor of Veterinary Science and Physiology.

HENRY C. WALTER, B.S., Acting Professor of Physics and Electrical Engineering.

FRANK C. REIMER, M.S., Associate Professor of Horticulture.

BARTHOLOMEW MOORE PARKER, B.S., Assistant Professor of Textile Industry.

WILLIAM ANDERSON SYME, B.S., M.S., Ph.D., Assistant Professor of Chemistry.

CHARLES BENJAMIN PARK, Instructor in Machine Shop and Assistant in Power Plant.

CARROLL LAMB MANN, B.S., C.E., Instructor in Civil Engineering.

GEORGE SUMMEY, Jr., Ph.D., Instructor in English.

CLARENCE ANDREW SPRAGUE, B.S., Instructor in Physics.

ALFRED HENRY THIESSEN, B.S., Section Director United States Weather Bureau, Instructor in Meteorology.

JOHN STRAUCHON JEFFREY, Instructor in Poultry Husbandry.

ABRAHAM RUDY, A.M., Pd.D., Instructor in Modern Languages.

RALPH INGRAM SMITH, B.S., Instructor in Zoology and Entomology.

WILEY THEODORE CLAY, B.E., Instructor in Wood-working and Pattern-making.

JOHN ELSEY PARK, B.E., Instructor in Mathematics.

MICHAEL RALPH RICHARDSON, A.M., Instructor in Mathematics.

LILLIAN LEE VAUGHAN, B.E., Instructor in Drawing and Mechanics.

CARL PHILIP BONN, B.A., Instructor in English.

VANCE SYKES, B.E., Instructor in Mathematics and Civil Engineering.

WELDON THOMPSON ELLIS, B.E., M.E., Instructor in Machine Design and Steam Laboratory.

LEON FRANKLIN WILLIAMS, A.B., A.M., Ph.D., Instructor in Chemistry.

JOHN WORTHINGTON DORSEY, E.E., Instructor in Electrical Engineering.

JOHN EDWARD HALSTEAD, B.S., Instructor in Dyeing.

HUBERT HILL, B.S., M.S., Instructor in Chemistry.

WILLIAM BROOKS TRUITT, B.E., Instructor in Physics.

JOHN LAWRENCE VON GLAHN, B.E., Instructor in Mathematics and Civil Engineering.

JESSE PAGE SPOON, B.Agr., Laboratory Assistant in Anatomy and Physiology.

JOHN GALENTINE HALL, A.M., Instructor in Biology.

PERCY LEIGH GAINES, B.Agr., Assistant in Bacteriology.

HERBERT NATHANIEL STEED, Instructor in Weaving and Designing.

FRED BARNET WHEELER, Instructor in Forge.

OTHER OFFICERS.

EDWIN BENTLEY OWEN, B.S., Registrar.

ARTHUR FINN BOWEN, Bursar.

BENJAMIN SMITH SKINNER, Farm Superintendent.

JAMES OLIVER LOFTIN, Steward.

Miss ~~ELSIE LANIER STOCKARD~~, Librarian.

Mrs. ~~DAISY LEWIS~~, Hospital Matron.

Miss ~~ISABELLA WILLIS PESUD~~, Stenographer.

HENRY McKEE TUCKER, M.D., Physician.

NORTH CAROLINA AGRICULTURAL EXPERIMENT STATION
DEPARTMENT, WEST RALEIGH.

DANIEL HARVEY HILL, A.M., Lit.D., President.

CHARLES BURGESS WILLIAMS, M.S., Director and Agronomist.

WILLIAM ALPHONSO WITHERS, A.M., Chemist.

FRANK LINCOLN STEVENS, Ph.D., Vegetable Pathologist.

JOHN STRAUCHON JEFFREY, Poultryman.

FRANK CHARLES REIMER, M.S., Horticulturist.

ROBERT SETH CURTIS, B.S.A., Animal Husbandman.

JOHN MICHELS, M.S.A., Dairy Husbandman.

RALPH INGRAM SMITH, B.S., Entomologist.

GUY ALEXANDER ROBERTS, D.V.S., Veterinarian.

WILLIAM ANDERSON SYME, Ph.D., Assistant Chemist.

JOHN GALENTINE HALL, A.M., Assistant in Plant Diseases.

WILLIAM CARLYLE ETHERIDGE, B.Agr., Assistant in Farm
Crops.

JAMES KEMP PLUMMER, B.S., Assistant Chemist.

PERCY LEIGH GAINNEY, B.Agr., Assistant Bacteriologist.

A. R. RUSSELL, Assistant in Field Experiments.

ARTHUR FINN BOWEN, Bursar.

CRAVEN PEARCE FRANKLIN, Secretary and Stenographer.

MILITARY ORGANIZATION.

Commandant of Cadets.

FIRST LIEUTENANT JOHN S. E. YOUNG, U. S. Army.

Cadet Major.

H. N. SUMNER.

Battalion Staff.

T. M. CLARK, Captain and Adjutant.

W. F. MORRIS, Captain and Quartermaster.

Noncommissioned Staff.

S. H. McNEELY, Sergeant Major.

T. D. HARRIS, Color Sergeant.

Band.

T. F. HAYWOOD, Captain.

W. R. MARSHALL, First Lieutenant.

J. H. ROBERTSON, Second Lieutenant.

R. J. WYATT, Drum Major.

W. E. DAVIS, First Sergeant.

I. N. TULL, Sergeant.

C. E. WALTON, Sergeant.

W. R. PHILLIPS, Sergeant.

O. M. SIGMON, Corporal.

J. W. ROLLINSON, Corporal.

G. R. ROSS, Corporal.

L. E. STEERE, Corporal.

R. T. WADE, Corporal.

*MILITARY ORGANIZATION.***Company A.**

J. W. HARRELSON, Captain.
J. E. LATHAM, First Lieutenant.
W. N. SLOAN, Second Lieutenant.
H. S. STEELE, Second Lieutenant.
T. B. SUMMERLIN, First Sergeant.
J. C. ALBRIGHT, Sergeant.
H. C. CLAY, Sergeant.
W. L. MANNING, Sergeant.
L. D. MOODY, Sergeant.
W. H. DAVIS, Corporal.
J. L. MARTIN, Corporal.
K. BRYAN, Corporal.
W. P. THURSTON, Corporal.
F. T. PEDEN, Corporal.
W. J. HALL, Corporal.

Company B.

R. A. SHOPE, Captain.
W. S. DEAN, First Lieutenant.
W. M. MILLNER, Second Lieutenant.
R. R. FAISON, Second Lieutenant.
J. F. ROBINSON, First Sergeant.
J. B. PARKS, Sergeant.
L. L. HOOD, Sergeant.
T. S. BOND, Sergeant.
M. S. MAYES, Sergeant.
J. L. SPRINGS, Sergeant.
N. R. MARTIN, Corporal.
E. JOHNSTON, Corporal.
J. P. QUINERLY, Corporal.
G. W. GILLETTE, Corporal.
T. W. THORNE, Corporal.
F. G. TUCKER, Corporal.

Company C.

J. M. PRICE, Captain.
J. W. IVEY, First Lieutenant.
J. B. CRAVEN, Second Lieutenant.
J. E. TOOMER, Second Lieutenant.
L. P. McLENDON, First Sergeant.
R. L. MORGAN, Sergeant.
R. E. GILL, Sergeant.
T. H. THOMPSON, Sergeant.
H. W. WELLES, Sergeant.
W. M. NEALE, Sergeant.
W. BAILEY, Corporal.
J. M. BEAL, Corporal.
R. S. FAIRLY, Corporal.
M. F. WYATT, Corporal.

Company D.

W. A. HORNADAY, Captain.
J. G. PASCHAL, First Lieutenant.
J. M. PARKER, Second Lieutenant.
C. R. JORDAN, First Sergeant.
E. L. WINSLOW, Sergeant.
E. A. SEIDENSPINNER, Sergeant.
R. BOWDITCH, Sergeant.
C. R. BRADLEY, Sergeant.
J. W. BUCHANAN, Corporal.
R. BOYLAN, Corporal.
R. L. MORRISON, Corporal.
S. B. PHIFER, Corporal.

NOTE.—On October 14, 1908, the Battalion held a competitive drill on the Fair Grounds track, during the State Fair, and Company C, Corps of Cadets, was selected as the best drilled organization and awarded the College pennant.

GENERAL INFORMATION.

The North Carolina College of Agriculture and Mechanic Arts owes its existence to the combined liberality of the United States Government and of R. S. Pullen, of Raleigh, together with the patriotic efforts of a few far-sighted men who saw that in the industrial life of North Carolina the time had come when trained and educated leaders were necessary. The first act of the General Assembly of this State in relation to the College was ratified in 1885, the bill, which afterwards became a law, having been introduced by A. Leazar, Esq. The Congress of the United States in 1862 passed a bill, introduced by Senator Justin S. Morrill, of Vermont, giving to each State public lands "for the endowment, support, and maintenance of at least one college, whose leading object shall be, without excluding other scientific and classical studies and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life."

The income from this grant, amounting to \$7,500 annually, was appropriated in 1887 by the Legislature of the State for the establishment and yearly maintenance of this College. Sufficient land for the College site and farm was given by the late R. S. Pullen. The College was formally opened for students October 1, 1889.

Additional funds were provided afterwards by the National Congress by the "supplemental Morrill Act" of 1890 and the "Nelson Act" of 1907 and by State appropriations.

The College is beautifully located on the extension of Hillsboro Street in the western suburbs of Raleigh, a mile and a quarter from the State Capitol. The site is suitable in all respects.

There is an abundant supply of water from the city mains and from twelve deep wells on the College grounds. The water is analyzed, both chemically and bacteriologically, at regular periods.

The College now owns six hundred and eighty-five acres of land. Fourteen hundred young trees and nine hundred and forty vines are growing in an orchard of sixteen acres. Seven acres are devoted to truck growing. The herd consists of thirty-eight cows, twenty-seven calves, and two pure-bred Jersey bulls. The laboratories, drawing-rooms, and workshops are well equipped for practical work.

BUILDINGS.

The Administration Building is of brick, with brownstone trimmings, and is one hundred and seventy by sixty-four feet; part four stories in height and the remainder two. The lower floors contain the offices of the President, the Registrar, and the Bursar, several recitation-rooms and the chemical and physical laboratories. The upper stories are occupied by students.

In this, as in other buildings, every precaution has been taken to secure good sanitation. The rooms are well lighted, well ventilated and conveniently arranged.

The Mechanical Engineering Building is a plain, substantial two-story brick building, with large annex. It contains the drawing-rooms, recitation-rooms, and shops of the department.

Primrose Hall is a two-story brick building used for drawing-rooms and laboratories by the Department of Civil Engineering.

The Textile Building is a two-story brick building one hundred and twenty-five by seventy-five feet, with a basement. Its construction is similar to a cotton mill, being an illustration of standard construction in this class of buildings. The basement contains the dyeing department, the first floor the looms and warp preparation machinery, and the second floor the carding and spinning machinery.

Pullen Hall was named in honor of the late R. Stanhope Pullen, the greatest benefactor of the College. The basement of this building is used as a dining room and seats five hundred students. The first story is used for library, reading room and lecture rooms. The second story serves as the College auditorium. This building is commodious, comfortable and well lighted.

The Agricultural Hall is a three-story buff press-brick building with granite trimmings and is two hundred and four by seventy-four feet. The lower or basement floor contains the class rooms and laboratories for work in the Department of Animal Husbandry and Dairying. Ample provision is made for butter-making, stock judging, farm butchering, and cold-storage accommodations for the products.

The second floor contains the offices of the department, class rooms for animal husbandry and agronomy, and laboratories for soil physics and agricultural machinery.

On the top floor are the rooms devoted to botany and vegetable pathology, zoology, physiology, and veterinary medicine. There are well-equipped class rooms and large, well-lighted laboratories.

The building affords excellent accommodations for education in agriculture and allied subjects, and is especially adapted to its needs.

The **Electric Laboratory** is a one-story brick building. It is equipped with modern electrical apparatus to which large additions will be made.

Watauga Hall is a three-story brick building, trimmed with brown-stone and containing sixty rooms for dormitories. There is also a large dormitory in the attic, and in the basement are bath-rooms, which are free for students' use.

Dormitories.—In addition to Watauga Hall, one three-story and three two-story brick buildings are used exclusively for dormitories.

The **Infirmary** is a two-story brick building, containing a sitting-room, seven bed-rooms, three bath-rooms, a kitchen, linen-room, College Physician's office and medicine closet. The rooms are large, well ventilated, well lighted, and heated by steam. Each room opens upon a large, pleasant portico. The furnishing and equipment of the rooms are such as are used in modern hospitals.

Foundry.—The old boiler house has been fitted up for foundry purposes. It contains a 36-inch cupola furnace, Griffin Oil Furnace for melting iron; another for brass, and a small crucible furnace for brass melting; a core oven; benches and hand tools for moulding in the course of exercises, as well as for any repair work for the College.

The **Barn** is a frame building carefully planned for the purposes to which it is devoted. The barn is fifty by seventy-two feet and three stories high.

The **Fire Protection** of the College consists of the following equipment: An Underwriter fire pump, stand-pipe and reservoir, hose and hose reels. Hydrants are conveniently located about the grounds, with attached hose nozzles, etc. The buildings are supplied with extinguishers.

The **New Power Plant** furnishes heat, light, and power for all the buildings. The boiler plant consists of two 75-horse-power Babcock and Wilcox Company and two 100-horse-power Atlas Water-Tube Boilers, with a working steam pressure of 150 pounds. The Engine Plant consists of a 100-horse-power Skinner Engine and Crocker-Wheeler Generator attached; a 100 K. W. De Laval Turbine Generator set with self-exciter; a 10 K. W. steam-driven Exciter Set. Steam, and Vacuum Pumps for feeding the boilers and maintaining circulation in steam-heating apparatus. The buildings are equipped with Warren Webster system of heating.

THE AGRICULTURAL EXPERIMENT STATION.

The North Carolina Agricultural Experiment Station is a department of the College. It was established originally as a division of the State Department of Agriculture, in accordance with an act of the

General Assembly ratified March 12, 1877. Its work was greatly promoted by act of Congress of March 2, 1887, which made a liberal donation to each State for the purpose of investigations in agriculture and for publishing the same. The bill, which subsequently became a law, was introduced by Representative William H. Hatch, of Missouri. The funds of the Experiment Station were supplemented by the act of Congress of March 16, 1906, known as the "Adams Act."

The Director's office is in the Agricultural Building and the laboratories are in the main building at the College. The experimental work in agriculture, horticulture, stock and poultry raising, and dairying is conducted on the College farm, and the investigations in plant diseases and chemistry are made in the College laboratories.

The Station is always glad to welcome visitors and to show them the work in progress. The Station conducts a large correspondence with farmers and others concerning agricultural matters. It takes pleasure in receiving and answering questions.

Publications relating to general farming matters and embodying the results of experiments are published and sent free to all citizens of the State who request them. A request addressed to the Agricultural Experiment Station, West Raleigh, N. C., will bring these publications and answers to letters.

THE PURPOSE OF THE COLLEGE.

The College is an institution where young men of character, energy, and ambition may fit themselves for useful and honorable work in any line of industry in which training and skill are requisite to success. It is intended to train farmers, mechanics, engineers, architects, draughtsmen, machinists, electricians, miners, metallurgists, chemists, dyers, mill-workers, manufacturers, stock-raisers, fruit-growers, truckers, and dairymen, by giving them not only a liberal but also a special education, with such manual and technical training as will qualify them for their future work.

It offers practical and technical education in Agriculture, Horticulture, Animal Industry, Civil Engineering, Mechanical Engineering, Electrical Engineering, Mining Engineering, Metallurgy, Chemistry, Dyeing, Textile Industry, and Architecture. It also offers practical training in Carpentry, Wood-turning, Blacksmithing, Machinists' Work, Mill-work, Boiler-tending, Engine-tending, Dynamo-tending and Installation, Electric-light Wiring, Armature Winding and other subjects relating to practical electricity.

Although the leading purpose of the College is to furnish technical and practical instruction, yet other subjects essential to a liberal

education are not omitted. Thorough instruction is given in English, Mathematics, History, Political Economy, Physics, Chemistry, Botany, Zoology, Physiology, and Geology.

The College is not a place for young men who desire merely a general education without manual or technical training, nor for lads lacking in physical development, mental capacity, or moral fiber, nor for those who are unable or unwilling to observe regularity, system, and order in their daily work.

WHAT THE COLLEGE EXPECTS OF ITS STUDENTS.

It is taken for granted that students in the College are here to get an education. They are expected, therefore, to attend classes, lectures, laboratories, shop-work, drills, inspections, etc., without being reminded of such duties each day, week or month.

Students cannot properly prepare for and perform these duties if they spend time in Raleigh or absent themselves from work and study. They are expected, therefore, to observe study hours in their rooms and refrain from visiting Raleigh, except when permitted by the rules of the College.

Students are also expected to keep their rooms neat and orderly: to refrain from noise during study hours, and from disorderly conduct at all times and places; in short, to live like gentlemen.

Hazing new students, cigarette-smoking, drinking, gambling, card-playing, visiting pool-rooms and all improper places, loafing on the streets, and other like vicious, idle, unhealthy and unprofitable performances are prohibited by the College rules.

A record is kept of every student in College; his failure to perform duty and his infractions of the rules. When this record shows that a young man is not in College for the purpose of getting an education, and is not using his opportunities properly, he will be required to withdraw. For scandalous and vicious offenses students will be dismissed. The rules of the College are intended solely to promote manliness, to form habits of order, punctuality, promptness and fidelity to duty, as well as simplicity, economy and healthfulness of living; and to prevent habits of idleness, disorder, extravagance, and vice.

PRIZES.

A first prize of ten dollars and a second prize of five dollars are awarded annually to the students in the Freshman Class who earn the largest and the next largest amounts of money by labor on the College farm.

The North Carolina State Fair Association offers a prize of \$5 to the student preparing the best essay on the Live-stock Exhibit at the State Fair.

To the Junior Mechanical Student who has made the most progress in Mechanical Drawing the Mechanical Department gives a set of high-grade drawing instruments.

Mr. William Dunn, of New Bern, North Carolina, gives annually a twenty-five-dollar gold medal to the Senior speaker who makes the best oration on Commencement Day.

DISCIPLINE.

The discipline is intended to secure studious habits, with punctuality, system, and order in the performance of all duties. Every effort is made to develop strong, intelligent, high-toned men; and proper patience, forbearance, and sympathy are used in this great work; but the College is in no sense a reform school, and it will not retain young men who are vicious, idle, or incompetent.

HAZING.

There has been no hazing of any sort in College this year. The present sentiment of the student body is opposed to this practice in our College, and its management feels sure that there will be no hazing during the next year.

REPORTS AND SCHOLARSHIP.

Regular reports of scholarship and conduct are sent to parents and guardians at the end of each term. Special reports are made whenever necessary. Students who are persistently neglectful of duty, or manifestly unable to do the work required, will be discharged at any time. The Faculty will require any student to withdraw whenever it is plain that his stay in the institution is not profitable to himself or to the College.

RELIGIOUS INFLUENCES.

All students are required to attend chapel exercises in Pullen Auditorium each morning. These services are conducted by the President, by some member of the Faculty, or by some visiting minister.

Each student is expected to attend religious service in Raleigh on Sunday morning at the church of his choice. The students are always welcomed in the Sabbath schools of Raleigh, and a large number of them attend these services.

YOUNG MEN'S CHRISTIAN ASSOCIATION.

The Young Men's Christian Association is a voluntary organization of the students, and is entirely under student management. A general secretary is employed by the association and devotes his entire time to the work. The members of the Faculty and the Board of Trustees are interested in the work and give assistance, both financially and otherwise. Any student who is a member of an evangelical church may become an active member. Any student of good moral character or who desires to improve his moral life may become an associate member.

The College Association is a branch of the International Association.

Two regular meetings of the association are held each week: one on Sunday evening and one on Wednesday. Musicians and speakers from Raleigh and other cities frequently take part in these services.

The purpose of the association is fourfold:

First, to build up Christian character and offer a suitable field for its development.

Second, to aid in keeping up the moral life of all the students in College.

Third, to train men in definite methods of Christian work, that they may be of the greatest service to their College and subsequently to their church and their country.

Fourth, to give moral young men such amusements and such good-fellowship as they need.

Bible study is systematically taken up by the association. Six or ten men are grouped into classes and meet regularly for Bible study. The leaders of these classes are trained for their teaching, and the entire work is under the supervision of the Bible Study Committee and the general secretary. Every student in College is urged to join one of these classes.

The association is supported by gifts from the Board of Trustees, the Faculty, and citizens of the State, and by its regular membership dues. Although membership is voluntary, it is desired that all students should apply for membership and thereby aid and be aided in an upright College life.

Plans are now under consideration for a fifteen-thousand dollar building to be fitted with every convenience for the association. This building will be the social center of College life. It will contain halls for the literary societies and for the Athletic Association as well as most comfortable quarters for the association.

ATHLETICS.

The College is provided with extensive grounds, which furnish ample facilities for military drill and athletic sports.

Outdoor sports are directly managed by the Athletic Association and are under the control of a committee of the Faculty.

The Athletic Association is organized by the student body to promote physical health and manly spirit through athletic sports. Under the direction of the Athletic Committee of the Faculty it promotes practice in base-ball, foot-ball, track athletics, etc.

LIBRARY AND READING-ROOMS.

The College Library occupies the first story of Pullen Hall. The reading-room is supplied regularly with about one hundred and fifty magazines and journals of various kinds, and yearly additions are being made to this number. The library contains about six thousand volumes. There are also reference libraries in the different departments. The library is kept open from 9 A. M. to 6 P. M. The Librarian is always present to assist students in finding desired information.

The Olivia Raney Library in Raleigh, containing now about ten thousand volumes, is free to the students and they have the privilege of borrowing books from it. Students also have the privilege of consulting books in the State Library.

STATE MUSEUM.

Students have free access to the large collections of the State Museum. These collections furnish most excellent opportunities for studies in Geology, Mineralogy, Mining, Forestry, and Natural History.

COLLEGE SOCIETIES.

Such college organizations are encouraged as tend to form good character, to develop manly physical vigor, and to promote literary, scientific and technical research and training.

The Biag Society is composed of those students who have made the best record in biological and agricultural subjects. The membership is limited to ten. The Society meets monthly for the discussion of biological and agricultural questions.

Farmers' Institute.—The students in the Winter Course in Dairying and Agriculture meet every Wednesday night during the winter term for a discussion of practical agricultural problems. The meet-

ings are conducted in the manner of a Farmers' Institute and give training in conducting farmers' meetings, *ex tempore* speaking on agricultural questions, and writing and reading of reports on various farm operations.

The Rural Science Club meets semi-monthly for the discussion of agricultural subjects, review of current agricultural publications, and reports on personal experiments and the work of the College farm and Experiment Station.

The Biological Club meets semi-monthly for the discussion of biological subjects in their relation to practical agriculture. Students here present results of their own investigations and observations and reviews of the more important current publications, particularly those from the United States Department of Agriculture and the State Experiment Stations.

The Tompkins Textile Society meets every two weeks for the purpose of discussing subjects relating to the textile industry.

The Mechanical Society meets every two weeks for the discussion of mechanical subjects.

The Berzelius Chemical Society meets fortnightly for the discussion of chemical subjects and for review of the current chemical literature, with which the College is well supplied.

The Pullen and Leazar Literary Societies afford excellent opportunities for practice in declamation, debate, composition, and parliamentary law, as well as opportunities for social pleasure and recreation.

The Alumni Association meets each year on Monday preceding Commencement Day, transacts its annual business, hears the Alumni oration and attends the annual Alumni banquet. This association purposes raising funds to erect an Alumni building at the College.

REQUISITES FOR ADMISSION.

Each applicant for admission must be at least sixteen years of age and must bring a certificate of good moral character from the school last attended.

To the Four-year Courses.—Applicants for admission to the Freshman Class of all four-year courses will be examined on the following subjects: Arithmetic (complete), Algebra (to involution), English Grammar, Analysis and Composition, and American History. No student will be admitted to the Freshman Class whose examination papers are seriously faulty in spelling, grammar, punctuation, or division into paragraphs.

To the Two-year Courses.—Applicants for admission to the two-year courses in Mechanic Arts and Textile Industry will be examined on Arithmetic (through common and decimal fractions), English Grammar and Composition, and American History.

To the One-year Course in Agriculture.—Applicants for admission to the one-year course in agriculture will be required to pass the same examination as for the two-year course.

To the Winter Courses.—No entrance examination is required of candidates for admission to the winter courses. No one under eighteen years of age will be admitted to a winter course.

ENTRANCE EXAMINATIONS.

Entrance examinations will be held by the County Superintendents of Instruction in each courthouse in the State at 10 o'clock A. M. the second Thursday in July of each year. The date for 1909 is July 8th. These examinations will save the expense of a trip to Raleigh in case the candidate should fail or if there should not be room enough for him in the College. Entrance examinations will be held also at the College at 9 o'clock A. M. on Wednesday preceding the opening day. The examinations begin with English at 9 A. M., in Room 21, Main Building, followed by Mathematics at 11, and History at 2, in the same room. The date for 1909 is September 1st.

ADMISSION WITHOUT EXAMINATION.

The following persons will be admitted without examination:

1. Applicants for admission to winter courses, over eighteen years of age.
2. School teachers holding teachers' certificates.
3. Graduates of those high schools and academies whose certificates are accepted by the Faculty of this College.

SESSION.

The College session lasts nine months, and opens annually the first Thursday in September and closes the last Tuesday in May, with a vacation of about two weeks at Christmas.

EXPENSE.

The total average college expense of a Freshman student is \$225.00.

The total average college expense of a Freshman student having a scholarship is \$180.00.

These amounts include cost of board, tuition, lodging, fuel and lights, fees and deposits, books, uniform and cap, drawing instruments, and laundry. They do not include allowance for clothing, other than for uniform and cap, nor for spending money and contingencies.

Allowance for clothing, spending money, and contingencies is a matter largely to be determined by the parent.

The amount of such allowance should be kept within reasonable bounds. From \$50.00 to \$100.00 per year are suggested as the minimum and maximum amounts.

This will make the total expense for all purposes of a Freshman student, without a scholarship, amount to from \$275.00 to \$325.00 for the entire session; or \$230.00 to \$280.00, if he has a scholarship.

The largest payment is made in September. A student on entering college should bring at least \$60.00 to meet his various payments for the first month.

Students withdrawing from college within two weeks from date of entrance will be refunded all money paid by them to the College Bursar, except charges for board during the time here. Students withdrawing later than two weeks from date of entrance will be refunded no money except for board.

Board is \$10.00 per month and is payable on the first day of each month from September to May inclusive; board for less time than one month is charged for at the rate of fifty cents a day or \$3.00 per week.

The College Bursar is forbidden by the Trustees to give credit.

A more detailed statement of college fees is as follows:

The Bursar is instructed to collect from each student at the beginning of the session in September of each year the following amounts: Room rent, fuel and lights, \$15.00; incidental fee, \$5.00; medical fee, \$3.00; lecture fee, \$1.00; library fee, \$1.00; furniture fee, \$1.00; physical culture fee, \$1.00; fee to cover damage to guns issued to cadets, \$5.00; board for September, \$10.00. Total \$42.00.

Day students pay in full for half year on entering.

In addition to the above each student will be required to purchase a uniform, costing \$15.00. Five dollars of this must be paid when measure is taken, and the balance when the uniform is delivered, which will be by the last of September.

In addition to the above, the following Department fees will be paid to the Bursar at the same time :

	Sen.	Jun.	Soph.	Fresh.	2d Year S. C.	1st Year S. C.
Agr. students..	\$ 10.00	\$ 1.00	\$ 4.00	\$ 1.00	\$.....	\$ 1.00
C. E. " --	1.00	1.00	4.00	3.00	-----	-----
M. E. " --	2.00	2.00	6.00	3.00	2.00	2.00
E. E. " --	3.00	3.00	6.00	3.00	-----	-----
Chem. " --	10.00	6.00	4.00	3.00	-----	-----
Tex. " --	9.00	8.00	8.00	4.00	7.00	7.00

The Bursar will collect from each pay student by November first of each year tuition for half the session (amount \$22.50).

The following are the January payments (without scholarship) : room rent, fuel and lights, \$15.00; tuition (half session), \$22.50; furniture fee, \$1.00; medical fee, \$3.00; physical culture fee, \$1.00; board for January, \$10.00. Total, \$52.50.

The amount required of students with scholarships is the same as above, less \$22.50, or \$30.00.

The College rooms are supplied with necessary furniture. Each student should bring with him two pairs of blankets, two pairs of sheets, two pillowcases, one pillow and two bedspreads for single bed.

UNIFORM.

The College uniform must be worn while on military duty by all students. It must be purchased at the College from the contractor. The uniform is of a strong gray cloth, and with care it will last a year. Each student is required to wear an overcoat during cold weather. Overcoats may be brought from home, or purchased in the city.

FREE TUITION.

Scholarships, one hundred and twenty in number, conferring free tuition, are given to needy boys of talent and character. As far as possible, these scholarships are distributed among the counties of the State. Appointments are made only by the President of the College upon written recommendation of members of the Legislature. The scholarships are not intended for people who have property. Certificates of inability to pay must be made by the applicant and endorsed by the person recommending him.

SELF-HELP.

Many students pay their own expenses, either wholly or partly, by doing various kinds of work. There is regular employment for a limited number, enabling them to earn from \$4 to \$10 a month. There is also occasional employment, paying from \$2.50 to \$5 a month. The work offered is mainly on the farm, in the barn, milking and feeding cattle, etc., and is for agricultural students only. There is very little work available for others, except serving in the dining-room. Young men should not rely upon material help from work the first year, as most of the work is given to students who have had a year's experience at the College. Application for work should be made before the student comes to college.

STUDENT LOAN FUND.

The Alumni Association of the College has established a small fund to be lent to needy students of talent and character. The loans are made at six per cent, and good security is required. Sufficient time for repayment is given to enable the student to earn the money himself. The amount lent to each student is limited. The purpose is to help young men who are willing to help themselves and who cannot find sufficient employment while in college to meet all their necessary expenses.

Contributions are solicited for this fund from students, alumni, and friends of education generally. The fund is administered by the College Bursar, under the direction of the President. At present the fund amounts to \$2,652.33.

BOARD AND LODGING.

All students are expected to board in the College mess-hall and to room in the College dormitories. An abundant supply of plain, nourishing food, with as large a variety as possible, is furnished absolutely at cost. The charge at present is \$10 per month, payable in advance.

Rooms in the College dormitories are supplied with electric lights, steam heat, and all necessary furniture, except sheets, blankets, pillowcases, pillows, bedspreads, and towels, which each student must furnish for himself. The charge for lodging is by the month, and there is no reduction in case of withdrawal.

CARE OF THE SICK.

Every effort is made to protect the health of young men in the College. Regular inspections of the entire institution are made once a year, or oftener, by the State Board of Health. Similar inspections are made monthly by the College physician.

Each student has a regular routine of daily life, including abundant physical exercise in the shops and on the drill grounds.

In case of sickness a student is taken immediately to the College Infirmary, where he receives medical attention and careful nursing.

The College physician visits the Infirmary daily at 3 o'clock P. M., and in cases of serious illness as frequently as may be required.

A trained nurse has charge of the Infirmary at all times.

COURSES OF INSTRUCTION.

The College offers the following courses of instruction:

I. Four-year Courses:

- 1st. **Agriculture** (including Agriculture, Horticulture, Veterinary Science, Biology, and Agricultural Chemistry).
- 2d. **Engineering** (including Civil Engineering, Mechanical Engineering, Electrical Engineering, Mining Engineering, and Industrial Chemistry).
- 3d. **Textile Industry or Cotton Manufacturing** (including Carding, Spinning, Weaving, Designing, and Dyeing).

These courses offer a combination of practical and theoretical work, about half of the time being devoted to lectures and recitations and the other half to work in the shops, laboratories, drawing-rooms, greenhouses, dairies, fields, and mills. They are intended to furnish both technical and liberal education. The degree of Bachelor of Science is conferred upon a graduate in the four-year course in Agriculture, in Chemistry, or in Dyeing, and the degree of Bachelor of Engineering upon a graduate of either of the other four-year courses.

II. Short Courses of one year in Agriculture, and of two years in Textile Industry, in the Mechanic Arts (including Carpentry, Wood-turning, Blacksmithing, Machine-shop Work, Drawing, and Dynamo and Engine Tending).

The short courses include nearly all the practical work of the four-year courses, with less theoretical instruction. They are intended for students who desire chiefly manual training, and do not lead to a degree.

III. Winter Courses in Agriculture and Dairying and in Textile Industry, beginning at the opening of College in January and lasting seven weeks. A one-week's course in Agriculture, beginning with the opening of the Winter Term.

IV. Normal Courses for the training of teachers along industrial lines.

V. Graduate Courses, extending over two years and leading to advanced degrees, are intended for students who have completed the Four-year Courses and who desire further instruction and training along special lines.

SCHOOL OF AGRICULTURE.

I. The Four-year Course in Agriculture.

1a. The One-year Course in Agriculture.

1b. The Seven-weeks Course in Agriculture and Dairying.

1c. The One-week Course.

Aim and Scope.—The aim of the Agricultural Courses is to train young men in both the science and the practice of their vocation. It is believed that every young man preparing to farm needs a double education—one that is practical, to fit him for his profession; another that is cultural, to fit him to live.

In order to meet the necessities of all young men who desire instruction in Agriculture, the College offers four distinct courses:

I. The Four-year Course aims to give a training that is thoroughly practical as well as scientific in Agriculture and its various branches, such as Stock-raising, Dairying, and Horticulture. The strictly technical portion constitutes about one-third of the work. Of the remaining two-thirds of the course more than one-half is prescribed in the sciences. This is done for the training and information they give, and to prepare for the technical work of the course. Because of this, and because the subject-matter and the methods of the technical portion lie so fully within the domain of science, the course is essentially scientific rather than literary. Yet the College is mindful of the fundamental character of such studies as Mathematics, English Literature, Physics, etc., and they are not neglected in this course. *Full description of the Four-year Course begins on page 29.*

1a. The One-year Course is designed to meet the needs of young men who are ambitious to excel in the vocation of farming, and who feel the need of better preparation for their life-work. The time which can be devoted to study is often limited, hence the topics in this course have been arranged in such a manner that the student is enabled to get the greatest amount of practical information in the time at his disposal.

Education and training pay on the farm as elsewhere. The young man who prepares himself for his life's work will make more rapid strides and will gain success much quicker than the one who does not.

The College has numerous calls for young men to manage farms and estates. It is able to fill only a limited number of them. Young men who have any talent along this line can fit themselves for this work by taking this course. *The One-year Course is described on page 46.*

1b. The Seven-weeks Winter Course is established to meet the needs of those who can spend only the winter at the College. The important and practical subjects of Agriculture and Horticulture and Stock-raising receive principal attention. *The Seven-weeks Course is described on page 48.*

1c. The One-week Course precedes the seven-weeks course and is devoted entirely to the study of cotton, from the preparation of the soil to the marketing of the crop. Emphasis is given soil preparation, rotation, fertilization, cultivation, seed selection, insect pests, diseases, etc.

Methods of Instruction.—Instruction is by laboratory work, supplemented by text-books, lectures, and reference readings, which are assigned from standard volumes and periodicals.

The equipment for the technical work of the course is rapidly increasing. The Dairy Department is equipped with a modern creamery for pasteurizing, separating, creaming and churning, and for investigation in dairy bacteriology.

The department makes free use of the fields, orchards, and gardens, in which the Agricultural Experiment Station conducts experiments in methods of culture, in effects of several practices on yield and on fertility, in varieties of fruit, of vegetables and of forage crops. The methods employed and the results obtained are freely used for instruction.

I. Four-year Course in Agriculture.

This course leads to the Degree of Bachelor of Agriculture.

Freshman Year.

An acceptable thesis is prerequisite to graduation in the Four-year Agricultural Course.

FOUR-YEAR COURSE IN AGRICULTURE. EQUIPMENT.

The College possesses the following equipment for instruction in Agriculture:

The farm includes six hundred and eighty-five acres, with two hundred and fifty acres under cultivation; a large three-story and basement barn fifty by seventy-two feet. The first floor is occupied by farm implements and machinery; the second story is occupied by horses, grain-bins, cutting implements, etc.; the third story, by hay, which is elevated by a Ricker and Montgomery hay-carrier. Just outside the barn are two 70-ton silos and one 125-ton silo. These are connected with a No. 18 Ohio feed and ensilage cutter. Power for cutting is supplied by an electric motor. The farm is supplied with all necessary machinery for the most successful and up-to-date farming.

The live-stock consists of necessary horses and mules, a herd of dairy cattle, and a herd of swine. The Poland China and Berkshire swine are pure bred, and from high-class specimens. Breeding-stock is sold as a part of the farm products.

The poultry plant has twenty-five breeding pens with necessary yards, the houses being of several different types best suited to poultry keeping in North Carolina, an incubator cellar with several different makes of incubators, and a brooder house, which is heated by hot water. Both indoor and outdoor brooders of several different makes are used.

There is also a feed-room equipped with steam engine, grist and bone mills.

The following varieties of poultry are kept: Barred, Buff and White Plymouth Rock; White and Buff Wyandotte; Rhode Island Red; White and Brown Leghorn; Buff Orpington, and Black Minorca.

AGRONOMY.

Subjects of Instruction.

1. **Farm Equipment.**—Lectures and recitations upon selecting, planning and equipping farms; planning and erecting farm buildings, farm vehicles, and machinery; power, water, and drainage; practical exercises in drawing plans of farms and farm buildings; leveling and laying drains, dynamometer tests of wagons and farm implements, etc. Four periods, first term. Required of Juniors. Professor NEWMAN.

2. **Soils.**—Lectures and recitations upon composition, formation, kinds and physical properties of soils and their improvement by cultivation, natural and artificial fertilizers, drainage and irrigation. Practical exercises in testing physical properties of several soils.

determining the relation of soils to heat, moisture, air, fertilizers, and mechanical analysis. Three periods, third term. Required of Juniors. Professor NEWMAN.

3. Farm Crops.—Lectures and recitations upon the history, production, harvesting, and marketing of farm crops. Practical exercises with growing and dried specimens of farm crops. Two periods, second, and five periods, third term. For Juniors. Professor NEWMAN.

4. Special Crops.—This course is designed for advanced work in farm crops. Corn and cotton are taken up in detail and studied in all their relations to farm economy. Other crops of importance are taken up as time permits. Five periods, first term; three periods, second term. For Seniors. Professor NEWMAN.

6. Farm Management.—Lectures upon history of agriculture; present agricultural methods in various countries, cost and relation; profits of various farm operations and systems. Two periods, second and third terms. For Seniors. Professor NEWMAN.

ANIMAL HUSBANDRY.

10. Breeds of Live Stock.—The origin, history and characteristics of the several breeds of live stock are studied by the students. Where possible actual specimens are used to show the breed characteristics, and where representative animals can be found within a reasonable distance, the student is permitted to visit such places. This enables the student to determine the breeds best adapted to the different conditions and environments. Two periods, first term. Required of Freshmen. Professor MICHELS.

11. Stock Judging.—Practical exercises are given in live-stock judging. The student is required, after familiarizing himself with the points of the score-card, to study the various classes of farm animals in relation to the purposes for which they are designed. The animals are compared and placed according to their relative merits, after which the reasons for so doing are written on blank forms furnished the student. Two periods, first term. Required of Juniors. Professor MICHELS.

12. Animal Breeding.—Upon the proper methods of breeding and management depends the success or failure in raising improved types of farm animals. To this end the student is taught the underlying principles or laws which govern the successful breeding and improvement of the various classes of live-stock. The experience and observation of our more successful husbandmen will constitute the foundation of this work. Lectures and recitations. Three periods, second term. Required of Sophomores. Professor MICHELS.

14. Stock Feeding.—The course in stock feeding includes a study of the physiology of the digestive system, also the best methods involved in raising and maturing farm animals for their respective uses. The feeding of the various classes of animals will be studied, and most profitable methods of feeding and management during the different periods of growth. The chief object of the course is to acquaint the student with the fundamental principles of stock feeding, after which the practical side of the question will be considered, enabling him to compound rations and calculate the nutritive ratios of same. Lectures and recitations. Four periods, third term. Required of Sophomores. Professor MICHELS.

15. Advanced Live-stock Judging.—This course will include advanced work in judging of live-stock. Particular stress will be laid on breed types of the different classes of farm animals. Heretofore only the dairy and beef types of cattle, fat and bacon types of swine, mutton and wool types of sheep have been considered. This advanced work will include judging of the particular breed types, classing under these general types, and will be a valuable means of fixing breed characteristics. Two periods, first term. Elective for Seniors. Professor MICHELS.

16. Live-stock Management, Beef and Dairy Cattle.—In this course the student will be taught the proper care and management of beef and dairy cattle. Lectures on the results obtained from the most prominent breeders and fitters of beef and dairy cattle will be given. Two periods, second term. Elective for Seniors. Professor MICHELS.

17. Live-stock Management, Horses, Sheep, and Swine.—This course includes lectures and recitations on the feed, care, and management of horses, sheep, and swine in relation to the respective uses for which they are grown. Two periods, third term. Elective for Seniors. Professor MICHELS.

DAIRYING.

Dairy Equipment.—The dairy laboratory occupies about four thousand square feet of floor space on the floor of the new Agricultural Building, besides the locker-rooms and the toilet and bath-rooms on the same floor and the dairy lecture-room on the second floor used by the dairy students.

The main dairy laboratory is thirty-six by fifty-seven feet and is fitted throughout with modern equipment suited to giving up-to-date instruction in farm dairying, retailing milk, and creamery practice. The equipment for the farm dairying consists, in the main, of De Laval, Sharples, Empire, National, and Simplex hand separators,

swing and barrel hand churns of different sizes; cream vats; hand and power butter-workers; aerators and coolers; milk-testers; and other articles useful in doing farm dairy work.

Milk testing, which plays such an important part in all phases of dairy work, receives a great deal of attention. Several sizes of hand machines and a twenty-four bottle power tester are used in this work, together with all equipment necessary for testing milk, cream, butter, cheese, skim-milk, whey, and also the lactometer.

The equipment for giving instruction in commercial dairying consists of milk pump, receiving vat, tempering vat, turbine separator, continuous pasteurizer, combined churn and butter-worker, bottling outfit, and bottle washing and sterilizing outfit.

Subjects of Instruction.

22. Dairying.—Text-book and lecture course covering the fundamental principles of modern dairying. Two periods, third term. For Freshmen. Laboratory course consists of practice in the use of modern dairy equipment. Each student is required to become familiar with the construction and operation of the leading makes of separators. Proficiency is required of the students in milk testing, standardizing milk and cream, cream ripening, churning, working, packing and scoring butter. Five periods, third term. For Freshmen. Professor MICHELS.

25. Experimental Dairying.—Lecture and laboratory practice in making butter and cheese of special commercial importance, and a critical study of dairy literature. Three periods, third term. For Seniors. Professor MICHELS.

POULTRY HUSBANDRY.

The poultry plant has twenty-five breeding pens with necessary yards, the houses being of several different types best suited to poultry keeping in North Carolina, an incubator cellar with several different makes of incubators, and a brooder house, which is heated by hot water. Both indoor and outdoor brooders of several different makes are used.

There is also a feed-room equipped with steam engine, grist and bone mills.

The following varieties of poultry are kept: Barred, Buff and White Plymouth Rock; White and Buff Wyandotte; Rhode Island Red; White and Brown Leghorn; Buff Orpington, and Black Minorca.

29. Poultry Husbandry.—Classification and study of the breeds of domestic poultry; breeding, feeding, and management; construction

and location of poultry houses; production and marketing of eggs; production, killing, and marketing of poultry; capons and caponizing; incubation and brooding. Three periods, third term. For Sophomores. Three periods, third term. Mr. JEFFREY.

30. Poultry Husbandry.—Theory and practice of judging fowls by comparison and score-card; special poultry keeping for special markets; comparison of different systems of poultry keeping; a discussion of articles by best writers in poultry press. Three periods, third term. For Seniors. Mr. JEFFREY.

VETERINARY SCIENCE.

(Anatomy, Physiology, and Veterinary Medicine.)

Equipment.

For instruction in the above subjects, the department is provided with lecture-room, two laboratories, pharmacy room (for drugs and surgical instruments), and dissecting room.

The laboratories are supplied with mounted skeletons of man, horse, and cow, with specimens of tumors, tuberculous tissues, and various other diseased tissues.

The laboratory for special work has microtome for cutting sections of tissue for study with microscope; glass slides, stands, and material for making permanent mounts. The other laboratory is supplied with the necessary equipment for conducting exercises in Physiology.

In the pharmacy room are samples of a large number of drugs used in comparative medicine, and a more or less complete set of surgical instruments, including an operating table for small animals, casting harness and slings for larger animals.

The object of the teaching in this department is not to turn out veterinarians, but to more thoroughly equip the agricultural student for the breeding and management of live-stock. In addition to the work required of all students in the agricultural courses, as outlined below, the Senior students in the four-year course in Agriculture may elect to do three periods a week during the entire year. When so elected, this work will be of a more advanced nature, but supplementary to that required of all students in the agricultural courses.

33. Animal Physiology.—The first term's work will deal largely with a study of the structure of the body, the second and third terms' work with a comparative study of the bodily functions of man and of the domestic animals. The subject will be covered by lectures and recitations, with laboratory exercises illustrating principles of physiology. Two periods, first term; four periods, second and third terms. Required of Freshmen. Doctor ROBERTS and Mr. SPOON.

34. Veterinary Anatomy.—Lectures, illustrated by charts, models, skeletons, sketches, and by dissections.

Special attention will be given to the organs of digestion and locomotion and such other parts as are of particular interest to the stock farmer. Four periods, first term. Required of Juniors. Doctor ROBERTS and Mr. SPOON.

35. Veterinary Medicine.—Lectures on the actions, uses, and doses of the most common veterinary medicines, and the nature and cause of disease, with special reference to its prevention. Four periods, second term. Required of Juniors. Doctor ROBERTS.

36. Veterinary Practice.—Lectures on the most common diseases and injuries of domestic animals, with appropriate treatment for the same. When practicable, these lectures will be illustrated by clinics, which will enable the student to become more familiar with the different diseases and perform minor surgical operations under the direction of the instructor. Two periods, third term. Required of Juniors. Doctor ROBERTS.

37. Veterinary Medicine.—Advanced course in veterinary medicine and surgery. A continuation of the subject as outlined for Juniors, special attention being given to infectious diseases communicable to man, and their significance in meat and milk inspection. Three periods. For Seniors. Doctor ROBERTS.

38. Histology.—A microscopical study of the tissues of the body. Treats of the cell as the unit of structure and of its functions; of tissues, their classification and relation to the structure organs. Four periods. Elective for Seniors. Doctor ROBERTS and Mr. SPOON.

HORTICULTURE.

The Horticultural Department occupies rooms in the Agricultural Building, including class rooms, laboratory, vegetable and fruit cold-storage rooms. It also has a large laboratory connected with the greenhouses. The laboratories are used for such work as seed selection, bud studies, propagation work, budding, grafting, transplanting, study of varieties of fruits, nuts, and vegetable seeds.

The greenhouses consist of three glass structures heated by hot water. They are used for the growing of ornamentals, vegetables, and many exotic plants; a large amount of laboratory work is also carried on in these houses. The student learns the use, importance, and culture of these plants. Many of them are also used to illustrate interesting and instructive characteristics of plant life.

The department is well supplied with apparatus for laboratory work, such as apparatus for seed testing, budding knives, grafting tools, pruning shears and saws, spray pumps, seed drills, and wheel hoes.

The College campus is used in teaching ornamental gardening and a study of economic trees and shrubs. The experimental orchards are freely used for illustrative purposes.

Laboratory work accompanies every subject, always supplementing the class work given at the same time.

Subjects of Instruction.

42. Fruit Culture.—A course treating of the location of orchards, soil for fruits, varieties, planting, cultivation, fertilizing, pruning, harvesting, and marketing of North Carolina fruits. The laboratory work will include practices in budding, grafting, making cuttings, and a discussion of the principles underlying such practices. Also a study of varieties of fruits, fruit buds, and exercises in pruning. Five periods, first term. Required of Freshmen. Associate Professor REIMER.

43. Vegetable Gardening.—This course deals with the selection and preparation of soil for vegetables, construction of hot-beds and cold-frames, fertilizing, handling of seeds, irrigation, transplanting, storing, and culture of all important vegetables. Special stress is laid on the trucking industry in North Carolina. Five periods, second term. Required of Freshmen. Associate Professor REIMER.

44. Landscape Gardening.—This course deals with the planning, arrangement, and care of home grounds, parks, and cemeteries. Special stress is laid on home grounds. It treats especially of lawns, trees and shrubs, flowers and flower beds, and the arrangement and grouping of these. The campus, city parks, and many beautiful home grounds give exceptional opportunities for this. Three periods, third term. Required of Juniors. Associate Professor REIMER.

46. Forestry.—This course consists of a study of the fundamentals of forestry. It deals especially with the need, influence, formation, care, and improvement of forests. Also the cutting, use, and handling of forest products. A study is made of the forest trees of greatest importance in America. Three periods, first term. Elective for Seniors. Associate Professor REIMER.

47. Plant Breeding.—This course includes a brief review of what has been accomplished in plant breeding and a discussion of the most important problems at the present time. It deals with the principles of plant breeding, as laws of breeding, variation and mutation, heredity,

Mendelian laws, crossing, selection, origination and improvement of varieties. The subject is treated from the horticulturist's viewpoint, dealing with fruits, vegetables, and flowers. Lectures, text-book and laboratory work. Three periods, first and second terms. More work can be taken by special arrangement if desired. Elective for Seniors. Associate Professor REIMER.

48. Floriculture.—In this course the important subject of forcing flowers and vegetables is taken up. It deals with the construction, heating, and ventilation of forcing-houses. Also the culture of the leading flowers and vegetables in such houses. Lectures and text-book. Three periods, second term. Elective for Seniors. Associate Professor REIMER.

49. Horticulture.—The last term of the Senior year the student makes a thorough study of modern experimental Horticulture. The leading horticultural investigations of the past and present are studied. A study is also made of all important literature of some horticultural subject. The latter will be chosen with reference to the student's future work. Six periods, third term. Elective for Seniors. Associate Professor REIMER.

BOTANY AND VEGETABLE PATHOLOGY.

Equipment.

Three commodious laboratories and a large recitation and lecture room are devoted to Botany, Bacteriology, and Vegetable Pathology. A research-room is provided for the use of advanced students. There are also offices for the professor and instructors; a store-room, a dark-room, an incubator-room, and a cold-room. All rooms are supplied with electricity, gas, hot and cold water, and the bacteriological laboratory is, in addition, provided with steam under 80 pounds pressure for purposes of sterilizing. The laboratories are supplied with wall-cases, shelves, herbarium cases, specimen boxes, sterilizers, incubators, microscopes, microtomes, a liberal supply of glassware, and such small utensils as are needed in the prosecution of the work. The incubator-room is fireproof and is provided with a Weisnegg regulator capable of keeping the temperature of the room practically invariable. The excellent herbarium has been mounted and is now accessible for class use. There is an extensive collection of seeds, both of weeds and cultivated plants, and the most important plant diseases are represented by herbarium and alcoholic specimens. The greenhouse is of great utility as a source of material for seed-testing and for conducting experiments in plant physiology and pathology.

55. Elementary Botany.—Weekly lectures, accompanied by laboratory work and reference reading regarding the algæ, fungi, ferns, and seed plants. Morphology is emphasized, and the broad principles of nutrition, reproduction, growth, sex, adaptation, and evolution are illustrated. Particular consideration is given to the fungi and seed plants. The principles of plant-breeding, crossing, pollination, budding, and grafting are taught. The student's knowledge is made his own through field work and simple independent investigations. Three periods. Required of Freshmen. Professor STEVENS.

56. Systematic Botany.—The student becomes acquainted with the principal orders and families of plants of North Carolina, as well as with the general problems of plant classification. Attention is given to the grouping of plants into societies and to the study of plant variation and adaptation. Three periods, third term. Required of Sophomores. Professor STEVENS.

57. Plant Diseases.—Lectures and laboratory study of the principal types of plant diseases produced by bacteria, fungi, or physiological derangement, with specific consideration of the methods of treatment. This course emphasizes the principles of plant disease and places the student in a position to employ prophylactic and remedial methods rationally. Three periods, first term. Required of Sophomores. Professor STEVENS.

58. Plant Diseases (Advanced).—Methods of culture and investigation of plant diseases. This course is intended to prepare the student for original investigation in plant diseases. Two periods. Elective for Seniors. Professor STEVENS.

59. Bacteriology.—Lectures and laboratory work on the physiology, morphology, and economy of bacteria, with especial reference to home sanitation, disinfection, and to the relation of bacteria to disease in plants and animals. The student becomes familiar in the laboratory with methods of culture and investigation in bacteriology. Two periods. Required of Juniors. Professor STEVENS and Mr. GAINES.

60. Bacteriology (Advanced).—A course designed to perfect the technique in bacteriology for those who desire to do original work in bacteriology. Work may be elected in sewage bacteriology, dairy bacteriology, bacterial plant diseases, bacteriology of manure, water, soil, or air. The course is flexible and will be made to fit the requirements of those students electing it. Two periods. For Seniors. Professor STEVENS and Mr. HALL.

61. Dairy Bacteriology.—Lecture and text-book course covering the more important facts in the relation of bacteria to dairying. Two periods, first term. For Seniors. Laboratory course consists in

demonstrating and supplementing the lecture course. Practice is given in pasteurizing milk and cream for market; making and using starters in butter and cheese-making. Three periods, first term. For Seniors. Mr. GAINES.

ZOOLOGY.

64. **Zoology.**—The fundamental principles of animal life, together with a knowledge of the structure and classification of animals, are developed by lectures, laboratory work, and text-book. One term is devoted to vertebrates and invertebrates, with only a very brief study of insects, but including some of the common parasites infecting man and the domestic animals. This course is intended to present a general view of the animal kingdom, and to lay a foundation for the more special subjects that are to follow. Four periods, first term. Required of Sophomores. Mr. SMITH.

ENTOMOLOGY.

65. **Economic Entomology.**—Elements of insect structure and classification. Injurious insects and remedies: *a.* of orchards; *b.* of small fruits; *c.* of truck and garden crops; *d.* of cotton, corn, tobacco, grains, and grasses; *e.* of forest, shade and ornamental plants; *f.* of barn, mill, and household. Lectures and demonstrations. Three periods, second term. Required of Sophomores. Mr. SMITH.

66. **Systematic Entomology.**—Systematic study of orders and families of insects, with special reference to structure, classification, life-history, and habits. Lecture and laboratory practice. Two periods, first and second terms. For Seniors. Mr. SMITH.

GEOLOGY.

69. **Geology.**—Scott's *Introduction to Geology*. In the first part of the course the principles of Dynamical Geology, the forces which have modified and are still modifying the earth, are considered. The results of those forces are seen and studied in the structure of the earth and in the phenomena of volcanoes, earthquakes, faults and folds, crust movements, etc. In the latter part of the course the life-history of the earth as recorded in the rocks is studied. Special attention is given to the commonly occurring rocks and ores, and the main features of the geology of North Carolina form an integral part of the course. The text is supplemented by lectures. Two periods, first term; three periods, second term. Required of Juniors.

CHEMISTRY.*

70. *Inorganic Chemistry*.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and Doctor WILLIAMS.

71. *Inorganic Chemistry*.—Laboratory work. Remsen's *Chemical Experiments*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class room. He records in a notebook his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. HILL.

72. *Organic Chemistry*.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Three periods. Elective for Seniors. Professor WITHERS.

73. *Analytical Chemistry*.—Treadwell's *Qualitative Analysis*. A discussion of the principles involved in chemical analysis, together with laboratory work in qualitative analysis. The student is taught to detect the presence of the common metallic elements, as well as of the acids in unknown substances. A considerable portion of the time is given to lectures and recitations upon the principles involved in the different tests, writing reactions, etc. Seven periods, first term. Elective for Seniors. Doctor WILLIAMS.

74. *Analytical Chemistry*.—Treadwell's *Quantitative Analysis*. Introductory work in gravimetric and volumetric analysis, followed by analyses of the substances most closely related to agriculture, as fertilizers, feeding stuffs, milk, butter, etc. A considerable portion of the time is given to the discussion of the principles involved in the different analytical methods. Seven periods, second and third terms. Elective for Seniors who have taken Course 73. Doctor WILLIAMS.

75. *Agricultural Chemistry*.—Snyder's *Soils and Fertilizers* and Jordan's *Feeding of Animals*. A study of the facts obtained by the application of chemistry and chemical methods of investigation to agriculture. The laws of plant and animal nutrition, the economical feeding of plants and animals, and the maintenance of the fertility of the soil are considered from the chemical standpoint. Two periods. Required of Juniors. Professor WITHERS.

76. *Bio-Chemistry*.—Lectures and recitations. A discussion of the carbohydrates, fats and proteins. Three periods. Elective for Seniors. Professor WITHERS.

*For further information, see course in Chemistry.

PHYSICS.*

78. **Elementary Physics.**—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat, sound; introduction to the study of light. Two periods. Required of Sophomores. Mr. TRUITT.

DRAWING.†

80. **Elementary Mechanical Drawing.**—Use of instruments; geometric drawing; elementary projection; isometric and cabinet drawing; drawings made to scale from working sketches of pieces of a machine. Two periods, first and second terms. Required of Sophomores. Mr. VAUGHAN.

SHOPWORK.‡

82. **Woodwork.**—Use of bench tools; working from drawings, lining, sawing, planing; practice in making simple exercises in wood; elementary exercises in wood-turning. Two periods, second and third terms. Required of Sophomores. Mr. CLAY.

MATHEMATICS.

84. **Algebra.**—Wells' *New Higher Algebra*. Begin with quadratic equations and complete compound interest and annuities, embracing ratio and proportion, variation, the progressions, the binomial theorem, undetermined coefficients and logarithms. Five periods, first term; three periods, second term. Required of Freshmen. Professor YATES, Mr. RICHARDSON and Mr. J. A. PARK.

85. **Geometry.**—Wentworth's *Plane and Solid Geometry*. Plane Geometry. Two periods, second term; five periods, third term. Required of Freshmen. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

ENGLISH.

87. **Composition and Rhetoric.**—After a review of grammatical principles, especial attention is given to the selection of subjects and the planning of essays, to the choice of words, and to the structure of sentences and paragraphs. Standard poetry and prose are read in class, and additional books are assigned for parallel reading. Frequent short themes are written. Three periods. Required of Freshmen. Professor HARRISON, Doctor SUMMEY, Mr. BONN.

*For full information in regard to the Department of Physics, see course in Electrical Engineering.

†For full information in regard to shopwork, drawing and other Mechanical Engineering subjects, see course in Mechanical Engineering.

88. American Literature.—The study of the history of American literature is accompanied with the reading and analysis in class and as parallel of the writings of representative American authors. Essays are based largely upon the class reading. Three periods. Required of Sophomores. Professor HARRISON. Doctor SUMMEY, Mr. BONN.

89. Advanced Rhetoric.—The principles of style and the forms of discourse constitute the basis of the work. Illustrative prose is studied in class, and in frequent essays and themes the students put into practice the principles learned. Two periods, first and second terms. Required of Juniors. Professor HARRISON.

90. Public Speaking.—The principles governing the preparation and the delivery of public addresses are given in text-book and in lectures. The reading in class of addresses in various styles, the writing of several papers by each member of the class, and practice in delivery, complete the work. Two periods, third term. Required of Juniors. Professor HARRISON.

91. English Literature.—The inductive study of the development of English poetry and prose is pursued in the works of standard writers of the different periods. The continuity is emphasized by a text-book on the history of the literature. Occasional essays and parallel reading form an important part of the work. The purpose of the course is to cultivate in the student a taste for the best writings of the greatest writers. Three periods. Elective for Seniors. Professor HARRISON.

MODERN LANGUAGES.

The aim of the department is to enable one to use a limited vocabulary for practical purposes in speaking and writing fluently simple sentences, without idiomatic expressions or difficult constructions, and to read scientific works, and to know the meaning of difficult constructions and idiomatic expressions of the foreign language.

A unilingual method is used, based on conversation, humoristic anecdotes, interesting short stories, and scientific articles. The student is taught to think in the foreign language by a direct association of thoughts with foreign expressions, without the medium of English.

The meaning and fluent use of foreign expressions are taught by a direct appeal to real objects, gestures, pictorial illustrations, cognates, context, comparisons, contrasts, and associations, beginning with leading simple questions, and gradually progressing to more advanced ones, frequent repetitions, and a strict adherence to the rule that

answers be always given in complete short sentences of the foreign language, and never by "yes," "no," or some other short word alone.

Grammatical and lexical details for the thorough understanding of the lesson are given. The rules are deduced from the examples, and the student is trained in their correct use by interesting connected matter.

Written examinations consist of translations from English into the foreign language, and of questions and answers in the foreign language. No English appears in an examination paper. No time is allowed for hesitancy. Answers are spoken fluently and written rapidly.

Instruction is given three hours per week.

Students may take any one or all of the modern languages during the Junior or Senior year. The work is optional, but credit towards a degree is allowed for the successful completion of the work. Work begun and continued a month may not be dropped without consent of the Faculty.

92. German.—Worman's *Modern Languages*, first and second German books; *Studien und Plaudereien*, first and second books; Fischer's *Practical Lessons in German*; *Practical German Grammar*, by Calvin Thomas; *German Reader*, by Fischer; *Scientific Reader*. Three periods. Elective for Juniors and Seniors. Doctor RUDY.

POLITICAL ECONOMY AND GOVERNMENT.

97. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. One period. Required of Juniors. Doctor SUMMEY.

MILITARY SCIENCE.

99. Drill.—School of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three periods, first and second terms; two periods, third term. Required of all classes except Seniors. Seniors are to either take drill or three extra hours in some other subject instead. Commandant and Officers of the Battalion.

100. Tactics.—Theoretical instruction in Infantry Drill, Field Service, Army Regulations, Guard Duty, and Target Practice. One period. Required of Juniors. Lieutenant YOUNG.

ONE-YEAR COURSE IN AGRICULTURE.

This course is offered for the benefit of young men who cannot afford to take the more complete four-years course. The class-room instruction and practical work is largely a condensation of the four-years course, made appropriate to the needs of young men who are unable to remain longer than one year at the College.

Students taking this course, and under twenty-one years of age, are required to pass the entrance examination for Freshman Class.

Agriculture (Elementary).—The course in Elementary Agriculture will consist of lectures and recitations from text-book on soils, crops, fertilizers, farm equipment, and farm machinery. One period per week will be devoted to practical exercises, taking up the analysis and classification of soils; identification and habit of growth of farm crops; drawing plans of farms and farm buildings. The work will be made practical and will be suited to the needs of the student. Five periods. Professor NEWMAN.

Animal Husbandry.—Study of breeds, live-stock judging and their management, animal breeding and stock feeding. Lectures will begin on all the above subjects, which will be supplemented with practical work as far as possible. Three periods. Professor MICHELS.

Dairying.—This course is designed to give a good working knowledge of farm dairy operations.

The student while in the dairy laboratory uses the leading makes of separators, churns, butter-workers, Babcock testers, etc., until he is familiar with their construction and until he becomes proficient in operating them.

The laboratory course is supplemented with lectures of a practical nature, covering the most important features of dairying. It is a course of study which should meet the requirements of the farmer and dairyman who handle dairy products, whether for home use or for commercial purposes. Five periods, first term. Professor MICHELS.

Diseases of Live-stock.—The lectures on this subject treat of elementary veterinary anatomy and physiology, the care of live-stock to prevent diseases, and the treatment of some of the most common diseases. Five periods, second term. Doctor ROBERTS.

Poultry Husbandry.—Classification and study of the breeds of domestic poultry; breeding, feeding, and management; construction and location of poultry houses; production and marketing of eggs; production, killing, and marketing of poultry; capons and caponizing; incubation and brooding. Three periods, second and third terms. Mr. JEFFREY.

Fruit Culture.—This course includes a discussion of the fruit sections of the State, and the possibilities of fruit-growing in each section. This is followed by lectures on the culture of the leading fruits. These deal with the kind of soil; preparation of soils for fruits; varieties; origination of new varieties; planting; cultivation; fertilizing; pruning; harvesting, and marketing. Emphasis is laid on the home fruit garden. Three periods, first term. Associate Professor REIMER.

Vegetable Gardening.—This course discusses the great trucking industry in the State, and the possibilities of the industry. This is followed by lectures on the best methods of growing the leading vegetables. Three periods, second and third terms.

Laboratory Work.—This includes practices in plant propagation, as budding, grafting, top-grafting, cutting; pruning of fruit and ornamental trees; fruit-bud studies; planting trees; transplanting, and construction of cold-frames and hot-beds. Associate Professor REIMER.

Diseases of Plants, Fungous and Insect.—Practical instruction will be given concerning the chief fungous or bacterial diseases, and the injurious insects attacking farm crops, fruit trees, etc.; how to recognize them and how to prevent them, including instruction concerning the preparation of spraying mixtures, the selection of spraying machinery and kindred subjects. Two periods. Fungous Diseases, Professor STEVENS. Insect Pests, Mr. SMITH.

Animal and Plant Life.—The structure of the leading types of lower animals and insects and of plants is studied and the general principles of nutrition, growth, reproduction, are discussed in an elementary and practical way. Three periods, first term. Professor STEVENS and Mr. SMITH.

Entomology.—This is a short course in which the more noxious insects are studied, with special reference to methods of preventing their injuries. The various insecticides and methods of spraying are also included in this course. Three periods, third term. Mr. SMITH.

Military Drill.—School of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours, first and second terms. Two hours, third term. Commandant and Officers of the Battalion.

WINTER SHORT COURSES IN AGRICULTURE.

ONE-WEEK COTTON COURSE.

BEGINS JANUARY 4 AND ENDS JANUARY 10, 1910.

This course is to be made strictly practical and will embrace the preparation of the soil; fertilizers for cotton; home mixing of fertilizers and manures; manner and time of applying; varieties; planting; cultivation; gathering and preparing for market; cotton judging for both breeding purposes and for market; insect, fungous and bacterial diseases affecting cotton, and the remedies for such diseases.

The main object of this cotton course is to aid those who attempt to grow more cotton and better cotton on less land; to grow it at less cost and sell it at a greater profit.

Those taking this course will have no expenses other than board and lodging. Board may be had in the mess hall at \$2.50 per week.

SEVEN-WEEKS COURSE IN GENERAL AGRICULTURE.

BEGINS JANUARY 11 AND ENDS MARCH 1, 1910.

The regular course of agricultural instruction requires four years for its completion. Many young men cannot afford to take this complete course, and for their benefit the shorter courses are offered.

No examinations are required for entrance to the seven-weeks course. Any person over sixteen years of age may enter and enjoy the full privileges of the instruction. The greater part of the instruction is given in the form of lectures and laboratory work, and the full time of the student is provided for. Some of the evenings will be taken up by lectures on important subjects and others by student meetings for their mutual improvement.

The regular work of the seven-weeks course begins January 11th, and all should arrive the day before, in order that their board and room may be arranged for, so that each man may be ready for the work when it begins.

The College is frequently called upon to supply young men to take charge of farms of wealthy owners, to operate dairies, fruit farms, truck and market gardens. The National Department of Agriculture, the State Experiment Stations, the Agricultural and Mechanical Colleges and the hundreds of commercial industries requiring scientifically trained men are eagerly seeking young men of such force and

training as is given in the Agricultural and Mechanical Colleges. The demand is greater than the supply. The teaching of agriculture in the public schools and the organization of agricultural high schools, with agricultural instruction as an important feature, have met with a serious check for no other reason than that there are not enough trained teachers to supply the demand.

EQUIPMENT.

The Agricultural Building is devoted entirely to agriculture, and contains laboratories and class rooms built and furnished especially for the purposes for which they are used. Equipment is constantly being added and facilities for instruction become better every year. The professors in each division of the Agricultural Department are specialists in their chosen work and are devoting their lives to study and to methods of improving rural life.

EXPENSES.

No tuition is charged for the seven-weeks course, and board may be had in the mess hall for \$2.50 per week. Students who expect to room in the dormitories should be provided with bedcover, sheets, pillowcases, and towels.

While engaged in work in the dairy laboratory, students are required to wear white suits. These suits may be had at \$1 apiece. The total expense of the course need not exceed \$25 over and above railroad fare.

OUTLINE OF SEVEN-WEEKS COURSE.

GENERAL AGRICULTURE.

Professor Newman.

Soils.—Study of origin, formation and classes of the soils of the State; their physical properties, natural, and induced fertility; the tillage treatment of the different classes of soils and special tillage practice for the leading crops of the State; principles and practices of farm drainage.

Farm Equipment.—Selection and laying out of farm; building of farm fences, roads, houses; tools and machinery and their economic use.

Fertilizers.—Commercial fertilizers, farm manures, green manures; composition of fertilizers and the time and method of application; special composition for special crops; mixing of commercial fertilizers.

Farm Crops.—Selection of crops to be grown and their economic relationship in farm operations; preparation and cultivation; methods of planting; seed selection and plant breeding; studies of the staple crops; corn and cotton judging.

AGRICULTURAL BOTANY.

Dr. Stevens.

This course will consist of the practical study of the diseases of plants, how to recognize them and how to prevent them; bacteria, their nature, their effects for good or harm in the farm home, and how to control them, their function in the soil as nitrogen gatherers; the cross-breeding of plants; how to accomplish it, its object, and the benefits to be derived therefrom.

FEEDS AND FEEDING AND STOCK RAISING.

24 periods.

Professor Michels.

Lectures on this subject will treat of the composition and digestibility of home-grown and commercial feeds; methods of calculating rations for different classes of farm animals, with suggestions as to the best and the most economical feeds for the different classes of live-stock.

An outline will also be given of the characteristics, care and management of the most prominent breeds of live-stock.

BREEDS OF LIVE-STOCK AND STOCK JUDGING. *24 periods.*

Professor Michels.

Lectures on this subject will treat of the characteristics of the different breeds of dairy cattle.

The practical part of the work will be given in the judging room, where the student is required to score the animals and pass upon their respective merits.

DAIRY FARMING.

Professor Michels.

Lectures, 12 periods.

Laboratory, 24 periods.

Lectures are given on the nature, composition, and secretion of milk, its uses and value as a food; the production and care of sanitary milk, management of dairy herd, details in the production of high-grade cream and butter; the marketing of dairy products, and their value when sold as milk, cream, butter and cheese.

The dairy laboratory course, given in connection with the farm dairy lecture course, consists of twenty-four periods of two hours each and comprises every detail of dairy work, butter-making, retail-

ing milk, making cottage cheese and skimmed milk, buttermilk, pasteurizing milk and cream, making and using starters, and making tests of all sorts of dairy products and standardizing milk and cream.

DAIRY EQUIPMENT.

The dairy laboratories occupy about four thousand square feet of floor space on the ground floor of the Agricultural Building, besides the locker-rooms, toilet and bath-rooms on same floor, and the dairy lecture-room on first floor, used by the dairy students.

The main dairy laboratory is thirty-six by fifty-seven feet and is fitted throughout with modern equipment, suited to giving up-to-date instruction in farm dairying, retailing milk, and creamery practice. The equipment for farm dairying consists in the main of De Laval, Sharples, Empire, National, and Simplex hand separators, swing and barrel hand churns of different sizes, cream vats, hand and power butter-workers, aerators and coolers, milk-testers, and other articles useful in doing farm dairy work.

DISEASES OF LIVE-STOCK.

21 periods.

Dr. Roberts.

The lectures on this subject will deal principally with the care and management of live-stock with a view to the prevention of diseases, but the nature, causes, and treatment of the more common diseases and injuries will also be given attention. One period each week will be devoted to a clinic, and a practical demonstration of the tuberculin test upon the dairy herd will be given during the course.

HORTICULTURE.

21 periods.

Associate Professor Reimer.

The work in Horticulture for the winter-course students will be just as practical as it is possible to make it. Lectures will be given on fruit-growing, including preparation of soil for fruits, planting, varieties, best methods of cultivation, cover crops, fertilizers and manures, and pruning.

Lectures will also be given on soils and their preparation for vegetables, fertilizers and manures for vegetables; the home vegetable garden, early and late vegetables, planting and transplanting, hot-beds and cold-frames, cultivation of vegetables.

The laboratory work will include work in budding and grafting fruit trees, planting, pruning, treatment of injured trees; and starting of vegetables in hot-beds and cold-frames.

POULTRY RAISING.*21 periods.***Mr. Jeffrey.**

The subject of poultry raising will be considered from the farm standpoint and will include poultry-house construction, the breeds of fowls most suited to the farm and their breeding, feeding, and management, egg production, market poultry, including capons and caponizing, incubation and brooding, both natural and artificial.

Those wanting more poultry work than is provided in the regular work can, in the last half of the course, have additional work of this kind, taking care of a pen of fowls, running the incubator, raising chickens in a brooder and keeping all the records necessary in poultry work.

The poultry department is equipped with twenty-five houses, a good incubator cellar with several different makes of incubators, a brooder-house, and both indoor and outdoor brooders, a feed room with steam engine and grist and bone mills. Good specimens of ten varieties of poultry best suited to farm requirements are kept, so that students may get familiar with the requirements of the different breeds.

SHORT COURSE IN ENTOMOLOGY.*21 periods.***Mr. Smith.**

Insect injury to farm crops, fruit, and vegetables amounts annually to thousands and even millions of dollars. A conservative estimate has shown that fully ten per cent. of the value of all agricultural products is destroyed each year, and yet there are many farmers who know very little of the habits and life-history of the most common insects. We should know how insects pass the winter, when they are most easily destroyed or prevented, and the best methods of combating them.

The short course in Entomology will consist of a number of lectures, illustrated by specimens, photographs, and charts, relative to insects affecting the principal crops and fruits; field observations of insects that may be studied in January and February; practical work in making and applying mixtures for destroying insects. The use of different forms of spraying apparatus will be demonstrated by practical field work performed by the students.

A little time will be given to a study of the best methods for preventing or destroying household insects.

ENGINEERING COURSES.

Four-year Courses in

- II. Civil Engineering.
- III. Mechanical Engineering.
- IV. Electrical Engineering.
- V. Mining Engineering.
- VI. Chemistry.

Two-year Course in

- IIIa. Mechanic Arts.

COURSE IN CIVIL ENGINEERING.

The aim of the course in Civil Engineering is to give such training as will enable our young men to take an active part in the work of advancing our State along material lines—developing its water-power, building railroads and public highways, constructing water supply and sewerage systems for our towns, etc. The student is given a large amount of practical work in the field and draughting-room, and acquires a fair degree of efficiency in the use of the various surveying instruments, and in draughting. At the same time it is recognized that a successful engineer requires a well-trained mind—one that reasons logically, accurately, and quickly. Therefore a thorough course is given in all those branches of Applied Mathematics which are involved in the solution of engineering problems.

The aim has been to make this pre-eminently a technical course, yet subjects of general culture are included in order to give the student a broader mental training and better preparation for social and business life.

II. The Four-year Course in Civil Engineering, leading to the degree of Bachelor of Engineering.

Freshman Year.

SUBJECTS.	PERIODS A WEEK.*		
	1st Term.	2d Term.	3d Term.
Mechanical Drawing, 136†	2	2	2
Woodwork, 146	2	2	2
Forge-work, 147	2	2	..

CIVIL ENGINEERING.

Equipment.

There is a complete equipment of all instruments necessary to civil engineering field work.

Subjects of Instruction.

101. **Descriptive Geometry, Stereotomy.**—Text-book, lectures, problems, and completed drawings. Two periods, second and third terms. Required of Sophomores in Civil Engineering. Two periods. Required of Juniors in Civil and in Mining Engineering. Mr. MANN.

102. **Graphic Statics.**—Determination of stresses in frame structures by graphical methods. Lectures and original problems. Two periods, second and third terms. Required of Juniors in Civil and in Mining Engineering. Professor RIDGICK and Mr. MANN.

103. **Surveying.**—Land surveying, leveling, elements of triangulation, topographical surveying, roadmaking. Merriman's *Land Surveying*. Two periods, first term. Required of Juniors in Civil and in Mining Engineering. Mr. VON GLAHN.

104. **Mechanics.**—Nature and measurement of forces, moments, conditions of equilibrium, moment of inertia, laws of motion, constraining and accelerating forces, dynamics of a rigid body, momentum and impact, work, power, friction, application of principles to various engineering problems. Two periods. Required of Juniors in Civil and in Mining Engineering. Three periods, first term. Required of Seniors. Mr. MANN.

105. **Construction.**—Masonry, foundations, railroads, dams, retaining walls, arches, etc. Baker's *Masonry Construction*. Lectures. Two periods, first term. Required of Juniors in Civil and in Mining Engineering. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDGICK.

106. **Railroad Engineering.**—Reconnaissance, preliminary and location surveys, cross-sections, compound curves, spirals, etc. Searles' *Field Engineering*. Two periods, second and third terms. Required of Juniors in Civil and in Mining Engineering. Two periods. Required of Seniors in Civil Engineering. Mr. MANN.

107. **Surveying.**—Field work. Use of instruments, compass, level, transit, and plane table. Practical work in land surveying, topography, leveling, railroad surveying, working up notes, and platting. Two periods. Required of Juniors in Civil and in Mining Engineering. Mr. VON GLAHN and Mr. SYKES.

108. **Surveying.**—Field work. Triangulation and topography, surveys for sewers, waterworks, etc. Two periods, first term; one period, second and third terms. Required of Seniors in Civil Engineering. Mr. MANN, Mr. SYKES and Mr. VON GLAHN.

109. Roofs and Bridges.—Determination of stresses in roof and bridge trusses by the analytical method. Merriman's *Roofs and Bridges*. Original problems. Three periods, first term. Required of Seniors in Civil Engineering. Professor RIDDICK.

110. Bridge Design.—Calculation of stresses, design, specifications, and estimate of cost of a wooden roof truss and a steel highway bridge. Four periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

111. Municipal Engineering.—Text-books, lectures. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

112. Road Building.—Text-book on construction of roads, streets, and pavements. Lectures on practical roadmaking in North Carolina. Two periods, first term. Required of Seniors in Civil Engineering. Professor RIDDICK.

113. Astronomy.—Determination of Azimuth, Latitude and Longitude, Time. Comstock's *Astronomy for Civil Engineers*. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

114. Reinforced Concrete.—Turneaure & Maurer's *General Theory of Concrete and Steel Construction*. Problems in beams, columns, retaining walls, etc. Two periods, second and third terms. Required of Seniors in Civil Engineering. Mr. MANN.

115. Mechanics of Materials.—Study of stresses in beams, columns, etc. Merriman's *Mechanics of Materials*. Three periods, first term. Required of Seniors in Civil and in Mechanical Engineering. Professor RIDDICK.

116. Hydraulics.—Methods of measuring flow of streams, laws governing flow in pipes and conduits, determination of water power in streams, testing of hydraulic motors. Text-book, Merriman's *Hydraulics*. Two periods, second and third terms. Required of Seniors in Engineering. Professor RIDDICK.

ARCHITECTURE.

125. Architecture.—Building materials, methods of constructing buildings, plans, specifications, bill of materials, estimate of cost, design of buildings. Lectures. Two periods, first term. Required of Sophomores in Civil Engineering. Professor RIDDICK.

126. Architectural Drawing.—Drawings from a building already constructed, design of a dwelling, detail and perspective drawings. Two periods. Required of Sophomores in Civil Engineering. Mr. MANN and Mr. VON GLAHN.

COURSE IN MECHANICAL ENGINEERING.

The regular four-year course in Mechanical Engineering is intended to train the student for positions of trust and responsibility in engineering work, and also to furnish him with a basis for carrying on of more advanced engineering studies. The course treats of the development and transmission of power, the design and construction of machines, and the calibration and efficiency tests of machinery, boilers, and engines.

The two-year course is offered to students who wish to become machinists, draughtsmen, or stationary engineers. For entrance to this course a less degree of academic preparation is required than for entrance to the four-year Engineering Course.

III. The Four-year Course in Mechanical Engineering, leading to the degree of Bachelor of Engineering.

Freshman Year.

MECHANICAL ENGINEERING.

Equipment.

The drawing and recitation rooms and shops of the Department of Mechanical Engineering are in the Engineering Building. They are of ample size and well lighted, and are arranged to be heated either by the exhaust steam from the engine or by live steam. On the first floor are the steam laboratory, machine shop, forge shop, wood-turning and carpenter shop, office, and library. On the second floor are the recitation room and two drawing-rooms. In the office are kept on file various scientific and technical journals, the trade circulars of prominent engineering firms, drawings and photographs of machinery, and tabulated data, as well as a large number of engineering books available for the use of students.

The department is provided with the necessary apparatus for making boiler and engine tests and for other work of an experimental character. The equipment consists of a two-horse-power engine, a ten-horse-power engine, a one-horse-power gasoline engine (all of which were built by students), a two-horse-power International gasoline engine, a two-horse-power McVicker automatic gasoline engine, a twenty-five-horse-power Woodbury engine, a Wheeler surface condenser, connected with a $4\frac{1}{2} \times 6 \times 6$ Blake air pump, an Ericsson hot-air pumping engine, apparatus for making analyses of flue gases, a fuel calorimeter, a water motor, a Worthington water meter, a complete Westinghouse airbrake equipment, a New York airbrake equipment in section, friction brakes, weirs, indicators, planimeters, slide rules, thermometers, calorimeters, gauges, tanks, scales, a Crosby gauge tester, two hydraulic rams, a 15,000-pound Olsen testing machine, and other apparatus for making tests.

The shops are equipped as follows:

The woodworking equipment consists of fifteen double carpenters' benches, which accommodate thirty students, and all necessary tools for each bench; thirty 12-inch turning lathes, each lathe being fully equipped with turning tools; a rip and a cut-off saw bench, foot-feed, with dado attachment; a double revolving rip and cut-off saw bench, with dado attachment; a 20-inch surface planer; a 12-inch hand-jointer or buzz planer; a universal boring machine; a $6\frac{1}{2}$ -inch tenoning machine with cope heads; a 6-inch sash and blind sticker; a 34-inch band saw; a jig saw; a shaper or edge-moulding machine, with a very complete set of moulding cutters; a chain-mortiser; a dovetailing machine; a 38-inch grindstone; a wood trimmer; an adjustable miter box; a steam glue-heater, and a large assortment of screw and bar clamps, both iron and wooden.

The forge shop is a well-lighted and ventilated, neatly-paved room, thirty by forty feet. It is equipped with twenty-eight forges, blast being furnished from a Sturtevant blower; two emery and two buffing wheels; a Buffalo Forge Company's hand drill; an overhead exhaust system, operated by a 60-inch Sturtevant exhaust fan, for removing smoke from the fires; anvils and all necessary hand tools.

The machine shop contains a 16-inch Davis & Eagan lathe with 10-foot bed, 14-inch Windsor lathe with 5-foot bed, a 13-inch Barnes lathe with 5-foot bed, a 14-inch Putnam lathe with a 4-foot bed, a 14-inch Flather lathe with 6-foot bed, three 14-inch lathes with 6-foot bed (built in the College shops by students), a 26-inch by 44-inch by 12-foot bed McCabe double-spindle lathe, an 18-inch Prentiss shaper, a 24-inch upright Bickford drill press, 32-inch American drill press, a

Brown & Sharpe universal milling machine with all attachments, a 20-inch by 5-foot Pease planer, one large and one small emery tool-grinding machine, a 6-inch Curtis & Curtis pipe-threading and cutting machine, a Greenwich arbor press and an electric center grinder, a Whiton centering machine, and a Twist drill grinder. The machines have full equipment of chucks, rests, and tools. The benches are well provided with vises.

The foundry occupies a separate building 30x60 feet and is of capacity to accommodate about 30 students. It contains two Griffin oil-burning furnaces, one for cast iron, one for brass, a No. 0 Sturtevant high-pressure blower for furnishing air, and a small triplex pump for furnishing oil under pressure. There is also a crucible brass furnace, a cadet core oven, and all necessary tools for bench and floor work. A 36-inch cupola is being installed, which will add greatly to the benefit to be received from foundry work. The power for the shops is furnished by electric motors.

Subjects of Instruction.

136. Mechanical Drawing.—Work in the use of the pencil; technical sketches of objects, usually parts of a machine; use of instruments, and tracing. Geometric drawing, isometric and cabinet drawing, elementary projections, drawings made to scale from working sketches of pieces of a machine. Elementary principles of Descriptive Geometry, cylinders, cones, and prisms, intersections, development of surfaces. Miscellaneous problems. Two periods. Required of Freshmen. Mr. VAUGHAN.

139. Mechanical Drawing.—Working sketches and drawings of machine parts from the model. Tracing and blueprinting. Elementary machine design. Cam design. Two periods. Required of Sophomores in Mechanical, Electrical, and Mining Engineering. Mr. ELLIS.

140. Machine Design.—Study of the communication of motion by gear wheels, belts, and link work; automatic feed, parallel and quick return motions. Calculations and working drawings of machine parts, such as fastenings, hangers, couplings, and bearings. Boiler design. Estimating and checking of working drawings. Two periods. Required of Juniors in Mechanical and Electrical Engineering. Mr. ELLIS.

141. Machine Design.—Estimating, checking of working drawing, original design. Calculations and working drawings of types of steam engines, gas engines, gas producers, pumps, condensers, shafting, etc. Three periods. Required of Seniors in Mechanical Engineering. Mr. ELLIS.

146. Woodwork.—Use of bench tools, working from drawings, lining, sawing, planing. Practice in making simple exercises in wood. Elementary exercises in woodturning. Two periods. Required of Freshmen. Mr. CLAY.

147. Forge-work.—Exercises in working with iron and steel. Welding, tempering and casehardening. Uses and care of forge tools and fires. Two periods, first and second terms. Required of Freshmen. Mr. WHEELER.

148. Foundry.—Recitations and exercises in foundry work; including molding, core-making, the management of the cupola furnace and the crucible furnace in iron and brass melting. Two periods. Required of all Freshmen third term, and of Sophomores in Mechanical and Electrical Engineering first term. Mr. WHEELER.

149. Pattern Making.—Exercises in making patterns and moulds of machine parts. Two periods, second and third terms. Required of Sophomores in Mechanical, Electrical, and Mining Engineering. Mr. CLAY.

150. Machine-shop Work.—Bench and machine work. Exercises in chipping and filing. Exercises in lathe work, boring, reaming, drilling, planing, milling, and shaper work. Two periods. Required of Juniors in Mechanical and Electrical Engineering. Mr. PARK.

151. Machine-shop Work.—Making the parts of some machine, or of an engine. Making tools, such as taps and reamers. Laying out work. Working from drawings, duplicate and interchangeable parts. Working to standard gauges. Two periods. Required of Seniors in Mechanical Engineering. Mr. PARK.

In all practical courses the student's attention is directed to cost of production and its principal elements—time and method.

158. Steam Engines and Boilers.—A study of the structural details of modern steam engines; the slide valve, both in its simple form and when used in combination with independent cut-off valves; link motion and other reversing gears; and the Zeuner diagram. Attention is given to the effect of the reciprocating parts and a study of inertia and tangential pressures; also a study of the steam engine indicator, of indicator rigging, and of steam distribution as disclosed by the indicator.

The various forms of steam boilers are studied, and the methods employed in their construction noted. The number and size of tubes and flues, the thickness of plates, strength of different styles of riveting, kinds of bracing, amount of grate and heating surface, different kinds of steam and water gauges, safety valves and injectors; the causes and methods of preventing foaming, incrustation and corrosion; the manner of setting boilers, and of operating them with safety and economy; feed water heaters; mechanical stokers; smoke con-

sumers and chimneys are studied in detail. Two periods. Required of Juniors in Mechanical and Textile, and Seniors in Electrical and Mining Engineering. Professor SATTERFIELD.

160. Transmission of Power.—This work includes a study of the methods employed for the transmission and measurements of power in machine shops and factories, and review of experiments which have been made to determine the efficiency of various systems of power-transmission machinery. Two periods, third term. Required of Seniors in Mechanical Engineering. Professor SATTERFIELD.

161. Power Plants.—Mechanical Engineering of power plants. Selection and arrangement of machinery, appliances, piping. Three periods, first term. Required of Seniors in Mechanical Engineering. Professor SATTERFIELD.

162. Gas Engines.—Theory of the gas engine. Various types of gas, gasoline, and oil engines. Brake and indicated horse-power; efficiency. Gas producers. Three periods, first term. Required of Seniors in Mechanical Engineering. Professor SATTERFIELD.

163. Refrigeration.—Various types of ice-making machinery. Compression and absorption systems. Carbon dioxide and compressed-air machines. Three periods, second term. Required of Seniors in Mechanical Engineering. Professor SATTERFIELD.

165. Pumping Machinery.—Direct acting, fly-wheel and duplex and centrifugal pumps. Pumping engines. Waterworks machinery. Duty and efficiency. Hydraulic engines. One period, second term. Required of Seniors in Mechanical Engineering. Professor SATTERFIELD.

166. Heating and Ventilation.—Steam, hot water, furnace and blower systems of heating. Heating boilers. Ventilation. Design of heating and ventilating system. Three periods, third term. Required of Seniors in Mechanical Engineering. Professor SATTERFIELD.

167. Structural Engineering.—The manufacture and uses of different metals—rolled sections used in bridge, structural work, and general engineering. Two periods, second and third terms. Required of Seniors in Mechanical Engineering. Mr. ELLIS.

168. Steam Engineering Laboratory.—Practice in engine running; valve-setting; calibration of instruments; testing gauges and lubricants. Use of indicators and calorimeters. Boiler tests; engine tests. Two periods; required of Seniors in Mechanical Engineering. One period; required of Seniors in Electrical Engineering. A brief course in Surveying is given, so as to enable a student to locate buildings, foundations, line up shafting, engines, and machinery by the use of transit and level. Professor SATTERFIELD and Mr. ELLIS, Mr. VAUGHAN and Mr. CLAY.

169. Mechanics.—Nature and measurement of forces, moments, conditions of equilibrium, moment of inertia, laws of motion, constraining and accelerating forces, dynamics of a rigid body, momentum and impact, work, power, friction, application of principles to various engineering problems. Preparatory to Applied Mechanics in Senior year. Two periods. Required of Juniors in Mechanical and Electrical Engineering. Mr. VAUGHAN and Mr. ELLIS.

170. Applied Mechanics.—A study of the laws of equilibrium and motion as applied to a particle and to rigid bodies; analytic treatment of stresses in framed structures, center of gravity, moment of inertia, work and energy, and friction; mechanics of materials, including stresses and deformations in tension, compression, shearing, torsion, and flexure; stresses and deformation in long columns, continuous girders, arch ribs, and reinforced concrete, and the elements of the theory of elasticity. Three periods, first and second terms; two periods, third term. Required of Seniors in Mechanical and Electrical Engineering. Mr. ELLIS and Mr. VAUGHAN.

COURSE IN ELECTRICAL ENGINEERING.

Object.—The four-year course is designed for those who wish a thorough and practical training in Electrical Engineering. Only a most thorough training in the fundamental facts and principles of the science of electricity and magnetism will be satisfactory for a branch of engineering which is advancing so rapidly. A great deal of attention is, therefore, paid to good text-book work, and as soon as the first principles of the science are mastered by the student he is given a series of experiments in which careful measurements with exact instruments are made.

The department, as can be seen from the list of apparatus, is well equipped with dynamos, electric motors, and testing instruments for experimental work and for investigation of problems in electrotechnics. During the Senior and Junior years a course in designing the various electrical machines is given.

PHYSICS.

Equipment.

The recitation-rooms and laboratories of the Department of Physics are situated in the basement of the principal building. They are spacious and well lighted.

The equipment consists of apparatus for illustrating the principles of physical science and for instruction and practice in experiments, measurements, and tests.

Subjects of Instruction.

176. Elementary Physics.—Properties of matter: fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound, and light. Text-book used: Milliken & Gale's *First Course in Physics*. Four periods. Required of Freshmen in Engineering courses. Mr. SPRAGUE and Mr. TRUITT.

177. Elementary Lessons in Electricity and Magnetism.—Text-book used: *Elementary Electricity and Magnetism*, by D. C. & J. P. Jackson. Two periods. Required of Sophomores. Professor BROWNE.

178. Physical Laboratory.—Practice in handling units in British and metric systems. Experiments in mechanics, illustrating addition and composition of forces, the lever, the inclined plane, the pendulum, density, and specific gravity, and Boyle's law. Experiments in heat, sound, and light, covering the following subjects: Thermometer calibration, calorimetry, hygrometry, expansion, wave lengths of sounds, laws of strings, laws of lenses and mirrors, refraction, photometry, and spectroscope. Text-book used: Cheston-Dean-Timmerman's *Laboratory Course in Physics*. One period. Mr. SPRAGUE and Mr. TRUITT.

179. Physical Laboratory.—Continuation of Course 178. Elementary experiments in magnetism. The electric circuit. Primary batteries. Measurement of electro-motive force, current, and resistance. Telegraph and telephone circuits. One period. Required of Sophomores in Electrical, Mining, and Mechanical Engineering, and in Chemistry. Mr. SPRAGUE.

ELECTRICAL ENGINEERING.

Equipment.

For this course two laboratories are equipped: one known as the instrument laboratory, in which measuring instruments and apparatus are kept, and the other as the dynamo laboratory, containing generators, motors, transformers, switchboards, etc. The instrument lab-

oratory is provided with direct and alternating current voltmeters, ammeters, and wattmeters, Wheatstone bridges, galvanometers, condensers, etc. It is supplied from the central power-house with direct and alternating currents of any voltage, phase, or frequency for use in checking instruments and making measurements. The dynamo laboratory is a small one-story brick building 30 x 50 feet, and is equipped with a 3-phase synchronous motor coupled directly to a line shaft arranged to drive small generators, an 11.5 k. w. 110-volt Westinghouse d. c. generator, 20 k. w. 2-phase 110-volt Lincoln alternator, one 6-light T. H. arc-lighting generator, one 1-horse-power Sprague motor, one 8 k. w. 110-volt Siemens & Halske generator, one 2-horse-power 3-phase 110-volt G. E. induction motor, one 2 k. w. 110-volt LaRoche single-phase alternator, two $2\frac{1}{2}$ k. w. 110-volt 3-phase generators, two $2\frac{1}{2}$ k. w. 125-volt compound wound d. c. generators with series coils for use as series motors or generators, one $2\frac{1}{2}$ k. w. 110-volt a. c. rotary converter. The laboratory also contains constant potential and constant current transformers, condensers, circuit-breakers, etc., and a switchboard well equipped with voltmeters, ammeters, frequency indicators, etc.

The central power station is also available for student use, the equipment consisting of a 75 k. w. 600-volt 3-phase Crocker-Wheeler generator coupled to a Skinner engine, two 50 k. w. 300-volt 3-phase Crocker-Wheeler generators coupled to a 150-horse-power De Laval steam turbine, one 9.5 k. w. 125-volt Westinghouse d. c. exciting generator, and switchboard provided with meters, instrument transformers, oil circuit-breakers, wattmeters, synchroscope, etc.

The department possesses a small library of standard books on all branches of Physics and Electrical Engineering.

183. Electrical Engineering.—The magnetic circuit. Electrical measurements. Electro-magnetic induction. Storage batteries. Arc-lighting. Incandescent lighting. Interior wiring. Dynamos and dynamo design. Direct current motors. Management and operation of dynamos and motors. Text-books used: Franklin & Esty's *Elements of Electrical Engineering* and Hay's *Continuous Current Engineering*. Two periods. Required of Juniors in Mechanical and Electrical Engineering. Professor BROWNE and Professor WALTER.

184. Electrical Engineering.—Practice in calculating circuits containing resistance, inductance, and capacity. Alternators. Theory of transformers, induction motors, a. c. series motors, and repulsion motors. Power transformation and measurement. Text-book used: Franklin & Esty's *Alternating Currents*. Three periods. Required of Seniors in Electrical Engineering. Professor BROWNE and Professor WALTER.

185. Electrical Engineering.—Line construction. Switchboards and appliances. Electric power stations. Illumination. Electric car equipment. Motors and controllers. Line and track. Line calculations. Multiple unit systems. Text-book used: *Standard Handbook for Electrical Engineers*. Two periods. Required of Seniors in Electrical Engineering. Professor BROWNE and Mr. DORSEY.

186. Electrical Engineering Laboratory.—Practice in varying the ranges of ammeters and voltmeters. Various methods of measuring resistance. Permeability and hysteresis tests. Practice with direct current generators and motors. Characteristic curves. Efficiency tests. Two periods. Required of Juniors in Electrical Engineering. Mr. DORSEY.

190. Electrical Engineering Laboratory.—Senior year. Coupling d. c. generators for parallel, series and three-wire operation. Stray power tests. Kapp's pumping-back method. Heat test of a d. c. dynamo. Series and parallel a. c. circuits. Plating vector diagrams. Experiments with a. c. generators, induction and synchronous motors, transformers, etc. Text-book used: *Sever & Townsend's Laboratory and Factory Tests*. Two periods. Required of Seniors in Electrical Engineering. Mr. DORSEY.

191. Electrical Design.—Design of Rheostats, Heating Devices, Controllers and Electro-magnets. Two periods. Required of Juniors in Electrical Engineering. Professor WALTER.

192. Electrical Design.—Design of Transformers, Direct Current Generators, Alternators, Induction Motors, and Rotary Converters. Two periods. Required of Seniors in Electrical Engineering. Professor WALTER.

193. Electrical Engineering Seminary.—Review of the current electrical engineering periodicals. One period. Required of Seniors in Electrical Engineering. Professor BROWNE.

COURSE IN MINING ENGINEERING.

The course in Mining Engineering is intended to give the student the preliminary training necessary to enable him to enter upon a career in mining. To this end he is given instruction in English, History, Political Economy, and Mathematics, which are fundamental to the more technical studies and to the greatest usefulness as a citizen. Instruction in Physics and Chemistry, Mineralogy and Geology, Surveying, Shop-work, Drawing, Machinery, and Steam affords the scientific and engineering knowledge upon which the successful work of the miner must depend. The more technical portion of the instruction includes ore dressing, metal-working, ventilation, drainage, and illumination of mines.

MINING AND METALLURGY.

206. Mining.—Lectures on methods of mining, including prospecting, sinking, sloping, hoisting, pumping, and ventilating; the location of mining claims, mine fires, fire-damp and dust explosions; inundations; rescue and relief of men. Four periods, second and third terms. Required of Seniors in Mining.

207. Ore Dressing.—Furnishing products for metallurgical treatment. Lectures on concentrating machinery and concentrating and enriching ores by mechanical means. Four periods, first term. Required of Seniors in Mining.

208. Metallurgy.—Introductory: combustion, calorific calculations, fuels, refractory materials, furnaces, etc. Iron and steel: the various iron and steel processes, metallography, heat treatment, mechanical treatment, chemistry. Copper: roasting, smelting, refining, wet and electrolytic processes. Gold: stamp milling, amalgamation, cyanide and chlorination processes. The metallurgy of lead and the lesser metals. Two periods, second and third terms. Required of Seniors in Mining.

209. Assaying.—Ricketts & Miller's *Notes on Assaying*. Lectures and laboratory practice in the crushing and sampling of ores; the assaying of gold, silver, lead, and other ores; corrected assays; bullion assays; extraction tests. Two periods, second and third terms. Required of Seniors in Mining.

GEOLOGY AND MINERALOGY.

211. Geology.—Scott's *Introduction to Geology*. In the first part of the course the principles of Dynamical Geology, the forces which have modified and are still modifying the earth, are considered. The results of these forces are seen and studied in the structure of the earth and in the phenomena of volcanoes, earthquakes, faults and folds, crust movements, etc. In the latter part of the course the life-history of the earth as recorded in the rocks is studied. Special attention is given to the commonly occurring rocks and ores, and the main features of the geology of North Carolina form an integral part of the course. The text is supplemented by lectures. Two periods. Required of Seniors in Mining.

212. Mineralogy.—Moses & Parsons' *Mineralogy*. Descriptive and determinative mineralogy; blowpipe analysis and the study of the more important minerals, their properties, uses, and methods of determination. Recitations and laboratory practice. Four periods, first term. Required of Seniors in Mining.

COURSE IN CHEMISTRY.

In harmony with the general purposes for which the College was founded, the course in Chemistry is arranged to prepare young men for careers in that department. To this end the training given in general, organic, and analytical chemistry is supplemented by instruction in technical chemical analysis and in applied chemical subjects. The kindred scientific subjects of Biology and Physics and the fundamental principles of engineering, are taught, together with the cultural studies included in the other courses.

The chemical laboratories of the North Carolina Department of Agriculture and of the North Carolina Agricultural Experiment Station afford the student an opportunity to keep in touch with the methods of research in this department of agricultural science.

The State Museum is open to the public each day, and among other things contains a very excellent collection of the State's minerals, ores, and building stones.

There are in the city of Raleigh and its vicinity several manufacturing plants to which, through the courtesy of the owners, the students in chemistry, in company with the teaching staff of the department, make visits each year. These include plants for the manufacture of illuminating gas, sulphuric acid, fertilizers, and ice; for the extraction of cotton-seed oil; and for the dyeing of cotton goods.

CHEMICAL EQUIPMENT.

The laboratories of general and analytical chemistry are located in the main building of the College, and are well furnished. The tables are of yellow heart-pine with oak tops. Each student is provided with water, gas, all necessary reagents, ample working space, together with lockers for the storage of apparatus, etc. The quantitative laboratory is located on the first floor and will accommodate thirty-two students. The laboratory for introductory chemical work is in the basement and will accommodate one hundred and eighteen students.

The chemical library is well supplied with reference books. It receives the leading chemical journals and owns complete sets of many of the most important of them.

VI. The Four-year Course in Chemistry, leading to the degree of Bachelor of Science.

Freshman Year.

Military Drill, 299.....	3	3	2

CHEMISTRY.

216. Inorganic Chemistry.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and Doctor WILLIAMS.

217. Inorganic Chemistry.—Laboratory work. Remsen's *Chemical Experiments*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. HILL.

218. Organic Chemistry.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Three periods. Required of Juniors in Chemistry. Professor WITHERS and Doctor WILLIAMS.

220. Analytical Chemistry.—Treadwell's *Qualitative Analysis*. A discussion of the principles involved in chemical analysis, together with laboratory work. The student is taught to detect the presence of the common elements in unknown substances. Seven periods, first term. Required of Juniors in Chemistry. Doctor WILLIAMS.

226. Analytical Chemistry.—Treadwell's *Quantitative Analysis*. Gravimetric and volumetric analysis, special attention being given to the analysis of substances of agricultural and technical importance. Seven periods, second and third terms. Required of Juniors in Chemistry. Seven periods. Required of Seniors in Chemistry. Doctor WILLIAMS.

228. Organic Chemistry.—Laboratory work. Orndorff's *Laboratory Manual* and Gattermann's *Practical Methods of Organic Chemistry*, translated by Shober. The typical transformations and syntheses of the aliphatic and aromatic groups are taken up. The student thus becomes familiar with the reactions and properties of the more important organic compounds. Four periods. Required of Seniors in Chemistry. Doctor SYME.

233. Bio-Chemistry.—Lectures and recitations. A discussion of the carbohydrates, fats and proteins. Three periods. Required of Seniors in Chemistry. Professor WITHERS.

BOTANY.

241. Elementary Botany.—Weekly lectures, accompanied by laboratory work and reference reading, regarding the algæ, fungi, ferns, and seed plants. Morphology is emphasized, and the broad principles of nutrition, reproduction, growth, sex, adaptation, and evolution are illustrated. Particular consideration is given to the fungi and seed-plants. The principles of plant breeding, crossing, pollination, budding, and grafting are taught. The student's knowledge is made his own through field work and simple independent investigations. Three periods. Required of Sophomores in Chemistry. Professor STEVENS.

BACTERIOLOGY.

251. General Bacteriology.—Lectures and laboratory work on the nature, physiology, morphology, and economy of bacteria, with especial reference to home sanitation, disinfection, and to the relation of

bacteria to disease in plants and animals. The student becomes familiar in the laboratory with methods of culture and investigation in bacteriology. Two periods. Required of Juniors in Chemistry. Professor STEVENS and Mr. GAINES.

252. **Bacteriology, Advanced.**—A course designed to perfect the technique in bacteriology for those who desire to do original work in bacteriology. Work may be elected in sewage bacteriology, dairy bacteriology, bacterial plant diseases, bacteriology of manure, water, soil, or air. The course is flexible and will be made flexible to fit the requirements of those students taking it. Two periods. Required of Seniors in Chemistry. Professor STEVENS and Mr. HALL.

MATHEMATICS.

While the subject of mathematics is presented in such a manner that the student obtains a thorough working knowledge of those principles which he needs in his Engineering Courses, yet, at the same time, it is not the purpose to subordinate the general theory of Mathematics to the practical side. The work consists of recitations, written exercises and lectures, the scope being quite sufficient for the needs of the institution.

263. **Algebra.**—Wells's *New Higher Algebra*. Begin with quadratic equations and complete compound interest and annuities, embracing ratio and proportion, variation, the progressions, the binomial theorem, undetermined coefficients and logarithms. Five periods, first term; three periods, second term. Required of Freshmen. Professor YATES, Mr. RICHARDSON and Mr. J. A. PARK.

264. **Geometry.**—Wentworth's *Plane and Solid Geometry*. Plane Geometry. Two periods, second term; five periods, third term. Required of all Freshmen. Professor YATES, Mr. RICHARDSON, and Mr. J. A. PARK.

265. **Solid Geometry.**—Required of Sophomores. Five periods, first term. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

266. **Advanced Algebra.**—Wells's *New Higher Algebra*. Permutations, combinations, continued fractions, summation of series, general theory of equations, and the solution of higher equations, etc. Required of Sophomores. Three periods, second term. Professor YATES and Mr. RICHARDSON.

267. **Trigonometry.**—Wells's *Plane and Spherical Trigonometry*. Plane Trigonometry. Solution of plane triangles, triangulation, etc. Spherical Trigonometry. Solution of spherical triangles. Required of Sophomores. Two periods, second term; five periods, third term. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

268. Analytical Geometry.—Nichols's *Analytical Geometry*. Loci of equations, straight line, circle, parabola, ellipse, hyperbola, a discussion of the general equation of the second degree, higher plane curves and geometry of three dimensions. Five periods, first and second terms. Required of Juniors in Engineering. Professor YATES.

269. Differential and Integral Calculus.—Osborne's *Elements of Calculus*. A thorough treatment of the fundamental principles and derivation of formulæ; applications to various problems, such as expansion into series, evaluation of undeterminate forms, maxima and minima, radius of curvature, lengths of curves, areas, volumes, etc. Five periods, third term. Required of Juniors. Two periods, first term. Required of Seniors. Professor YATES.

ENGLISH.

272. Composition and Rhetoric.—After a review of grammatical principles, especial attention is given to the selection of subjects and the planning of essays, to the choice of words, and to the structure of sentences and paragraphs. Standard poetry and prose are read in class, and additional books are assigned for parallel reading. Frequent short themes are written. Three periods. Required of Freshmen. Professor HARRISON, Doctor SUMMEY, Mr. BONN.

273. American Literature.—The study of the history of American literature is accompanied with the reading and analysis in class and as parallel of the writings of representative American authors. Essays are based largely upon the class reading. Three periods. Required of Sophomores. Professor HARRISON, Doctor SUMMEY, Mr. BONN.

274. Advanced Rhetoric.—The principles of style and the forms of discourse constitute the basis of the work. Illustrative prose is studied in class, and in frequent essays and themes the students put into practice the principles learned. Two periods, first and second terms. Required of Juniors. Professor HARRISON.

275. Public Speaking.—The principles governing the preparation and the delivery of public addresses are given in text-book and in lectures. The reading in class of addresses in various styles, the writing of several papers by each member of the class, and practice in delivery, complete the work. Two periods, third term. Required of Juniors. Professor HARRISON.

276. English Literature.—The inductive study of the development of English poetry and prose is pursued in the works of standard writers of the different periods. The continuity is emphasized by a

text-book on the history of the literature. Occasional essays and parallel reading form an important part of the work. The purpose of the course is to cultivate in the student a taste for the best writings of the greatest writers. Three periods. Elective for Seniors. Professor HARRISON.

MODERN LANGUAGES.

The aim of the department is to enable one (*a*) to use a limited vocabulary for practical purposes in speaking and writing fluently simple sentences without idiomatic expressions or difficult constructions, and (*b*) to read scientific works and to know the meaning of difficult constructions and idiomatic expressions of the foreign language.

A unilingual method is used, based on conversation, humorous anecdotes, interesting short stories, and scientific articles. The student is taught to think in the foreign language by a direct association of thoughts with foreign expressions without the medium of English.

The meaning and fluent use of foreign expressions are taught by a direct appeal to real objects, gestures, pictorial illustrations, cognates, context, comparisons, contrasts, and associations, beginning with leading simple questions and gradually progressing to more advanced ones, frequent repetitions, and a strict adherence to the rule that answers be always given in complete short sentences of the foreign language and never by "yes," "no," or some other short word alone.

Grammatical and lexical details for the thorough understanding of the lesson are given. The rules are deduced from the examples, and the student is trained in their correct use by interesting connected matter.

Written examinations consist of translations from English into the foreign language and of questions and answers in the foreign language. No English appears in an examination paper. No time is allowed for hesitancy. Answers are spoken fluently and written rapidly.

Instruction is given three hours per week. The work is optional, but credit towards a degree is allowed for the successful completion of the work. Work begun and continued a month may not be dropped without consent of the Faculty.

The languages taught are German for students of Chemistry and Mechanical Engineering, and Spanish for Civil and Electrical Engineering students.

277. German.—Worman's *Modern Languages*, first and second German books; *Studien und Plaudereien*, first and second books; Fischer's *Practical Lessons in German*; *Practical German Grammar*, by Calvin Thomas; *German Reader*, by Fischer; *Scientific Reader*. Elective for Juniors or Seniors. Doctor RUDY.

278. French.—Worman's *Modern Languages*, first and second French books; Worman's *Grammaire Francaise*; selected short stories of French literature, and scientific readers. This subject may be taken by special petition to the Faculty. Doctor RUDY.

279. Spanish.—Worman's *Modern Languages*, first and second Spanish books; *Introduccion a la Lengua Castellana*, Marion y Des Garrenes; a *Spanish Grammar* to be selected; Fontaine's *Flores de Espana*, and other short stories of Spanish literature; *Modelos para Cartas*. Elective for Juniors and Seniors in Civil and Electrical Engineering. Doctor RUDY.

POLITICAL ECONOMY.

297. This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. Required of Juniors. One period. Doctor SUMMEY.

MILITARY SCIENCE.

299. Drill.—School of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours, first and second terms; two hours, third term. Required of all classes except Seniors. Seniors are either to take drill or three extra hours in some other subject instead. Commandant and Officers of the Battalion.

300. Tactics.—Theoretical instruction in Infantry Drill, Field Service, Army Regulations, and Guard Duty. One period. Required of Juniors. Lieutenant YOUNG.

THE TWO-YEAR COURSE IN MECHANIC ARTS.

This is largely a practical course intended for those who are not prepared, academically, to enter the four-year course. On the completion of this course a young man is fitted for a position as machinist, draughtsman, stationary engineer, or to fill similar positions.

SUBJECTS OF INSTRUCTION.

First Year.

Mechanical Drawing.—Work in the use of the pencil; technical sketches of objects, usually parts of a machine; use of instruments, and tracing; geometric drawing, isometric and cabinet drawing, elementary projections, drawings made to scale from working sketches of pieces of a machine. Elementary principles of descriptive geometry, cylinders, cones, and prisms, intersections, development of surfaces. Miscellaneous problems. Four periods. Mr. VAUGHAN.

Woodwork.—Use of bench tools, working from drawings, lining, sawing, planing. Practice in making simple exercises in wood. Elementary exercises in wood-turning. Three periods. Mr. CLAY.

Forge-work.—Exercises in working with iron. Welding. Uses and care of forge tools and fires. Two periods. Mr. WHEELER.

Foundry.—Recitations and exercises in foundry work, including molding, core-making, the management of the cupola furnace and the crucible furnace in iron and brass melting. Two periods. Mr. WHEELER.

Mechanical Technology.—Classification and uses of woodworking and forging tools and machines. Methods of woodworking and forging. Arrangement, sizes, and care of belting and shafting. One period. Professor SATTERFIELD.

Arithmetic.—Milne's *Standard Arithmetic*. Begin with decimal fractions and complete the subject. Five periods, first term. Mr. RICHARDSON and Mr. SYKES.

Algebra.—Wells' *New Higher Algebra* to quadratic equations. Five periods, second and third terms. Mr. RICHARDSON and Mr. SYKES.

Preparatory English.—The forms of the language, the spelling and definition of words, the classification and punctuation of sentences, are taught in text-book, in much class-reading and in daily written exercises. The object of this course is to impart the power of interpreting the written page and of expressing ideas in both the spoken and the written word. Three periods. Dr. SUMMEY and Mr. BONN.

Military Drill.—School of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours, first and second terms; two periods, third term. Commandant and Officers of the Battalion.

Second Year.

Mechanical Drawing.—Sketching and drawing of machine parts and machines. Detail working drawings. Tracing and blueprinting. Two periods. Mr. ELLIS.

Machine-shop work may be elected instead. Five additional periods of Mechanical Drawing may be elected.

Machine-shop Work.—Bench and machine work. Exercises in chipping and filing. Exercises in lathe-work, boring, reaming, drilling, planing, milling, and shaper-work. Two periods. Mr. PARK.

Elective Work.—Five additional periods of shop work, either wood shop, machine shop or foundry, may be elected.

Steam and Steam Machinery.—Descriptive study of the machinery of steam power plants—engines, boilers, condensers, pumps, piping. Care and management. Combustion of fuels. Indicators; indicated, brake and boiler horse-power problems. Three periods. Professor SATTERFIELD.

Algebra.—Wells' *New Higher Algebra*. Begin with quadratic equations and complete logarithms, embracing ratio and proportion, variation, the progressions, the binomial theorem, series and partial fractions. Five periods, first term; two periods, second term. Mr. RICHARDSON and Mr. J. A. PARK.

Geometry.—Wentworth's *Plane and Solid Geometry*. Plane Geometry. Two periods, second term; five periods, third term. Professor YATES, Mr. RICHARDSON, and Mr. J. A. PARK.

Drill.—School of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours, first and second terms; two hours, third term. Commandant and Officers of the Battalion.

TEXTILE COURSES.

- VIII. The Four-year Course in Textile Industry.**
VIIia. The Two-year Course in Textile Industry.

THE TEXTILE DEPARTMENT.

The Textile Department, which is a typical cotton mill, is fully equipped with all the necessary machinery for instruction in manufacturing cotton yarns and fabrics from the bale to the finished product. The student is taught the theory of cotton spinning, weaving, designing, and dyeing. In connection with the theory, he learns the practical operation of the cotton machinery used in carrying on the different processes. Further, he learns such essential practical details as enable him to adjust and fix the machinery so as to produce the proper results. As a result of this training, each student produces for himself cotton yarns of different numbers, cotton fabrics of different kinds from his own designs and choice of colors.

TEXTILE INSTRUCTION.

In this department two courses of instruction are offered, the four-year course leading to the degree of Bachelor of Engineering, and the two-year course in carding and spinning, weaving, designing, and dyeing.

Four-year Course.

The four-year course offers complete facilities for full instruction in all branches of cotton-mill work. Practical training in textile work begins in the Freshman year and forms a part of the work in each of the following years. The combination of practical with theoretical training is begun in the Sophomore year and continues in the Junior and Senior years. The theoretical work is directly related to the practical work going on, and this combination offers the best means for studying cotton-mill work and its operations.

Two-year Course.

The two-year course is offered to students who cannot spend the time required for the four-year course, or who have had practical experience in the mill and wish to avail themselves of our facilities for giving special instruction in textile work.

TEXTILE BUILDING AND EQUIPMENT.

The Textile Building is located on the west campus. It is a two-story brick building one hundred and twenty-five by seventy-five feet, with a basement. Throughout, its construction is similar to a cotton mill, being an illustration of standard construction in this class of buildings. The basement is fitted up with a laboratory and classroom for instruction in dyeing and with dyeing machinery. On the first floor are located the hand and power looms and the necessary warp-preparation machinery. The carding and spinning machinery is located on the second floor. Electricity is used as motive power, the machinery of each department in the building being driven by a separate motor. The machinery equipment consists of the latest types of cotton-mill machinery manufactured by American builders. The following is a list of the machines and their makers:

Carding Department.

Opening Room.—One combination opener and breaker lapper, made by Kitson Machine Co., Lowell, Mass. One 40-inch single beater finisher lapper, with patent carding beater, made by Kitson Machine Co., Lowell, Mass.

Carding Room.—One 40-inch revolving flat card, 112 flats, with coiler, made by Mason Machine Works, Taunton, Mass. One 40-inch revolving flat card, 110 flats, with coiler, made by Whitin Machine Works, Whitinsville, Mass. One 40-inch revolving flat card, 110 flats, with coiler, made by Saco and Pettee Machine Shops, Newton Upper Falls, Mass. One single railway head, with coiler, leather rolls, made by Whitin Machine Works, Whitinsville, Mass. One drawing frame, four deliveries, leather rolls, made by Whitin Machine Works, Whitinsville, Mass. One railway head, with coiler, metallic rolls, and improved evenner motion, made by Saco and Pettee Machine Shops, Newton Upper Falls, Mass. One drawing frame, four deliveries, metallic rolls, made by Saco and Pettee Machine Shops, Newton Upper Falls, Mass. One sliver lap machine, one ribbon lap machine and one six-head combing machine, made by Whitin Machine Works, Whitinsville, Mass. One 36-spindle slubber for $11 \times 5\frac{1}{2}$ -inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I. One 48-spindle intermediate roving frame for $9 \times 4\frac{1}{2}$ -inch bobbin, made by Saco and Pettee Machine Shops, Biddeford, Me. One 64-spindle fine roving frame for $7 \times 3\frac{1}{2}$ -inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I. One 80-spindle jack roving frame for $6 \times 2\frac{1}{2}$ -inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I.

Spinning Department.

Spinning Room.—One 64-spindle spinning frame for warp; one 80-spindle spinning frame for filling, made by Whitin Machine Works, Whitinsville, Mass. One 80-spindle spinning frame for warp, one 80-spindle spinning frame for filling, made by Mason Machine Works, Taunton, Mass. One 80-spindle spinning frame for warp, one 80-spindle spinning frame for filling, made by Fales & Jenks Machine Co., Pawtucket, R. I. One 64-spindle spinning frame for warp, one 64-spindle spinning frame for filling, made by Saco and Pettee Machine Shops, Biddeford, Me. One 48-spindle spinning frame, combination build, made by D. A. Tompkins Co., Charlotte, N. C. One 240-spindle mule spinning frame, 1½-inch gauge, made by Asa Lees & Co., Oldham, England.

Spooling, Twisting, and Winding.—One 40-spindle spooler, made by Draper Company, Hopedale, Mass. One 40-spindle spooler, made by Whitin Machine Works, Whitinsville, Mass. One 32-spindle spooler, made by Easton & Burnham, Pawtucket, R. I. One 40-spindle spooler, made by D. A. Tompkins Co., Charlotte, N. C. One 48-spindle twister, made by Whitin Machine Works, Whitinsville, Mass. One 100-spindle wet twister, made by Draper Company, Hopedale, Mass. One 48-spindle twister, one-half for wet, one-half for dry twisting, made by Fales & Jenks Machine Co., Pawtucket, R. I. One 50-spindle reel, one-half live, one-half dead spindles, made by D. A. Tompkins Co., Charlotte, N. C. One 40-spindle reel, made by Draper Company, Hopedale, Mass. One 6-spindle universal winding machine, made by Universal Winding Co., Boston, Mass. One section warper, 400 ends, made by Draper Company, Hopedale, Mass.

Weaving Department.

Warp Preparation.—One 12-spindle bobbin-winding machine, made by Jacob K. Altamus, Philadelphia, Pa. One beaming machine, made by Lewiston Machine Co., Lewiston, Me. One beaming machine, complete, made by the T. C. Entwistle Co., Lowell, Mass.

Looms.—One Northrop-Draper print-cloth loom; two Northrop-Draper sateen looms; one Northrop-Draper loom with 20-harness dobby, made by Draper Company, Hopedale, Mass. Three high-speed sheeting looms, made by Kilburn, Lincoln & Co., Fall River, Mass. One sheeting loom, one 12-harness dobby loom and one 24-harness dobby loom, made by Whitin Machine Works, Whitinsville, Mass. One print-cloth loom, one 2x1 box loom, one 24-harness dobby loom, made by Mason Machine Works, Taunton, Mass. One 4-harness twill loom, made by Lowell Machine Shop, Lowell, Mass. One Crompton

4x1 box gingham loom, one Crompton 4x1 box loom with 20-harness dobby, one Crompton 2 and 1-box loom with 400-hook Jacquard machine, one Knowles Gem loom with 4x4 box, one Stafford single-box loom with 20-harness dobby, made by Crompton & Knowles Loom Works, Worcester, Mass. One single-box loom with 200-hook table-napkin Jacquard machine. One 4 x 1 box table-cover loom with 624-hook Halton Jacquard machine, made by Crompton-Thayer Loom Co., Worcester, Mass. Ten 4 x 4 box hand looms with 30-harness witch-heads for narrow fabrics. Two 4 x 4 box hand looms with 400-hook and 600-hook Jacquard machines, from Thos. Halton's Sons, Philadelphia, Pa.

Knitting.—One full automatic knitting machine, made by George D. Mayo Machine Company, Laconia, N. H. One ribber, made by Scott & Williams, Philadelphia, Pa. One looper, made by Beattie Manufacturing Company, Cohoes, N. Y.

Dyeing Department.

The Dyeing Department is located in the basement of the Textile Building, and consists of an experimental dyeing laboratory with desk room sufficient for thirty students, a lecture-room, a stock-room, an office, and a room seventy by fifty feet which is fitted up to give instruction in practical dye-house work.

The dyeing laboratory is well fitted up with appropriate work tables, and all the necessary apparatus for doing experimental dyeing, dye-testing, color-matching, the testing of dyed samples to light, acids, alkalies, etc., as well as carrying out the various chemical operations necessary in dyeing. The dye-house is equipped with the proper dyeing machinery needed in the dyeing of large quantities of material, and the giving of practical instruction in boiling out, bleaching, dyeing of raw stock, cops, skeins, warps, and piece goods.

The department has a large collection of dyestuffs and color cards. Through the kindness of the various dyestuff dealers and manufacturers the department is regularly supplied with all new dyestuffs and color cards as soon as they are put on the market, thus affording the student ample opportunity to become familiar with the latest methods and products for commercial work. The department is indebted to the following firms for donations of dyestuffs and chemicals:

H. A. Metz & Co., New York.

Badische Company, New York.

Farbenfabriken of Elberfeld Co., New York.

Danker & Marston, Boston, Mass.

Berlin Aniline Works, New York.

Cassella & Co., New York.

Dye-house Equipment.—Seven dye vats; one Roessler & Hasslacher bleaching vat; one Jefferson high-pressure boiling-out kier; one hand-dyeing jigger; one 15-gallon steam jacketed copper kettle; one steam aging box; one Fairmount warp dyeing machine; one Textile Finishing Co.'s warp dyeing machine; one Textile Finishing Co.'s warp sizing machine; one 5-can upright dryer; one small Lightfoot raw stock dyeing machine; one Tolhurst Machine Works hydro-extractor; one Schaum & Uhlinger hydro-extractor; one Mather & Platt cloth printing machine; one Fries warp dyeing machine; one dry closet.

A full equipment of analytical balances and other necessary apparatus for experiment work.

Power and Power Transmission.

One 30-horse-power 3-phase 550-volt motor, made by General Electric Co., for driving carding and spinning machinery.

One 15-horse-power 3-phase 550-volt motor, made by General Electric Co., for driving weaving machinery.

One 10-horse-power 3-phase 550-volt motor, made by Fairbanks-Morse Co., for driving dyeing machinery.

Pulleys, shaftings, hangers, and couplings, made by Jones & Laughlin Co., Ltd., Pittsburg, Pa.

Belting, made by Fayerweather & Ladew, New York City, and Maloney-Bennett Belting Co., Chicago, Ill.

THE FOUR-YEAR COURSE.

DESCRIPTION OF SUBJECTS.

301. Carding and Spinning.—Lectures and recitations; practice in operating card and spinning room machinery. Cotton: classifying the plant; its growth; varieties; ginning; baling and marketing the raw staple. Cotton at the mill; selecting and mixing. Openers and lap-pers; cards, sliver lap machines; ribbon lap machines; combers; rail-way-heads; drawing-frames; slubbers; intermediate; speeders; jacks. Ring spinning-frames and mules. Spoolers. Twisters; reels; cone-winders. Construction and functions of each machine; making the various calculations. Drafts; speed of parts; production. Producing yarns of different counts, single and ply. Testing yarns for breaking strength and elasticity. Text-books: *Cotton Mill Processes and Calculations*, by Tompkins; *Cotton Spinning*, by Nasmith. Required of Freshmen, Sophomores, Juniors, and Seniors. Assistant Professor PARKER.

302. Weaving.—Lectures and practice in warp preparation, operating and fixing looms, cloth-finishing machinery. Warp preparation: pin frame warper; section warper; beam warper; construction of beam warper, stop motion, measuring motion, creel; pattern warp making; long and short chain beamers. Slashing: steam cylinder slasher; hot-air slasher; construction of slasher; creel; cylinder;

immersion roll; squeeze rolls; drying fan; separator rolls; winding yarn on beam; cone drive; slow motion; measuring and cut marking motion. Sizing: construction of size kettle; size mixing and boiling; division of sizing; ingredients; value of ingredients; sizing receipts for light, medium, and heavy sizing. Loom-mounting: reeds and harnesses; drawing in, and putting warps in loom. Looms: hand looms and power looms; construction of plain loom; principal movements in weaving; let-off and take-up motions; filling stop motion; warp stop motion. Cams and their construction. Magazine looms, construction and advantages. Drop box looms: chain building for box looms; changing boxes to have easy-running looms; construction and value of multipliers; timing and fixing box motions. Pick and pick-looms. Box-chain, and multiplier-chain building, arrangement of colors in boxes to give easy-running loom. Ball and shoe-pick motion. Construction and fixing of head motion. Dobby, single and double index; construction and fixing of dobbie; extra appliances necessary for weaving leno, towel, and other pile fabrics. Value of easers; half motion; and jumper attachment for leno. Springs and spring-boxes. Pattern chain building. Jacquard: single and double lift; construction and tie-up. Weave-room calculations; speed and production calculations; relative speed of looms; counts of cotton harness. Finishing: inspection of cloth; singeing and brushing; calendering, tentering; folding and packing for the market. Equipment necessary for warp preparation, weaving, finishing; approximate cost of production of fabrics in the different processes. Text-book: *Weaving, Plain and Fancy*, by Nelson. Required of Freshmen, Sophomores, Juniors, and Seniors in the Four-year Course and of first and second year students in the Short Course. Professor NELSON and Mr. STEED.

303. Textile Designing.—Lectures and practice in designing. Method of representing weaves on design paper. Foundation weaves: plain; twill; satin. Ornamentation of plain weave; color effects on plain weave. Derivative weaves; plain and fancy basket weaves; warp and filling rib weaves. Broken twills; curved twills; corkscrew twills; entwining twills. Granite weaves; satin shading. Combination of weaves: figured weaving on plain ground. Satin and figured stripes on plain ground. Spots arranged in different orders on plain, twill, satin ground. Imitation leno; honeycomb weaves. Bedford cords and combination with other weaves. Wave designs; pointed twills; diamond effects. Plain and fancy piqués. Double plain; figured double plain. Double cloths. Cloths backed with warp; cloths backed with filling. Cloths ornamented with extra

warp; cloths ornamented with extra filling. Cotton velvet. Corduroy. Mamelasse. Leno weaves with one, two, and more sets of doups. Principles of working both top and bottom doups. Combination of plain and fancy weaves with leno. Methods of obtaining leno patterns. Jacquards. Distribution and setting out of figures for geometrical and floral effects. Distributing figures to prevent lines. Areas of patterns. Preparation of sketches. Transfer of sketches to design paper. Painting in the design with different weaves according to sketch. Shading of patterns. Card cutting and lacing. Required of Sophomores, Juniors, and Seniors. Professor NELSON and Mr. STEED.

304. Cloth Analysis and Fabric Structure.—Calculating particulars of cloth from data ascertained from samples. Shrinkages. Lams in patterns; patterns in warp. Drafting and pattern chain building. Reed and harness calculations. Calculations to obtain quantities of warp and filling in stripe and check fabrics. To find number of threads per inch, using a given weight of warp; also number of picks per inch, using a given weight of filling. Yarn calculations. System of numbering woolen, worsted, silk, linen, and cotton yarns. Determination of one system of yarn to that of another. Textile calculations. Determining the number of threads and picks per inch to make a perfect cloth. Calculations to determine the texture in an unequally reeded fabric. Diameter of threads. Balance of cloth. Texture for double cloth. Required of Sophomores, Juniors, Seniors. Professor NELSON and Mr. STEED.

DYEING COURSE.

As the textile industries of the State increase, the need of young men who have been trained in the principles as well as the practice of the different factory operations becomes apparent. In the course in dyeing the student is taught the different practical methods of the dye-house; the chemistry of the dye stuffs, some of each class of which he actually makes; the chemical changes brought about by mordants, assistants, etc. He also learns color matching, dye testing, and the methods for the analysis of the different chemicals used in the dye-house. He carries on the study of carding, spinning, weaving, designing, cloth analysis, etc., to the end of the Sophomore year, with the other textile students, and with them devotes attention to shop-work, drawing, engines, boilers, etc., together with the general studies of English, History, Mathematics, Physics, and General Chemistry, which are required in all the Four-year Courses.

VII. The Four-year Course in Dyeing, leading to the degree of Bachelor of Science.

Freshman Year.

English Literature, 345.....	3	3	3
Military Drill, 359.....	3	3	2
German, 348.....	3	3	3

DESCRIPTION OF SUBJECTS.

306. Dyeing.—With the microscope and other testing apparatus the student makes a careful study of the various fibers used in the textile industry. He also studies the chemical and physical properties of these fibers; the action of acids, alkalies, heat, moisture, and the various other agencies to which fibers are liable to be subjected. He next takes up the study of the fundamental principles which underlie the arts of bleaching and dyeing, such as the boiling out and bleaching of cotton, and the chemical reactions involving each step. The adaptability of water for bleaching and dyeing, followed by the theories of dyeing. Substantive dyestuffs and their application to cotton. After-treatment of direct dyestuffs, including diazotising and developing

and the topping with basic dyestuffs. The application to cotton of basic dyestuffs, acid dyestuffs, mordant dyestuffs, including a study of the various mordants and their fixation with metallic salts. Dyeing with sulphur dyestuffs, indanthrenes, indigo, natural and artificial, aniline black, turkey red, and the insoluble azo colors developed on the fiber. The methods of bleaching and dyeing of linen, jute, ramie, and other vegetable fibers. The scouring and bleaching of wool. The carbonization and chlorination of wool. The application of basic, acid, chrome, eosine, and direct colors to wool. Dyeing wool with logwood, fustic, and other natural dyewoods. Methods of the making and dyeing of artificial silk. The boiling off, bleaching and dyeing of natural silk. Study of the chemical and physical changes which take place during mercerization; also the methods of dyeing mercerized goods. The use of the various kinds of machines used in bleaching and dyeing. The dyeing of raw-stock, skeins, cops, warps, piece goods, hosiery, underwear, and unions. The science of color-mixing. Color-matching on textiles. The use of the tintometer and colorimeter. Calico printing, including the various methods of preparing the various pastes, thickening agents, mordants and assistants used in printing. Quantitative analysis of mixed yarns, and fabrics composed of cotton, wool, and silk. The testing of dyestuffs for their shade, tinctorial power, and leveling properties. Comparative dye trials to determine money value. Testing for mixtures. The reactions of acids, alkalies and reducing agents on several samples taken from the different classes of dyestuffs.

The course of lectures, as outlined above, will include the consideration of many difficult problems that arise in the dye-house, with especial reference to the dyeing, mercerizing, and finishing of cotton yarns and pieces. Required of Juniors and Seniors in Textile Industry. Mr. HALSTEAD.

307. Dyeing Laboratory.—A series of experiments is performed which covers all the subjects taken up in the lecture course, and includes a large amount of work done in the laboratory and dye-house. Special stress is put on the matching of colors and the dyeing of sulphur and indanthrene dyestuffs. Each student is required to bleach and dye a large number of samples of yarn and cloth on a small scale, and is required to mount specimens of his work in a scrap-book. At the discretion of the instructor in charge, the class bleaches and dyes larger quantities of raw-stock, cloth, and yarn in the dye-house, as well as prints samples on the laboratory printing machine. This work will be supplemented by visits to the mills which do dyeing in the city of Raleigh. Required of Juniors and Seniors in Textile Industry. Mr. HALSTEAD.

CHEMISTRY.*

309. Inorganic Chemistry.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and Doctor WILLIAMS.

310. Inorganic Chemistry.—Laboratory work. Remsen's *Chemical Experiments*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. HILL.

311. Organic Chemistry.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Three periods. Required of Juniors in Dyeing. Professor WITHERS.

312. Analytical Chemistry.—Treadwell's *Qualitative Analysis*. A discussion of the principles involved in chemical analysis, together with laboratory work. The student is taught to detect the presence of the common metallic elements, as well as that of the acids, in unknown substances. Seven periods, first term. Required of Juniors in Dyeing. Doctor WILLIAMS.

313. Analytical Chemistry.—Treadwell's *Quantitative Analysis*. Gravimetric and volumetric analysis, special attention being given to the analysis of substances of technical importance. Seven periods, second and third terms. Required of Juniors in Dyeing. Seven periods. Required of Seniors in Dyeing. Doctor WILLIAMS.

314. Organic Chemistry.—Laboratory work. Gattermann's *Practical Methods of Organic Chemistry*, translated by Shober. The typical transformations and syntheses of the aliphatic and aromatic groups are taken up. The student thus becomes familiar with the reactions and properties of the more important organic compounds. One of each of the more important classes of dyestuffs is prepared and the properties studied. Four periods. Required of Seniors in Dyeing. Doctor SYME.

315. Industrial Chemistry.—Thorpe's *Outlines of Industrial Chemistry*. A discussion of the processes and principles involved in the more important chemical industries. A discussion of the materials of engineering. Three periods. Required of Seniors in Dyeing. Professor WITHERS.

*For further information, see course in Chemistry.

MECHANICAL ENGINEERING.*

317. Mechanical Drawing.—Work in the use of the pencil; technical sketches of objects, usually parts of a machine. Geometric drawing; isometric and cabinet drawing; elementary projections; drawings made to scale from working sketches of pieces of a machine; elementary principles of descriptive geometry; cylinders, cones, and prisms; intersection and development of surfaces; miscellaneous problems. Two periods. Required of Freshmen. Mr. VAUGHAN.

320. Woodwork.—Use of bench tools; working from drawings, lining, sawing, planing; practice in making simple exercises in wood-turning. Two periods. Required of Freshmen. Mr. CLAY.

321. Forge-work.—Exercises in working with iron, welding; use and care of forge tools and fires. Two periods, first and second terms. Required of Freshmen. Mr. WHEELER.

322. Foundry.—Recitations and exercises in foundry work, including molding, core making, the management of the cupola furnace and the crucible furnace in iron and brass melting. Two periods. Required of Freshmen, third term. Mr. WHEELER.

324. Machine-shop Work.—Bench and machine work. Exercises in chipping and filing. Exercises in lathe work, boring, reaming, drilling, planing, milling, and shaper work. Two periods. Required of Textile Seniors. Mr. PARK.

326. Steam Engines and Boilers.—A study of the structural details of modern steam engines; the slide valve, both in its simple form and when used in combination with independent cut-off valves; link motion and other reversing gears; and the Zeuner diagram. Attention is given to the effect of the reciprocating parts and a study of inertia and tangential pressures; also a study of the steam-engine indicator, of indicator rigging, and of steam distribution as disclosed by the indicator.

The various forms of steam boilers are studied, and the methods employed in their construction noted. The number and size of tubes and flues, the thickness of plates, strength of different styles of riveting, kinds of bracing, amount of grate and heating surface, different kinds of steam and water gauges, safety valves and injectors; the causes and methods of preventing foaming, incrustation and corrosion; the manner of setting boilers, and of operating them with safety and economy; feed-water heaters; mechanical stokers; smoke-consumers and chimneys are studied in detail. Two periods. Required of Juniors in Textile Industry. Professor SATTERFIELD.

*For full information, see course in Mechanical Engineering.

PHYSICS.†

331. Elementary Physics.—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Two periods. Required of Freshmen. Mr. TRUITT.

MATHEMATICS.

335. Algebra (Continued).—Wells' *New Higher Algebra*. Begin with quadratic equations and complete compound interest and annuities, embracing ratio and proportion, variation, the progressions, the binomial theorem, undetermined coefficients and logarithms. Five periods, first term; three periods, second term. Required of Freshmen. Professor YATES, Mr. RICHARDSON, and Mr. J. A. PARK.

336. Geometry.—Wentworth's *Plane and Solid Geometry*. Plane Geometry. Two periods, second term; five periods, third term. Required of Freshmen. Professor YATES, Mr. RICHARDSON, and Mr. J. A. PARK.

337. Solid Geometry.—Required of Sophomores. Five periods, first term. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

338. Advanced Algebra.—Wells' *New Higher Algebra*. Permutations, combinations, continued fractions, summation of series, general theory of equation, and the solution of higher equations, etc. Required of Sophomores. Three periods, second term. Professor YATES and Mr. RICHARDSON.

339. Trigonometry.—Wells' *Plane and Spherical Trigonometry*. Plane Trigonometry. Solution of plane triangles, triangulation, etc. Spherical Trigonometry. Solution of Spherical triangles. Required of Sophomores. Two periods, second term; five periods, third term. Professor YATES, Mr. J. A. PARK, and Mr. RICHARDSON.

ENGLISH.

341. Composition and Rhetoric.—After a review of grammatical principles, especial attention is given to the selection of subjects and the planning of essays, to the choice of words, and to the structure of sentences and paragraphs. Standard poetry and prose are read in class, and additional books are assigned for parallel reading. Frequent short themes are written. Three periods. Required of Freshmen. Professor HARRISON, Doctor SUMMEY, and Mr. BONN.

†For full information, see course in Electrical Engineering.

342. American Literature.—The study of the history of American literature is accompanied with the reading and analysis in class and as parallel of the writings of representative American authors. Essays are based largely upon the class reading. Three periods. Required of Sophomores. Professor HARRISON, Doctor SUMMEY, and Mr. BONN.

343. Advanced Rhetoric.—The principles of style and the forms of discourse constitute the basis of the work. Illustrative prose is studied in class, and in frequent essays and themes the students put into practice the principles learned. Two periods, first and second terms. Required of Juniors. Professor HARRISON.

344. Public Speaking.—The principles governing the preparation and the delivery of public addresses are given in text-book and in lectures. The reading in class of addresses in various styles, the writing of several papers by each member of the class, and practice in delivery, complete the work. Two periods, third term. Required of Juniors. Professor HARRISON.

345. English Literature.—The inductive study of the development of English poetry and prose is pursued in the works of standard writers of the different periods. The continuity is emphasized by a text-book on the history of the literature. Occasional essays and parallel reading form an important part of the work. The purpose of the course is to cultivate in the student a taste for the best writings of the greatest writers. Three periods. Elective for Seniors. Professor HARRISON.

MODERN LANGUAGES.

The aim of the department is to enable one to use a limited vocabulary for practical purposes in speaking and writing fluently simple sentences without idiomatic expressions or difficult constructions, and to read scientific works, and to know the meaning of difficult constructions and idiomatic expressions of the foreign language.

A unilingual method is used, based on conversation, humoristic anecdotes, interesting short stories and scientific articles. The student is taught to think in the foreign language by a direct association of thoughts with foreign expressions without the medium of English. The meaning and fluent use of foreign expressions are taught by a direct appeal to real objects, gestures, pictorial illustrations, cognates, context, comparisons, contrasts, and associations, beginning with leading simple questions, and gradually progressing to more advanced ones, frequent repetitions and a strict adherence to the rule that answers be always given in complete short sentences of the foreign language, and never by "yes," "no," or some other short word alone.

Grammatical and lexical details for the thorough understanding of the lessons are given. The rules are deduced from the examples, and the student is trained in their correct use by interesting connected matter.

Written examinations consist of translations from English into the foreign language and of questions and answers in the foreign language. No English appears in an examination paper. No time is allowed for hesitancy. Answers are spoken fluently and written rapidly.

Instruction is given three hours per week.

Students may elect German during the Junior or Senior year. The work is optional, but credit towards a degree is allowed for the successful completion of the work. Work begun and continued a month may not be dropped without consent of the Faculty.

The languages taught are German and French.

348. German.—Worman's *Modern Languages*, first and second German books; *Studien und Plaudereien*, first and second books; Fischer's *Practical Lessons in German*; *Practical German Grammar*, by Calvin Thomas; *German Reader*, by Fischer; *Scientific Reader*. Elective for Juniors and Seniors. Doctor RUDY.

349. French.—Worman's *Modern Languages*, first and second French books; Worman's *Grammaire Française*; selected short stories of French literature, and scientific readers. Doctor RUDY.

This subject may be taken by special petition to the Faculty.

POLITICAL ECONOMY.

353. This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. One period. Required of Juniors. Doctor SUMMEY.

MILITARY SCIENCE.

359. Drill.—School of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours, first and second terms; and two periods, third term. Required of all classes except Seniors. Seniors are to either take drill or three extra hours in some other subject instead. Commandant and Officers of the Battalion.

360. Tactics.—Theoretical instruction in Infantry Drill, Field Service, Army Regulations, Guard Duty, and Target Practice. One period. Required of Juniors. Lieutenant YOUNG.

TWO-YEAR COURSE.

The two-year course is offered to students who cannot spend the time required for the four-year course, or who have had practical experience in the mill and wish to avail themselves of our facilities for giving instruction in textile work.

VIIIa. The Two-year Course in Textile Industry.**First Year.**

DESCRIPTION OF SUBJECTS.

Carding and Spinning.—Lectures and recitations; practice in operating card and spinning room machinery. Cotton: classifying the plant; its growth; varieties; ginning, baling and marketing the raw staple. Cotton at the mill; selecting and mixing. Openers and lap-pers: cards; sliver lap machines; ribbon lap machines; combers; rail-way-heads; drawing-frames; slubbers; intermediate; speeders; jacks.

Ring spinning-frames and mules. Spoolers. Twisters; reels; cone-winders. Construction and functions of each machine; making the various calculations. Drafts; speed of parts; production. Producing yarns of different counts, single and ply. Testing yarns for breaking strength and elasticity. Text-books: *Cotton Mill Processes and Calculations*, by Tompkins; *Cotton Spinning*, by Nasmith. Required of first and second year students. Assistant Professor PARKER.

Weaving.—Lectures on construction of plain, twill, sateen, gingham, pick, and pick looms are given, also construction of dobbies and jacquards.

Lectures begin with the construction of plain loom, first taking up the principal movements in weaving, then the various secondary or auxiliary movements, and the relation and timing of one movement to another. Additional motions and parts required to be added to a plain loom in order to weave twill and sateen cloths. Magazine looms; construction and advantages. Drop box looms; construction of the various motions; arranging colors in boxes; methods of building box chains. Dobby; construction of single and double index; setting, and starting up dobbie on loom; fixing dobbie. Pick and pick looms; construction of loom; construction of head motion; building box chains to have easy-running loom. Jacquard: single and double lift; construction and tie-up. Weave-room calculations for speed and production; counts of reed and cotton harness. Finishing; cotton fabrics. Necessary equipment for warp preparation, weaving, finishing; approximate cost of production of fabrics in the different processes. Text-book: *Weaving, Plain and Fancy*, by Nelson. Required of first and second-year students. Professor NELSON and Mr. STEED.

Textile Designing.—Lectures and practice in designing. Method of representing weaves on design paper. Foundation weaves; plain; twill; satin. Ornamentation of plain weave; color effects on plain weave. Derivative weaves; plain and fancy basket weaves; warp and filling rib weaves. Broken twills; curved twills; corkscrew twills; entwining twills. Granite weaves; satin shading. Combination of weaves; figured weaving on plain ground. Fancy satin and figured stripes on plain ground. Spots arranged in different orders on plain, twill, satin ground. Imitation leno; honeycomb weaves. Bedford cords and combination with other weaves. Wave designs; pointed twills; diamond effects. Cloths backed with warp; cloths backed with filling. Cloths ornamented with extra warp. Cloths ornamented with extra filling. Combination of plain and fancy weaves. Practical application of weaves to fabrics. Advanced designs. Required of first and second year students. Professor NELSON and Mr. STEED.

Cloth Analysis and Fabric Structure.—Calculating particulars of cloth from data ascertained from samples. Shrinkages. Dents in patterns; patterns in warp. Draughting and pattern chain building. Reed and harness calculations. Calculations to obtain quantities of warp and filling in stripe and check fabrics. To find number of threads per inch, using a given weight of warp; also number of picks per inch, using a given weight of filling. Yarn calculations. System of numbering woolen, worsted, silk, linen, and cotton yarns. Determination of one system of yarn to that of another. Textile calculations. Determining the number of threads and picks per inch to make a perfect cloth. Calculations to determine the texture in an unequally reeded fabric. Diameter of threads. Balance of cloth. Texture for double cloth. Required of first and second-year students. Professor NELSON and Mr. STEED.

MECHANICAL ENGINEERING.*

Mechanical Drawing.—Work in the use of the pencil; technical sketches of objects, usually parts of a machine. Geometric drawing; isometric and cabinet drawing; elementary projections; drawings made to scale from working sketches of pieces of a machine. Elementary principles of descriptive geometry; cylinders, cones, and prisms; intersection and development of surfaces; miscellaneous problems. Two periods. Required of first-year students. Mr. VAUGHAN.

Forge-work.—Exercises in working with iron, welding; use and care of forge tools and fires. Two periods. Required of first-year students.

MATHEMATICS.*

Arithmetic.—Milne's *Standard Arithmetic*. Begin with decimal fractions and complete the subject. Five periods, first term. Required of first-year students. Mr. RICHARDSON and Mr. SYKES.

Algebra.—Wells' *New Higher Algebra*. Up to quadratic equations. Five periods, second and third terms. Required of first-year students. Mr. RICHARDSON and Mr. SYKES.

Preparatory English.—The forms of the language, the spelling and definition of words, the classification and punctuation of sentences, are taught in text-book, in much class reading and in daily written exercises. The object of this course is to impart the power of interpreting the written page and of expressing ideas in both the spoken and the written word. Required of first-year students. Three periods. Doctor SUMMEY and Mr. BONN.

*For full information, see course in Engineering.

Drill.—School of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours for first and second terms; two hours, third term. Required of first and second year students. Commandant and Officers of the Battalion.

ADDITIONAL SUBJECTS IN THE SECOND YEAR.

Warp Preparation.—Lectures on construction of warp preparation machinery, spooler; section warper, ball warper; size kettle; slasher. Practice in operating machines. Laying out pattern warps for long and short chain beaming. Size mixing and boiling; value of ingredients used in sizing; sizing receipts for light, medium, and heavy sizing. One period, third term. Required of second-year students.

Dyeing.—The object of this course is to give the student a sound practical knowledge of the fundamental principles which underlie the arts of bleaching, dyeing, mercerizing, etc., of cotton yarns and fabrics. The manipulation of the various machines used in bleaching, dyeing and mercerizing is carefully explained. The physical and chemical properties of the material to be dyed receive first consideration, followed by a study of the adaptability of water for bleaching, dyeing, mordanting, etc. The practical application of the dyestuffs themselves is treated in the most thorough and detailed manner, *e. g.*, the substantive dyestuffs dyed direct, diazotised and developed, after-treated with metallic salts, topped with basic dyes, etc., the basic dyestuffs, sulphur dyestuffs, indanthrene dyestuffs, etc. Practice in color-mixing and matching is given. The student in this way acquires a collection of several hundred dyed samples which, when mounted in his pattern book, serve as a valuable reference. The course is supplemented by lectures, which will include the consideration of many difficult problems that arise in the dye-house. Three periods. Required of second-year students. Mr. HALSTEAD.

Machine-shop Work.—Bench and machine work. Exercises in chipping and filing. Exercises in lathe work, boring, reaming, drilling, planing, milling, and shaper work. Two periods. Required of second-year students. Mr. PARK.

Composition and Rhetoric.—After a review of grammatical principles, especial attention is given to the selection of subjects and the planning of essays, to the choice of words, and to the structure of sentences and paragraphs. Standard poetry and prose are read in class, and additional books are assigned for parallel reading. Frequent short themes are written. Three periods. Required of second-year students. Professor HARRISON, Doctor SUMMEY, and Mr. BONN.

NORMAL COURSES.

I. For Rural Teachers:

- (a) Two-year Course.
- (b) One-year Course.
- (c) A Two-weeks Spring Course.

II. For City Teachers:

- (a) Two-year Course.
- (b) One-year Course.
- (c) A Two-weeks Spring Course.

The Normal Courses are intended for the education of teachers, both men and women, chiefly along industrial lines. Industrial education, particularly in agriculture, is being introduced into our public schools, and the College has a constant demand for teachers well trained in these subjects. It is hoped by means of the Normal Courses to help supply this demand. Our School Law already requires agriculture to be taught in the public schools, and manual work will doubtless be added.

The Courses for Rural Teachers are devoted largely to agriculture and nature study; the Courses for City Teachers, to drawing and manual training. Each of these courses also includes a review of other public-school studies.

Persons already engaged in teaching may, at slight expense of time and money, by means of the short course, or May School, make themselves proficient in one or more industrial lines. Persons preparing to teach may take the full courses, and thus become proficient not only along industrial lines, but also in the other public-school branches and in one or more sciences, or in higher mathematics and English. The industrial training given is both practical and theoretical, and is arranged with reference to the present needs of the public schools in North Carolina. The exercises in the Normal Courses are the same as in the other courses of the College, except in the May School.

The Normal Courses are as follows:

I. Courses for Rural Teachers.**(a) TWO-YEAR COURSE.****First Year.**

SUBJECTS.	PERIODS A WEEK.		
	1st Term.	2d Term.	3d Term.
Agriculture.....	3	3	3
Nature Study { Plants.....	3	3	3
{ Animals.....	3	3	3
English.....	3	3	3
Mathematics.....	5	5	5
Military Drill.....	3	3	2

Second Year.

Farm Equipment.....	4	--	--
Soils.....	--	4	--
Crops.....	--	--	4
Plant Diseases.....	3	--	--
Physics.....	--	3	--
Botany.....	--	--	3
Mathematics.....	4	4	4
English.....	3	3	3
Drawing.....	2	2	2
History.....	2	2	2
Military Drill.....	3	3	2

(b) ONE-YEAR COURSE.

SUBJECTS.	PERIODS A WEEK.		
	1st Term.	2d Term.	3d Term.
Methods of Teaching Agriculture	2	2	2
Agriculture (general).....	3	3	3
Horticulture.....	3	3	3
Animal Husbandry.....	3	3	3
Dairying.....	5	--	--
Diseases of Live-stock.....	--	5	--
Botany.....	3	--	--
Poultry.....	--	3	3
Entomology.....	--	--	3
Diseases of Plants.....	--	--	2
Agricultural Literature.....	1	1	1

Elective in any College department, *e. g.*, Agricultural Chemistry, Land Surveying, Physics and Physical Laboratory, Drawing, and others.

II. Courses for City Teachers.

(a) TWO-YEAR COURSE.

First Year.

Drawing.....	2	2	2
Woodwork	1	1	1
Forge-work.....	1	1	1
Mechanical Technology.....	1	1	1
Algebra and Geometry	5	5	5
English.....	3	3	3
History.....	2	2	2
Drill.....	3	3	2

Elective, 3 periods required: Physics 2, Nature Study (Plants) 3, Nature Study (Animals) 3.

Second Year.

SUBJECTS.	PERIODS A WEEK.		
	1st Term.	2d Term.	3d Term.
Drawing.....	2	2	2
Woodwork	4	4	4
Forge-work	1	1	1
English.....	2	2	2
Architecture and Descriptive Geometry.....	2	2	2
Architectural Drawing.....	2	2	2
Geometry and Trigonometry	5	5	5
Military Drill.....	3	3	2

Elective, at least 2 periods required: Chemistry 3, Chemical Laboratory 2, Electricity and Magnetism 2, Descriptive Geometry 2, Plant Diseases, Human Physiology, 3, Physiological Botany 3.

(b) ONE-YEAR COURSE.

Drawing.....	3	4	4
Woodwork	4	5	5
Forge-work	2	2	2
Architecture	2	--	--
Architectural Drawing.....	2	2	2
Algebra and Geometry	5	5	5
Military Drill.....	3	3	2

Elective: Physics 2, English (132) 3, English (133 and 135) 2, History 2, Nature Study (Plants) 3, Nature Study (Animals) 3, Chemistry 3, Chemical Laboratory 2, Electricity and Magnetism 2, Plant Diseases 3, Human Physiology 3, Physiological Botany 3, Geometry and Trigonometry 4, Descriptive Geometry 2.

THE MAY SCHOOL FOR TEACHERS.

May 3 to 15, 1909.

Agriculture, Nature Study and Common Branches.—This course is designed to meet the needs of teachers of the public, common and high schools who desire more preparation in Nature Study and Agriculture. Attention is also given to school gardens. The common branches are reviewed. Attendance here meets the legal requirement of attendance at an institute once in each two years.

The laboratories, library, specimens and all other equipment of the College are at the service of students of this course, affording an excellent opportunity for instruction.

The work is so arranged that teachers desiring to devote all of their time to Agriculture and Nature Study can do so, while those teachers wishing to devote part of their time to Agriculture and Nature Study and part to the common branches can pursue this course.

Instruction will be offered in the following subjects, from which election may be made to best meet particular needs:

Elementary Agriculture and Nature Study, Prof. F. L. Stevens.

School Management, Supt. Z. V. Judd.

School Gardens, Supt. F. M. Harper.

Farm Crops, Prof. C. L. Newman.

Farm Animals, Prof. John Michels.

Horticulture, Prof. F. C. Reimer.

Insects, Mr. R. I. Smith.

Poultry, Mr. J. S. Jeffrey.

Arithmetic, English, History, etc., will be taught by the regular instructors of the College.

No fees are charged for this course. Board may be had at \$2.50 a week and lodging at about \$1 a week.

Only a limited number can be accommodated. Rooms must be engaged in advance.

For particulars and reservation, write to

F. L. STEVENS, *Superintendent*,

WEST RALEIGH.

DONATIONS.

To the Chemistry Department.

Standard Oil Company of New York.—A dozen samples representing crude petroleum and the products obtained.

Armour & Co., of Chicago, Ill.—Some samples of fertilizing materials.

To the Textile Department.

George D. Mayo Machine Company, Laconia, N. H.—One full automatic knitting machine.

Scott & Williams, Philadelphia, Pa.—One ribber.

Beattie Manufacturing Company, Cohoes, N. Y.—One looper.

Wildman Manufacturing Company, Norristown, Pa.—One ribber.

Textile Machinery Company, Boston, Mass.—Dunn flyers for roving frame.

To the Department of Entomology.

The Deming Company, Salem, Ohio.—Two Simplex spray nozzles, one triple spraying attachment.

Dayton Supply Company, Dayton, Ohio.—One "Economy" bucket spray pump, with hose, extension rod and nozzles.

Goulds Manufacturing Company, Seneca Falls, N. Y.—One Goulds brass sprayer and bucket, fitted with hose and spray nozzles.

Friend Manufacturing Company, Gasport, N. Y.—Two "Friend" spray nozzles.

F. E. Myers & Bro., Ashland, Ohio.—One "Little Giant" bucket spray pump, with hose and nozzles; four spray nozzles, different patterns.

Bowker Insecticide Company, Boston, Mass.—One glass jar of "Dis-parene" (Arsenate of Lead); one glass jar of Bowker's tree soap; one glass jar of "Pyrox" (insect and fungus combination treatment); one can of Bowker's insect emulsion.

American Horticultural Distributing Company, Martinsburg, W. Va.—One glass jar "Target Brand" scale destroyer; one glass jar "Target Brand" arsenate of lead; one glass jar "Target Brand" Kree Olio; one 10-pound package "Target Brand" Quick Bordeaux.

Mr. Ervin G. Holt.—The following works of Orison Swett Marden: Success Nuggets; Peace, Power and Plenty; Secret of Achievement; Pushing to the Front; Rising in the World, or Architect of Fate; The Optimistic Life; Every Man a King; He Can Who Thinks He Can.

To the Poultry Department.

Cyphers Incubator Company, Buffalo, N. Y.—Electric incubator and brooder, incubator and colony brooder.

Chas. A. Cyphers, Buffalo, N. Y.—Incubator with automatic moisture regulator.

Meter Expert Southern Power Co.		

* Deceased.

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
PAUL COLLINS,	B. S.,	New Haven, Conn.
Chemist Sanderson Fertilizer and Chemical Co.		
WILLIAM PESCU D CRAIGE,	B. S.,	New Orleans, La.
With Peter F. Pescud, Underwriter.		
WILLIAM LOIS CRAVEN,	B. E.,	York, Pa.
Draftsman York Bridge Co.		
FELIX GRAY CRUTCHFIELD,	B. E.,	Winston-Salem, N. C.
Secretary and Treasurer Maynard-Crutchfield Co., Plumbers, etc.		
GEORGE MASLIN DAVIS,	B. E.,	Winston-Salem, N. C.
Chief Draftsman Southbound Railway Co.; also General Manager Winston Tag Machine Co.		
WILLIAM DOLLISON FAUCETTE,	B. E.,	Portsmouth, Va.
Assistant Civil Engineer Seaboard Air Line Railway.		
BENJAMIN OLIVER HOOD,	B. E.,	New York, N. Y.
With F. A. Burdett, Consulting Engineer.		
MARTIN KELLOGG,	B. Agr.,	Gatesville, N. C.
Register of Deeds of Gates County.		
JESSE JULIAN LILES,	B. E.,	Pittsburg, Pa.
Electrical Engineer General Electric Co.		
LEWIS OMER LOUGEE,	B. E.,	Pittsburg, Pa.
Of the firm of George S. Baton & Co., Civil and Mining Engineers.		
CHARLES HARDEN MCQUEEN,	B. E.,	Richmond, Va.
Civil Engineer Atlantic Bitulithic Co.		
WILLIAM FRANKLIN PATE,	B. S.,	Wooster, Ohio.
Assistant Chemist Agricultural Experiment Station.		
EDWARD OSCAR SMITH,	B. E.,	Newport News, Va.
Special Draftsman Newport News Shipbuilding and Dry Dock Co.		
WALTER STEPHEN STURGILL,	B. E.,	Fort D. A. Russell, Wyo.
First Lieutenant Second Field Artillery, U. S. Army.		
BEVERLY NATHAN SULLIVAN,	B. S.,	Winston-Salem, N. C.
Superintendent Winston-Salem Light and Fuel Co.		
CHARLES AUGUSTUS WATSON,*	B. S.,	Raleigh, N. C.
BENJAMIN VADEN WRIGHT,	B. E.,	Laurel, Miss.
Engineer of Bridges and Buildings M. J. & K. C. R. R. Co.		

CLASS OF 1902.

WILLIAM DAVID ROSEMAN,	B. E.,	Rocky Mount, N. C.
Farmer.		
JUNIUS SIDNEY CATES,	B. S.,	Washington, D. C.
M. Agr. 1904. U. S. Department of Agriculture.		
ROBERT BAXTER COCHRAN,	B. E.,	Urbana, Ohio.
Electrical Engineer. Home address, Statesville, N. C.		

* Deceased.

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
JAMES LUMSDEN FEREBEE,	B. E.,	Wilmington, Del.
Resident Engineer Water Department		City of Wilmington.
ROBERT IRVING HOWARD,	B. E.,	Greenville, N. C.
Bookkeeper Water and Light Commission.		
JOHN LUTHER MCKINNON,	B. Agr.,	Laurinburg, N. C.
Farmer.		
LAURIE MOSELEY,	B. E.,	Greensboro, N. C.
Southern Agent Owego Bridge Co.		
VASSAR YOUNG MOSS,	B. E.,	Canonsburg, Pa.
Draftsman Fort Pitt Bridge Works.		
CHARLES ARTHUR NICHOLS,	B. E.,	Muscogee, Indian Ter.
Merchant.		
JAMES LAFAYETTE PARKER,	B. E.,	New York, N. Y.
Assistant Engineer H. C. Keith, Consulting Engineer.		
WILLIAM BENEDICT REINHARDT,	B. E.,	Dawson, Y. T.
Electrician Dawson Electric Light and Power Co., Ltd.		
RUSSELL ELSTNER SNOWDEN,	B. E.,	Moneure, N. C.
Assistant Civil Engineer S. A. L. Railway. Home address, Snowden, N. C.		
JOSEPH PLATT TURNER,	B. E.,	Spray, N. C.
Vice President and Superintendent Lily Mills.		
CLEVELAND DOUGLAS WELCH,	B. E.,	Gastonia, N. C.
Luray Cotton Mills.		

CLASS OF 1903.

WILLIAM NORTON BOGART,	B. E.,	Washington, N. C.
LESLIE MORWOOD BONEY,	B. E.,	Wallace, N. C.
Architect.		
JOHN SAMUEL P. CARPENTER,	B. E.,	Cherryville, N. C.
Superintendent and Director Melville Manufacturing Co.		
WALTER CLARK, JR.,	B. E.,	Raleigh, N. C.
Lawyer.		
JOHN ELLIOT COIT,	B. Agr.,	Tucson, Ariz.
Ph. D. Cornell University. Horticulturist Arizona Experiment Station.		
SUMMEY CROUSE CORNWELL,	B. E.,	Shelby, N. C.
Civil Engineer.		
CHARLES LESTER CREECH,	B. S.,	New York, N. Y.
Manager of New York Office of John W. Fries.		
EUGENE ENGLISH CULBRETH,	B. E.,	Raleigh, N. C.
Bookkeeper E. M. Uzzell & Co., Printers.		
WALTER LEE DARDEN,	B. E.,	Portsmouth, Va.
Civil Engineer Seaboard Air Line Railway, Portsmouth, Va.		

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
JUNIUS FRANKLIN DIGGS,	B. S.,	Rockingham, N. C., R. 1.
	Farmer and Merchant.	
THEOPHILUS THOMAS ELLIS,	B. E.,	Henderson, N. C., R. 4.
	Farmer.	
JOHN DANIEL FERGUSON,	B. E.,	Bladenboro, N. C.
	Civil Engineer and Farmer.	
HUGH PIERCE FOSTER,	B. E.	
	Not heard from. Home address, Nance, Granville County, N. C.	
OLIVER MAX GARDNER,	B. S.,	Shelby, N. C.
	Lawyer.	
LAMAR CARSON GIDNEY,	B. E.,	Shelby, N. C.
JOHN HOWARD GLENN,*	B. E.,	Crowder's Creek, N. C.
EMIL GUNTER,	B. E.,	Oshkosh, Wis.
	Chief Engineer and Electrical Engineer Winnebago Traction Co.	
	Home address, Pierson, Fla.	
EUGENE COLISTUS JOHNSON,	B. E.,	Ingold, N. C.
	Sawmilling.	
JAMES MATTHEW KENNEDY,	B. E.,	Raleigh, N. C.
	Architect.	
BENNETT LAND, JR.,	B. E.,	Jacksonville, Fla.
	Division Engineer Seaboard Air Line Railway.	
JOHN THOMAS LAND,	B. E.,	Norfolk, Va.
	Civil Engineer with E. C. Foreman and J. T. Land.	
EDMOND SHAW LYTCH,	B. E.,	Mulberry, Fla.
	Electrical Engineer Prairie Pebble Phosphate Co.	
JESSE JOHN MORRIS,	B. E.,	Norfolk, Va.
	Civil Engineer Norfolk and Southern Railroad. Not heard from.	
DAVID STARR OWEN,	B. E.,	Fayetteville, N. C.
	Superintendent Standard Turpentine Co.	
JOHN HARVEY PARKER,	B. E.,	Savannah, Ga.
	Secretary-Treasurer Pepsi-Cola Bottling Co.	
JOEL POWERS,	B. E.,	Goldsboro, N. C.
	Draftsman Dewey Bros.	
EDWARD HAYS RICKS,	B. E.,	Enfield, N. C.
	Machinist Baldwin Locomotive Works.	
GASTON WILDER ROGERS,	B. E.,	Raleigh, N. C.
	C. E. 1905. Civil Engineer Seaboard Air Line Railway.	
CHARLES BURDETTE ROSS,	B. E.,	Charlotte, N. C.
	Contractor.	
JOHN HOUSTON SHUFORD,	B. S.,	Knoxville, Tenn.
	Technical Representative and Salesman Berlin Aniline Works.	
EDWARD ROE STAMPS,	B. E.,	Macon, Ga.
	Superintendent F. S. Royster Guano Co.	

* Deceased.

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
GEORGE YATES STRADLEY.	B. E.,	Roanoke, Va.
Structural Draftsman Virginia Bridge and Iron Company.		
CHARLES EDWARD TROTTER.	B. S.,	Baltimore, Md.
Medical Student Johns Hopkins University.		
JONATHAN WINBORNE WHITE.	B. S.,	State College, Pa.
Assistant Chemist Agricultural Experiment Station.		
EDWIN SEYMOUR WHITING.*	B. E.,	Hamlet, N. C.

CLASS OF 1904.

NELSON ADAMS,	B. E.,	McColl, S. C.
Farmer.		
HAYWOOD LEWIS ALDERMAN.	B. E.,	Panama, R. P.
Assistant Engineer Panama-American Corporation.		
EUGENE CLEVELAND BAGWELL.	B. E.,	Hull, Fla.
General Superintendent Charlotte Harbor and Northern Railway.		
EDWARD PAR BAILEY.	B. E.,	Wilmington, N. C.
President and Manager Wilmington Iron Works.		
JAMES CLAUDIUS BARBER,	B. E.,	Barber, N. C.
Farmer.		
WILLIAM WALTER BARBER.	B. E.,	Barber, N. C.
Farmer.		
WILLIAM ALEXANDER BARRETT.	B. E.,	Missoula, Mont.
Chief Engineer Missoula Light and Power Co.		
Home address, White Store, N. C.		
TIMOTHY ELDRIDGE,	B. E.,	Mt. Olive, N. C.
Superintendent Electric Light Plant.		
JAMES WILLIAM FARRIOR.	B. E.,	Schenectady, N. Y.
General Electric Company, Testing Department.		
WILLIAM WALTER FINLEY.	B. S.,	North Wilkesboro, N. C.
Farmer and Breeder of Registered Percheron Horses.		
GEORGE WASHINGTON FOUSHEE.	B. E.,	Gibsonville, N. C.
Mineola Manufacturing Company.		
EDGAR WILLIAM GAITHER,	B. S.,	Wooster, Ohio.
Assistant Chemist Ohio Agricultural Experiment Station.		
PAUL STIREWALT GRIERSON.	B. E.,	Newport News, Va.
Electrician in charge Charles Cory & Son, New York.		
JOSEPH PERRIN GULLEY, JR.,	B. E.,	Philadelphia, Pa.
Meterman Philadelphia Electric Light Co.		
JARVIS BENJAMIN HARDING.	B. E.,	Guadalupe Jalisco, Mex.
Locating Engineer Southern Pacific Railway. Home address, Greenville, N. C.		

* Deceased.

<i>Name.</i>	<i>Degree.</i>	<i>Address.</i>
GEORGE HERBERT HODGES, Engineer H. C. Frick Coke Co.	B. E.,	Scottdale, Pa.
JESSE McRAE HOWARD, Assistant Superintendent Gibson Manufacturing Co.	B. E.,	Concord, N. C.
BRANTON FAISON HUGGINS, Central Georgia Land and Lumber Co.	B. E.,	Macon, Ga.
HILL McIVER HUNTER, Assistant Purchasing Agent Proximity Manufacturing Co. and White Oak Mills.	B. E.,	Greensboro, N. C.
